The Youtube video is uploaded so I hope y'all enjoy that. Just a recording of the trade from today. I hope you find this EOD post helpful to seeing bigger picture structures. Have a great day everybody I'll see y'all tomorrow.

Have a great day everybody. I hope this EOD post helps you see the bigger picture easier. I need to take off tomorrow as I'm about to leave town and I need to get ready. You'll still get the members Friday review, so dont worry about that, it will just be over todays price action as well as yesterdays.

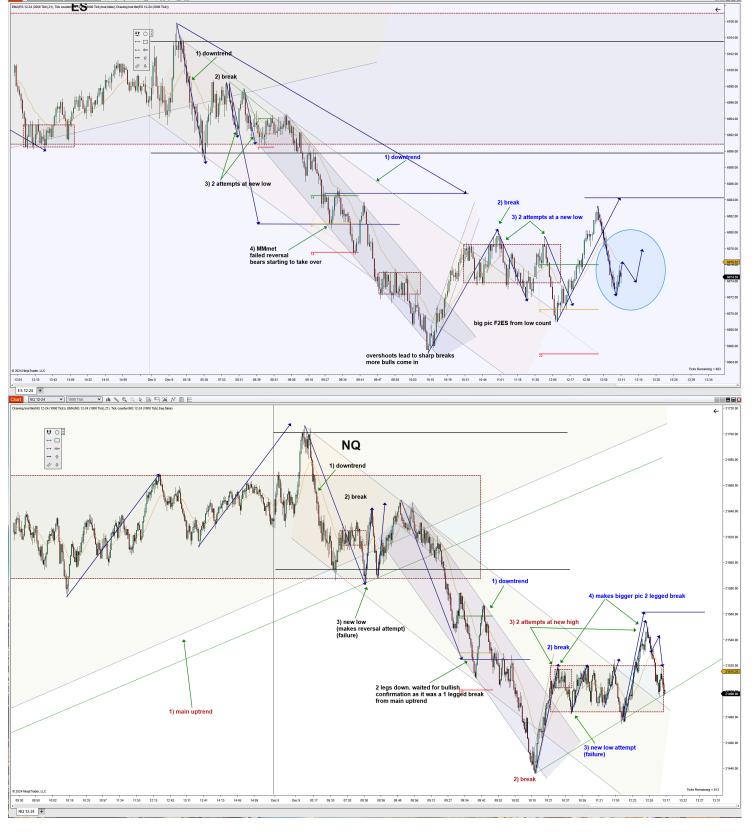

Today was pretty slow again, especially for the ES. Price met a MM at the OVL. I weasn't focused when it took off, but with how slow the market currently is, I wouldn't want to buy into the EMA and trendline. It looks good to ride up to the trendline, but with how slow it is, after price starts chopping and clearly rejecting the EMA, it'd be best to get out at BE. I'm not entering at this point, price clearly doesn't have enough bulls on board to take off swiftly and it's been in this tiny chop for like 40 minutes now.

Have a great day everybody. The YT video is uploading right now. Today felt a bit slow in the 2nd half but still a good trading day. I'd like to get as many good days in as possible before it starts getting slow as we progress through december. Generally that's how it goes. Have a great day everybody, I'll see y'all tomorrow.

Have a great day everybody. I know there's a couple questions in the comments from my posts from today, I will get to those later. I hope you had a great trading day y'all. I'll see you tomorrow.

Have a great day everybody. YT video is uploading right now, I hope you find it useful as well as entertaining. I'll see y'all tomorrow.

Price reacted well to that upMM on the NQ. Could push into a F2EL after fading the range. A good one would include 2 attempts at a new high for the uptrend.

Price made a good MM reaction on the NQ. Could make a couple legs down retesting the range low/OVL for a long to continue higher with a 2nd leg up. Anyway, I'm done for the day. Hopefully the market picks up, been a bit slow lately. It's December now so it can be slow due to the holidays, especially in the 2nd half of of the month. Have a great day everybody.

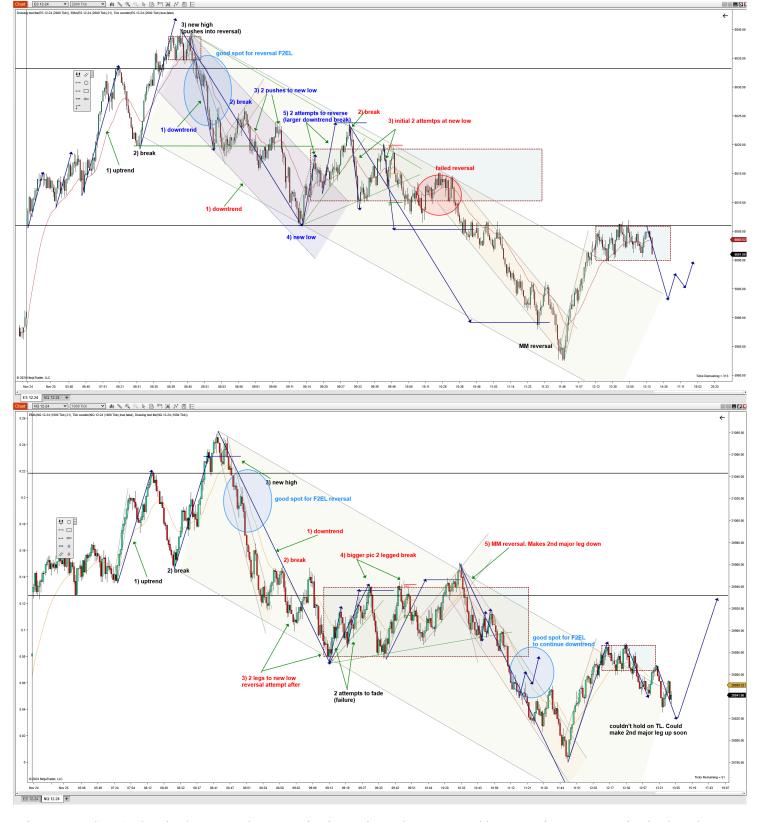

Overall today felt like price was moving pretty slow on both markets. Couple good ones, only got into 1 myself. One just occured on the ES that looks good, it's in the post here. I did record the trade I took and did other commentary and am currently uploading the YT video. Not the normal kind of review. Enjoy this EOD post, I'll see y'all tomorrow!

We could get something very soon on the NQ. Price reached the range low and if we get a good reaction way could get a long entry soon. Could push up into a F2ES and hold above the EMA. Have a great day everybody I'll see y'all tomorrow. YT video is uploading.

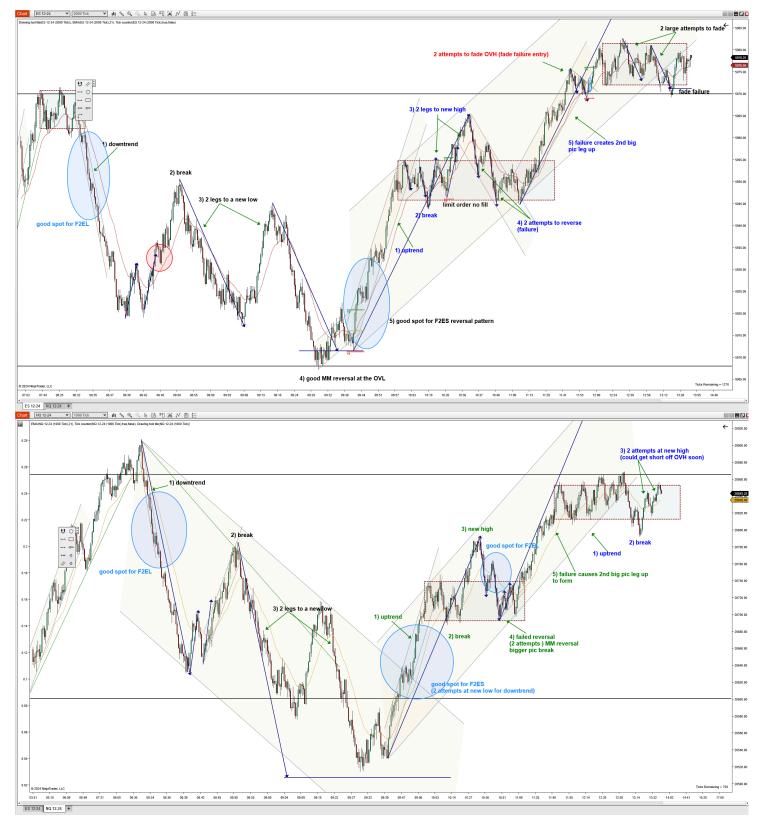

Hey everybody. I hope you enjoy this EOD post. Tomorrow is Thanksgiving so there will be no trading. Friday is a partial trading day. Will likely be slow, but I'm still gonna see how price moves on Friday. If it's really slow I might just take Friday off too. Have a great day everybody.

Price may make a 2nd major leg up on the NQ. Price is nearing a downMM and has an active upMM. Price is chopping around that downtrend line, but if it pushes out could make a F2ES stemming from the current low swing, for a long to reach the upMM. Have a great day everybody, I'll see y'all tomorrow.

The Friday review is uploading now. Enjoy this EOD post y'all. Today was a good day I hope it was for all of you too. Have a good weekend everybody, I'll see y'all on Monday.

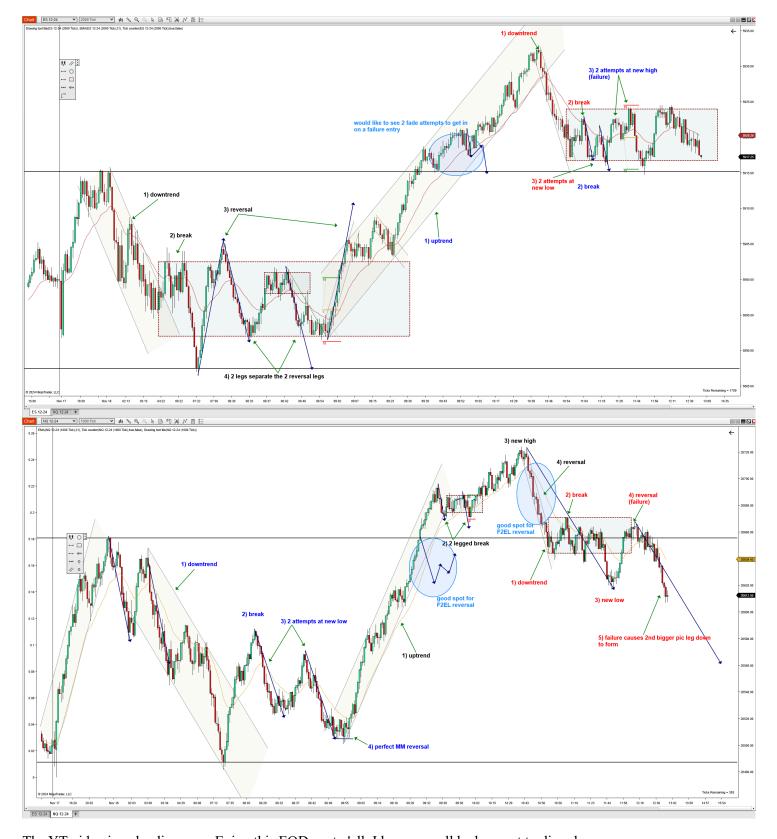

Couple good trades on the ES. Also a no fill. We could get something soon on the NQ as the uptrend has a break and price is making a couple attempts at a new high (1 leg on bigger pic). Could get a short off the OVH as it would be a fade of the dotted range as well after the 2 attempts at a new high for the uptrend.

We could get a couple legs down soon on both markets. I'd like to see 2 legs to the KEP on the ES as this trend is very consistent and if we get 2 attempts to fade, we can look to enter on the failure which fits with the uptrend. Have a great day everybody.

Have a great day everbody. There was a decent looking limit order trade on the NQ today it's circled. Happened right as I was preparing to leave early so I missed it but it does look good if you can get out before the lows as it was right after a sharp uptrend expecting a new high. Could get a reversal F2ES now soon on the NQ, we have good context for it.

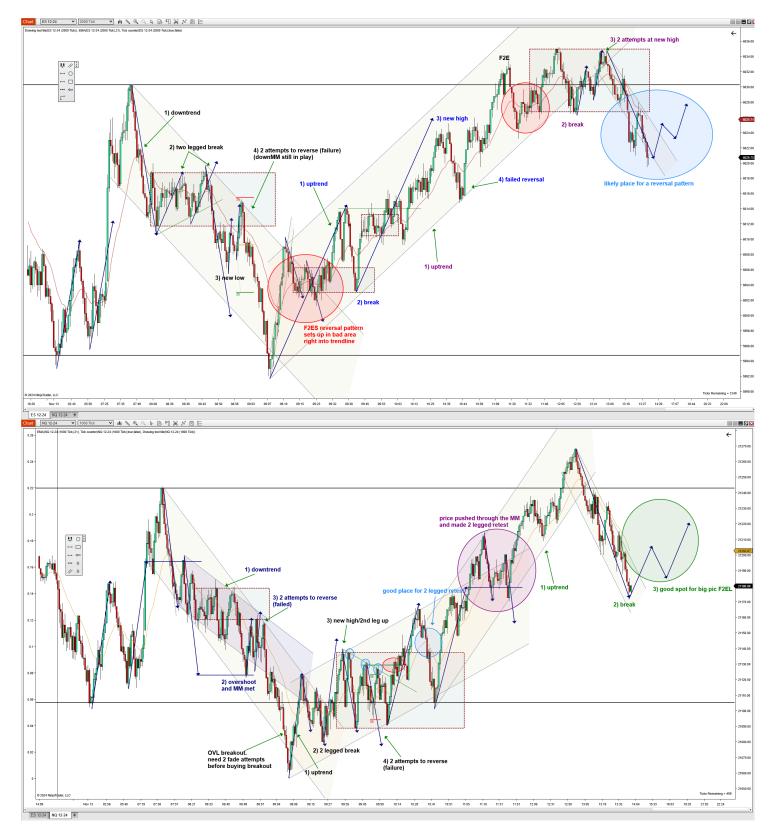

The YT video is uploading now. Enjoy this EOD post y'all. I hope you all had a great trading day.

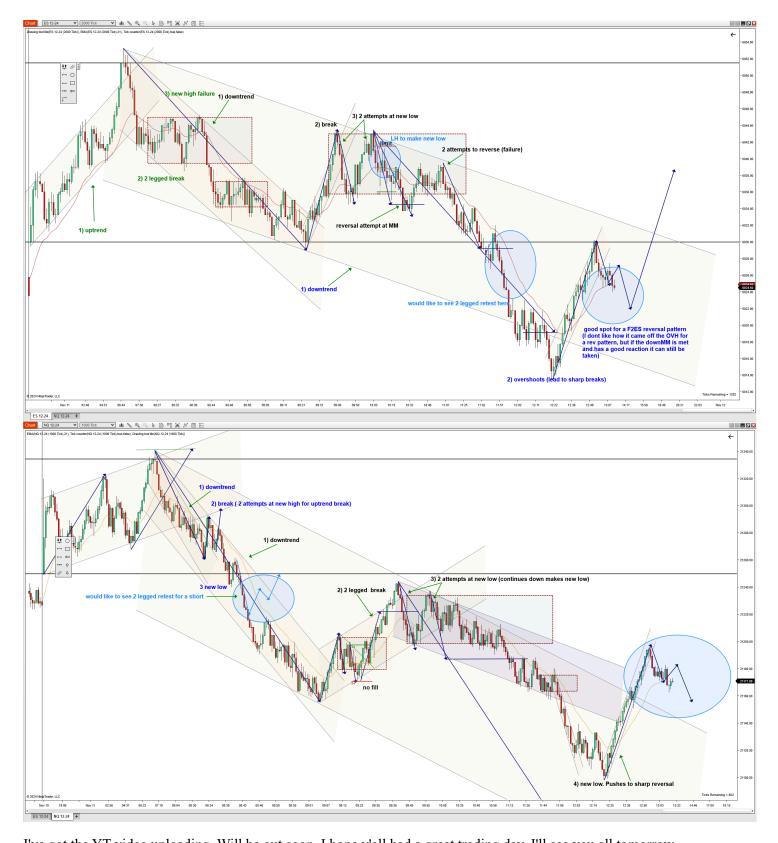

Have a great day everybody I'll see y'all tomorrow. Could get a F2EL soon on the NQ btw inside of this range that we've got forming.

I hope you all enjoy this post. On the NQ we could get something very soon. A retest of the OVL. It's pushing higher than where it is in the hoto as I'm typing but we can still get a big pic F2ES to continue the OVL fade. Have a great day everybody.

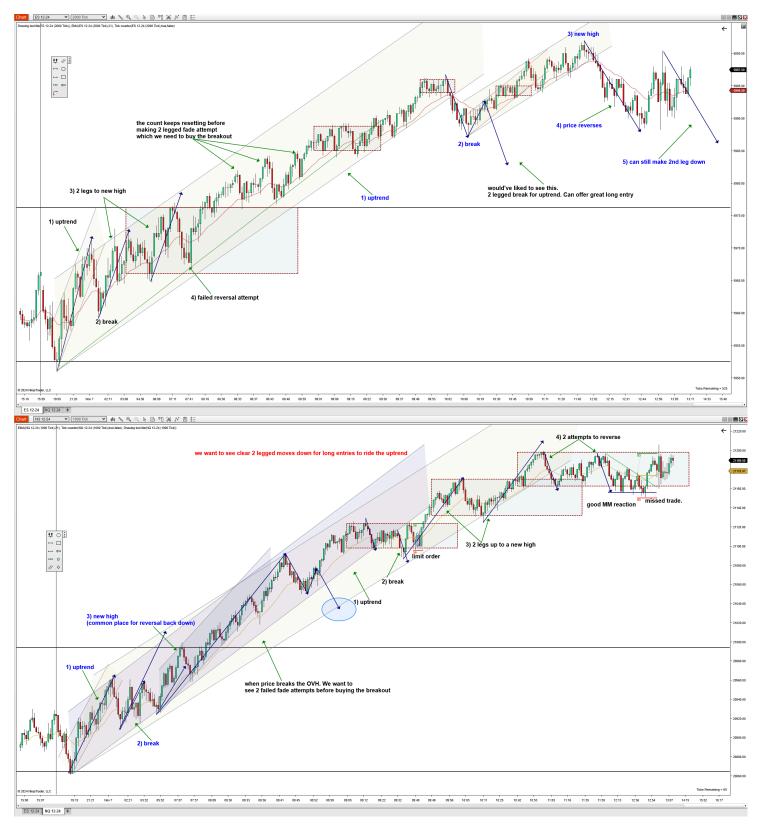

YT video is uploading. Gonna take awhile before it's out most likely because it's 40 minutes long. Didn't even realize how long went by while recording. Enjoy this EOD post y'all, I hope it helps you see the price action in a clearer light. Have a great day everybody.

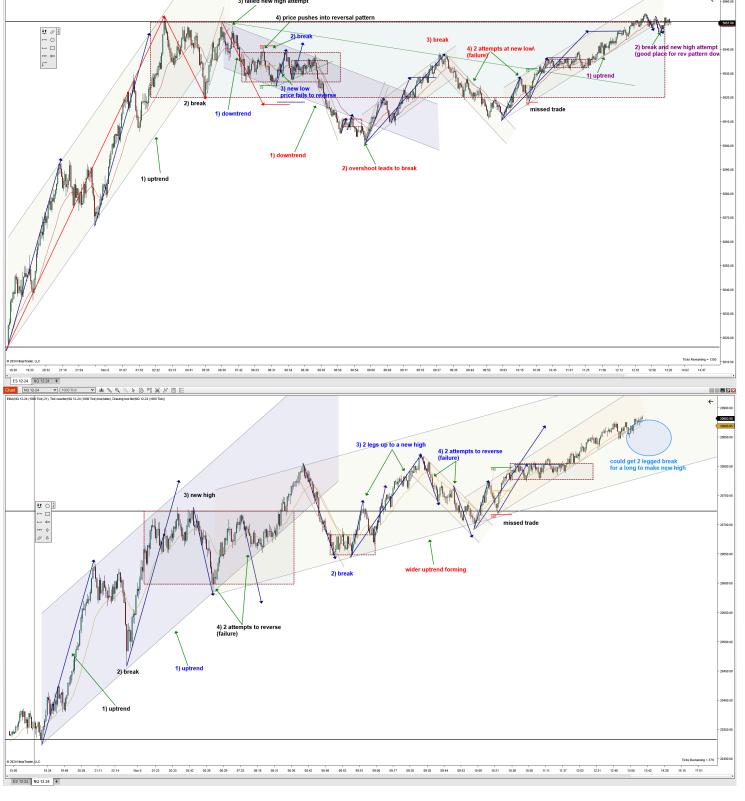

I've got the YT video uploading. Will be out soon. I hope y'all had a great trading day. I'll see you all tomorrow.

Have a great day everybody. The Friday review is uploading now I hope you all enjoy it and find it useful. The large uptrend just played out on the ES and on the NQ we are at the OVH. Both markets are in common reversal areas so keep that in mind if youre still trading.

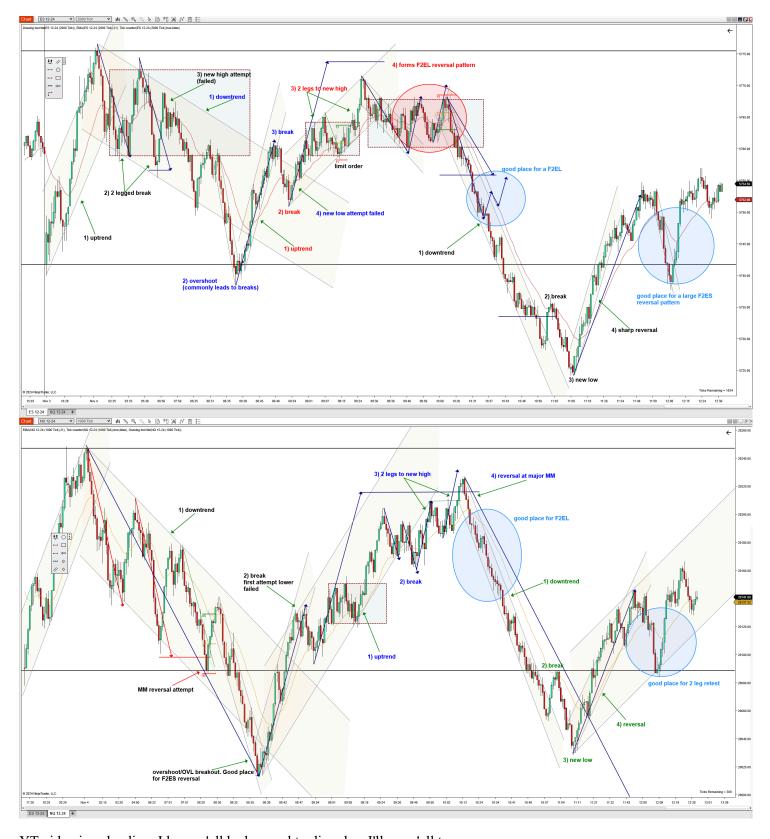

The market kinda died suddenly. There are obviously some big events in the news as of late so it's not too surprising to see the market act a bit strange. I hope you all have a great rest of your day. I will see y'all tomorrow.

I missed a trade on both markets today. They happened at the same time on both. They are marked here. I wasn't doing perfect on updating my drawings as fast as normal. On the ES I didn't extend out the range far enough. Price was making a big fade back in and price held right on it. On the NQ, price broke out the OVH, made 2 attempts to fade, fade failed (barely pushed back in a little) before pushing up into a very strong HL. Now on the NQ price could break this thinner uptrend with 2 legs down where we can get a long.

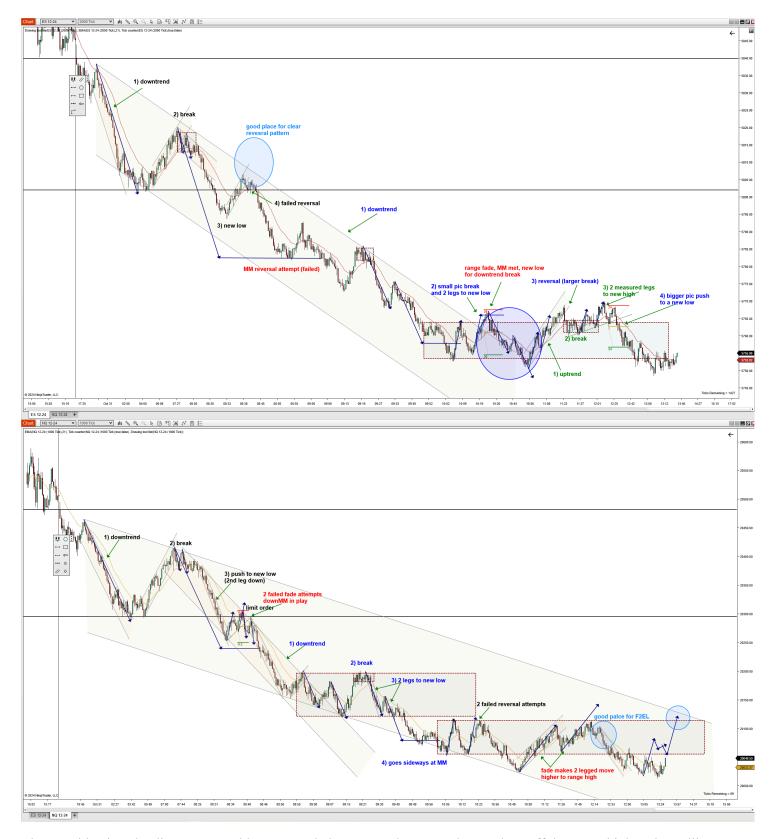

I hope you all had a great trading day. Enjoy this EOD post. I'm not able to make a video today but I hope this post helps you to see bigger picture PA. Have a great day everybody.

YT video is uploading. I hope y'all had a good trading day. I'll see y'all tomorrow.

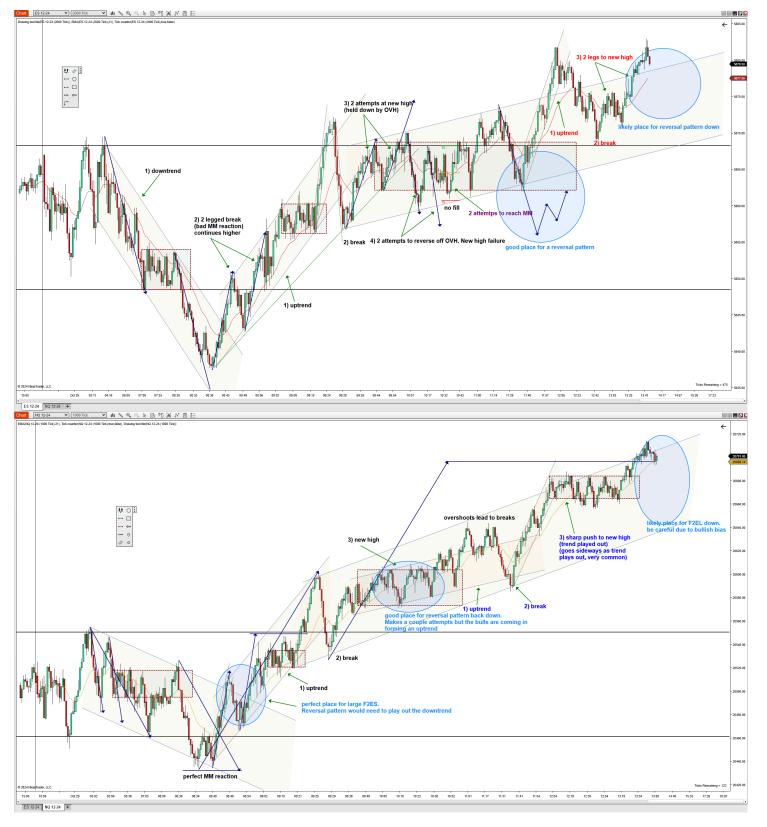

The Friday review is uploading to the site at the moment. Have a good day everybody I'll see y'all on Monday.

The YT video is uploading now. Could get a couple legs up on the NQ and get a short off the range high and trendline at the same time. Combining KEP's can be powerful. Have a great day everybody. I'll see you all tomorrow.

Have a great day everybody. I've got a video uploading to youtube at the moment, but it may be a while before its done uploading as it's nearly 30 minutes long. I hope you all had a great trading session. I'll see y'all tomorrow.

Have a great day everybody. We could get a reversal down soon on the NQ. Be careful shorting though we have a very clear upward bias. However, we are off the channel highs, and just met a majhor MM, so we could get a perfect reversal pattern.

Have a great day everybody. The construction in my house is now basically done. The noise was getting bad as they started working upstairs which prevented me from recording lately. A couple minor things to do but all the loud stuff is done so I'll be getting more videos out this week. Have a great day everybody!

Enjoy the weekend everybody I will see y'all on monday. The Friday review is currently uploading to the website, I hope you find it helpful.

YT video is uploading now. We could soon get a 2nd leg down on the ES for a long entry off the OVL as the 2nd attempt at new low for te downtrend. I hope you all had a good trading session. I'll see y'all tomorrow.

Have a great day everybody. Today was a pretty good day. Got the YT video uploading at the moment so I hope y'all enjoy that. I'll see y'all tomorrow.

Have a great day. I know yesterday I said I'll try to get videos out for the rest of the week but the construction in my house is just too loud right now. Thankfully it's almost fully complete and won't be an issure very soon. Have a great day everybody.

Have a great day everyone. No video today, but I'll do my best to get a video out everyday the rest of this week. And of course on Friday for sure there will always be a video no matter what. Another dry day for the ES. This has been happening quite a bit lately. NQ has a couple good ones but nothing for the ES. Just need to be patient on days like these. Have a good day everyone.

Hi everyone I hope youve had a good trading session. I accidentally uploaded todays review to YouTube forgetting today was Friday. I've decided that I'm gonna publish it on YouTube since it's already out. The Friday reviews are meant for members only but it's already uploaded so I'm just gonna publish it. Haven't gotten a YT video out in a few days anyway so it would probably be good for the channel. Have a good day everybody.

Have a good day everybody. Still too loud to record. Luckily it will be over soon. I hope y'all are liking the hourly posts again. Price has felt a bit slow this week, hopefully tomorrow we get a better day with perfect PA. I'll see y'all tomorrow.

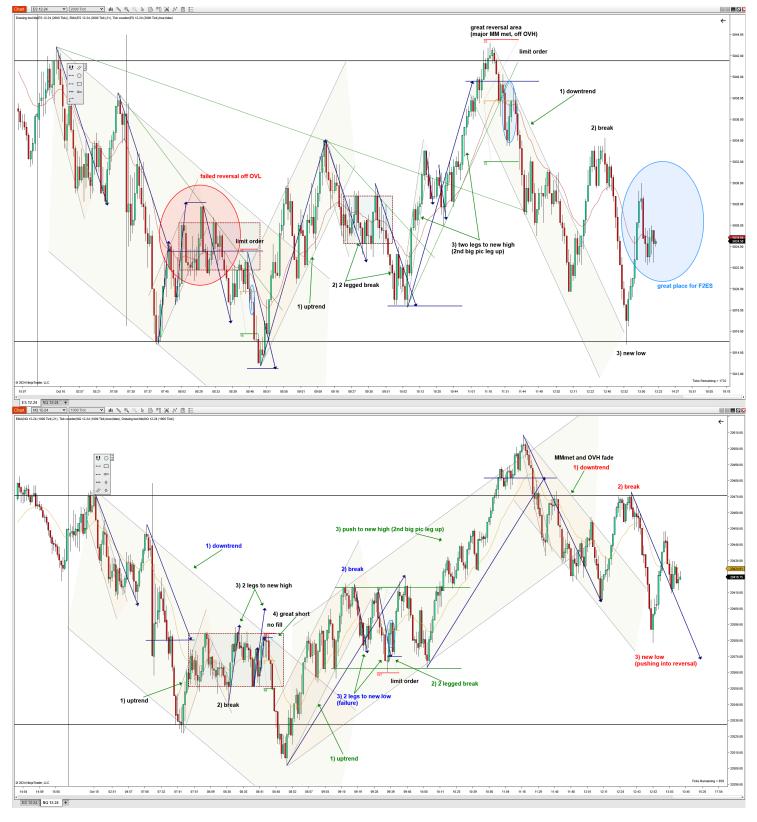

Have a great day everybody. No video today as there is now some construction being done upstairs, which is making it too loud to think at this point, so definitely no video. Replacing some flooring. I hope this post helps you see the bigger pic. On the NQ we could get a couple legs down to the lower trenldine of the current upchannel and get a long. Entry would need to close above the MM that price just pushed through

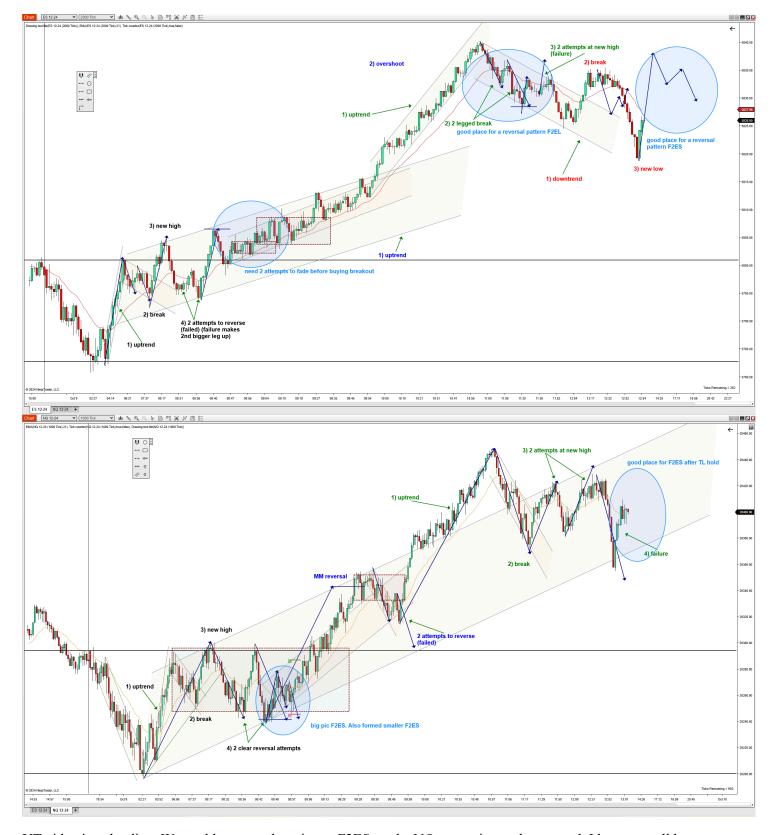

Hi y'all I've got the YT video uploading right now. Today was dry on the ES but there was a good on on the NQ. We can get a short soon on the NQ by the way. Holding off the trendline and is already a big pic F2ES. We do need to watch out for the clear triple bottom that formed at the lows of the day however. Have a great day everybody. I'll see y'all tomorrow.

Enjoy this post, I hope it helps you see the bigger picture. Got the Friday review uploading to the site at the moment.

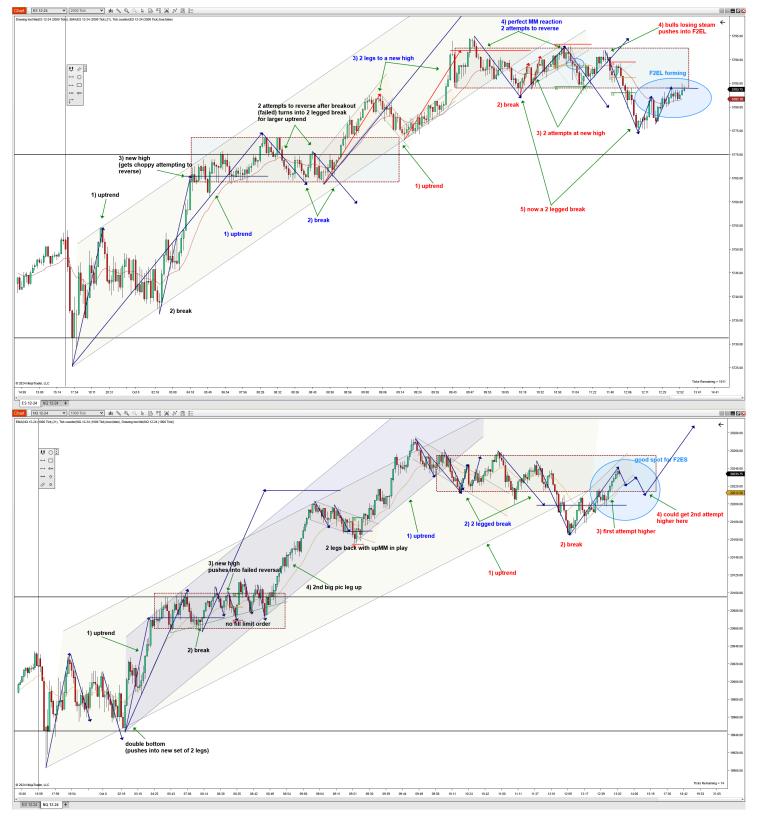

YT video will be published soon. On the ES price is revsersing off the OVL, and is in a great place for a F2ES reversal pattern, so watch out for that if you're still trading. Have a great day everybody.

YT video is uploading. We could soon push up into a F2ES on the NQ to continuue the uptrend. I hope you all have a great day. I'll see y'all tomorrow.

Have a good day everybody. Just met a major downMM on both markets. Good place for a reversal pattern F2ES for a long soon. Have a great day everybody.

Got the YT video uploading now. I hope y'all had a good trading day. Enjoy this post everyone, I'll see you all tomorrow.

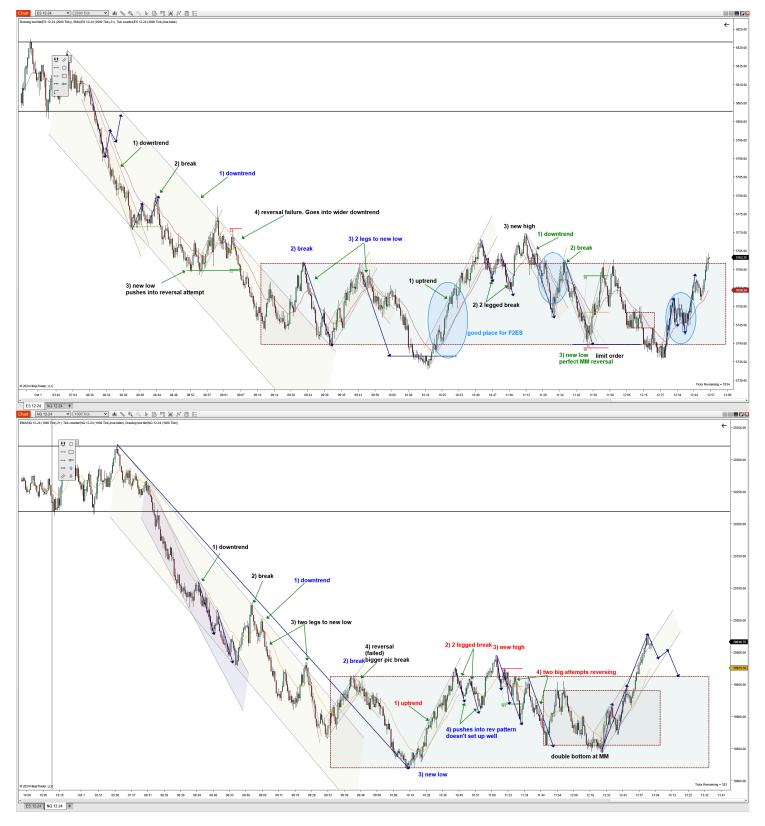

I hope you had a good trading day y'all. The video is uploading to the site right now. Will probably be out in like 30 minutes. Have a great day!

There was a reversal F2ES on both markets pushing back into the range. On the NQ, it was blocked by trendline and due to the major downMM in play I wanted something closing above the stt. A good bar closing out that triggers didn't form. The ES however, had a bit different context. The ES had just met the major MM for the day, pushing off the OVL. Perfect reversal context. I really liked it, however price began to really struggle and found resistance and is now chopping. I decided it was best to just get out. Have a good day everyone.

A good looking F2EL just formed on the NQ after fading the OVH. Price made 2 clear attempts to push back out, held down by the OVH with great bearish reaction and room to the small range low. Price is holding strong off the dotted range low and is pushing up so we may break the OVH since the reversal pattern didnt get far. Have a great day everybody.

Could easily get a long soon on the NQ on the reversal pattern that could soon set up. Ideally retesting the range high. The YT video is uploading at the moment. Have a good day everybody.

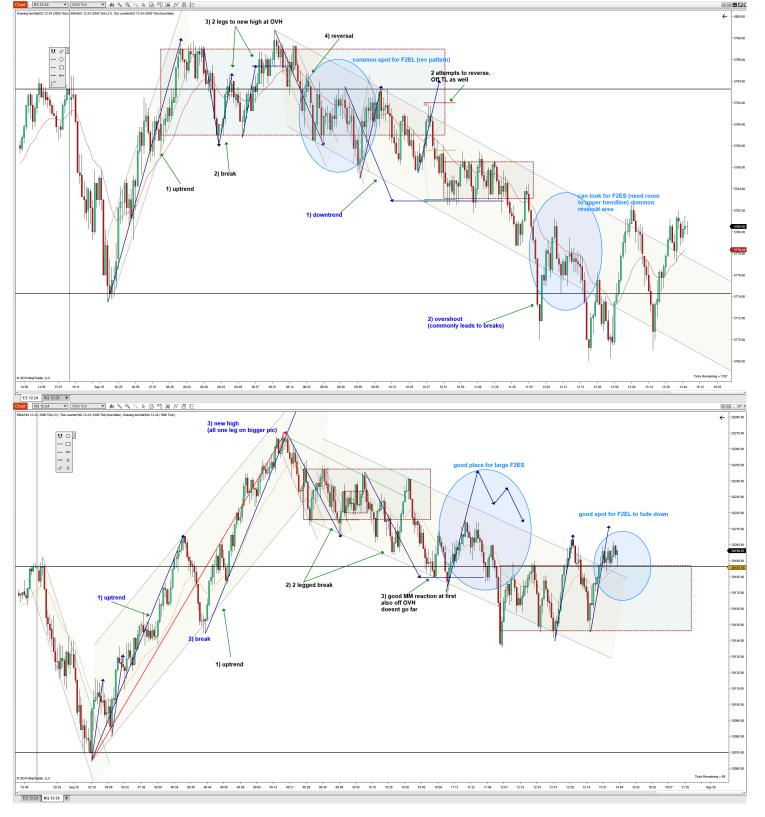

Sorry for the lack of videos last few trading days. Been a bit busy lately. Anyway, enjoy this EOD post. We could soon get a decent reversal pattern on the ES and NQ fading the OVL. Have a great day y'all.

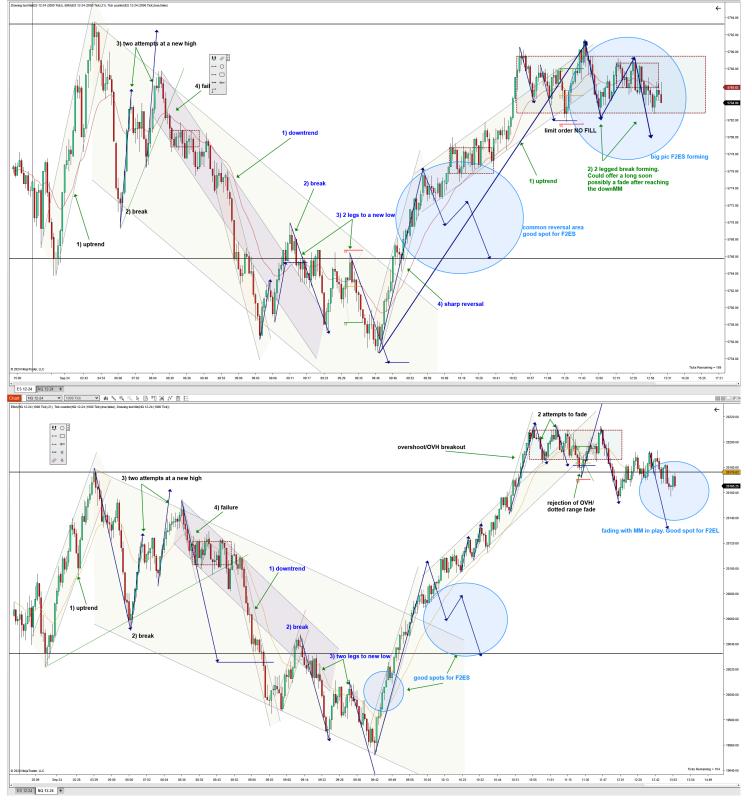

I'm uploading the Friday review to the site at the moment. I hope you all enjoy. We are just broken out of the OVL for the NQ at the moment. We could form a F2ELholding below the OVL for a short to make the 2nd leg down for the new low for the downtrend break. Have a great day everybody.

Today was pretty slow on the setups. This whole week has felt pretty slow. Either way it's still good to study the slower days and learn how to trade them. I hope you enojoy this post. Have a good one everybody I'll see y'all tomorrow.

Could get a short soon on the NQ. It is somewhat of a big pic F2EL due to the 2 legs up breaking the downtrend. I'd like to see price fade into the dotted range, then form another short entry under the EMA like a smaller F2EL. I hope this post helps you see the bigger pic structures. Have a great day everybody.

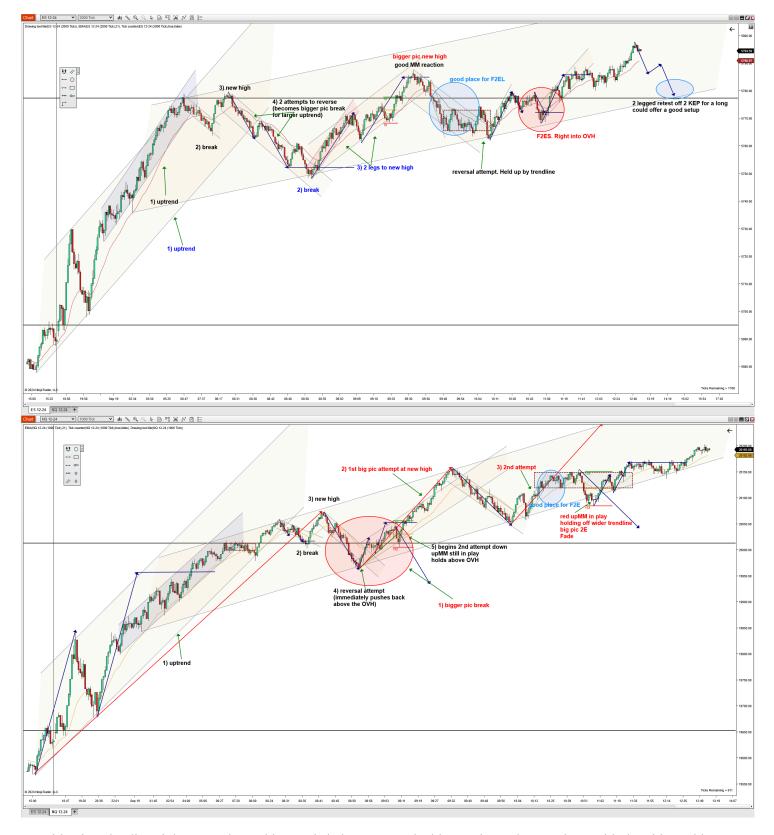

Hi everybody I've got the YT video uploading right now. There is a big pic F2ES forming on the ES right now which could offer a long very soon. Could break the dotted range lows and get a good fade reaction. Have a great day everybody.

Hi everybody I hope you had a good trading day. Today was quite the range day. Both markets are fading up into range. Could form a F2ES reversal pattern holding above the trendline for a long. Video is uploading and will be out soon. Have a great day everybody.

I hope this post helps out, along with the video. On both markets, the main downtrend for the day has broken and looks like price could make a new low. The NQ is backabove the OVL, but the ES is not. Could retest and make 2nd leg down, which price could offer a short on the way down. Have a great day everybody.

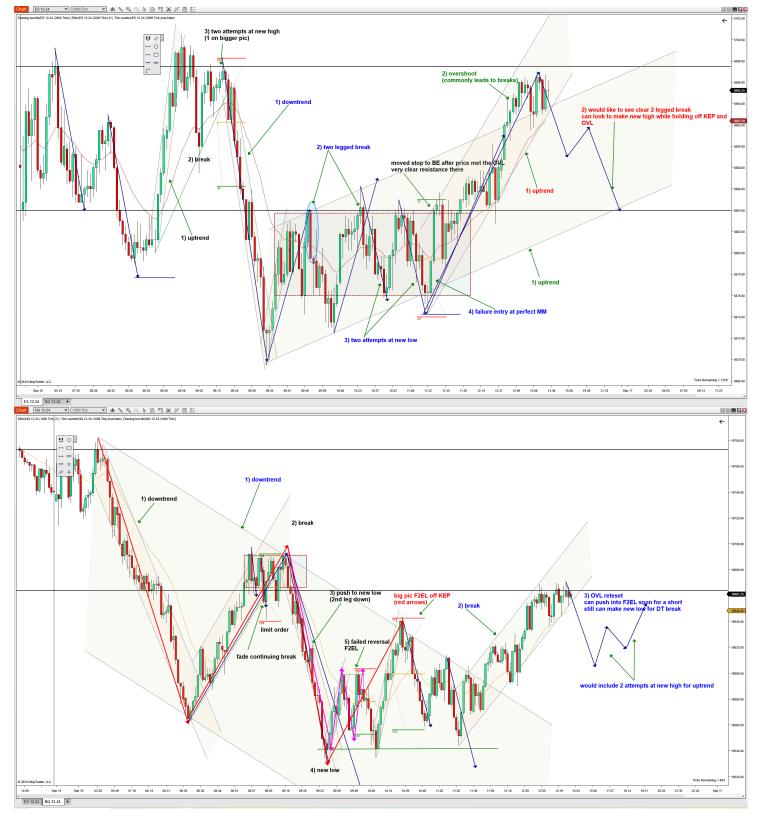

YT video is uploading right now. I hope this post is helps you see the bigger picture better, along with the video. This uptrend on the NQ is losing steam, price is struggling to reach the channel high so it may break soon. Could get a large F2EL reversal pattern and get a short on the way down to the OVH. Have a great day everybody.

Today was a bit slow. FOMC days tend to be like that. At the end price went absolutely crazy as you can see. Price could soon make 2 attempts at new low for the downtrend that formed during the news. No video today, sorry y'all just a bit busy. Have a great day y'all.

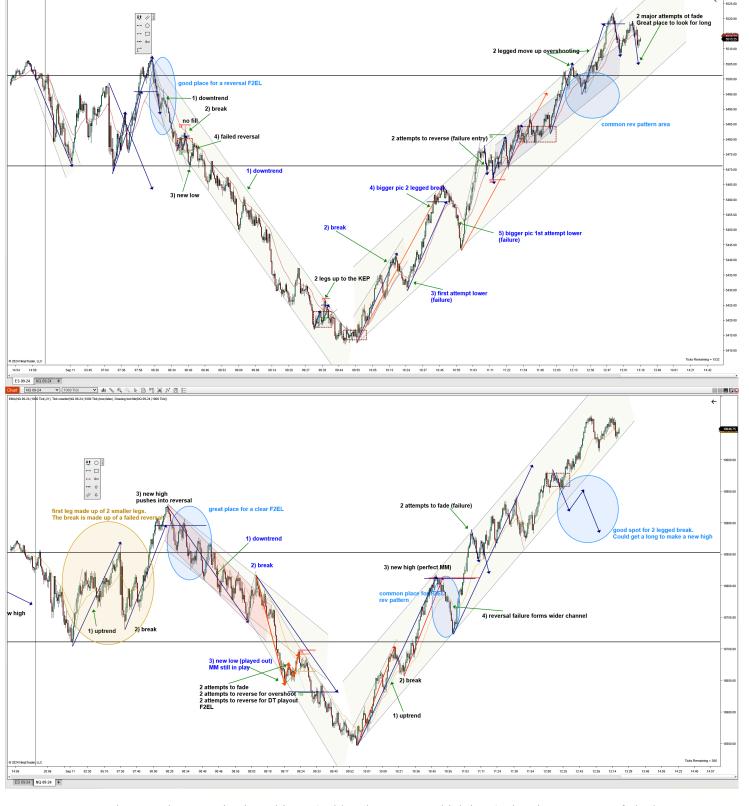

Hi everybody I hope you are having a great day. Both markets are fading back into the OVL at the moment. Good place for a reveral pattern, just need to make sure it'sets up well enough to counter the wider downtrend, meaning having 2 clear attempts at a new low. The YT video is uploading right now and will be out soon, I hope y'all enjoy.

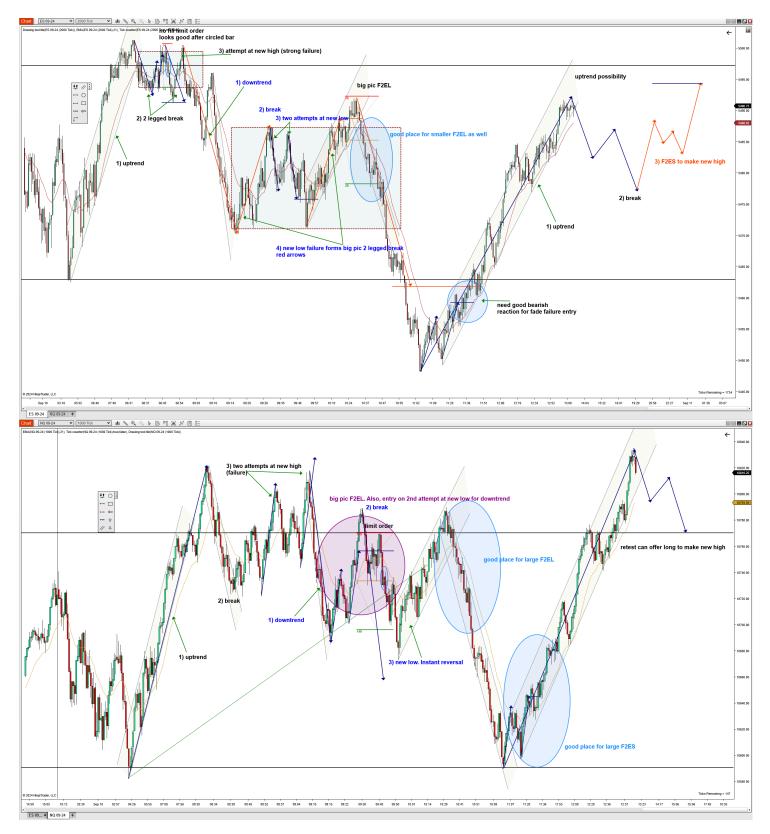

We could soon push into a F2EL on the NQ. Currently retesting the OVL. If price holds to the low side we can soon get the reversal pattern. On the ES, price is at the OVH while overshooting the wider channel. Both markets are in a good place for a F2EL, even though they have different context. Have a great day everybody, the YT video is done and uploading now.

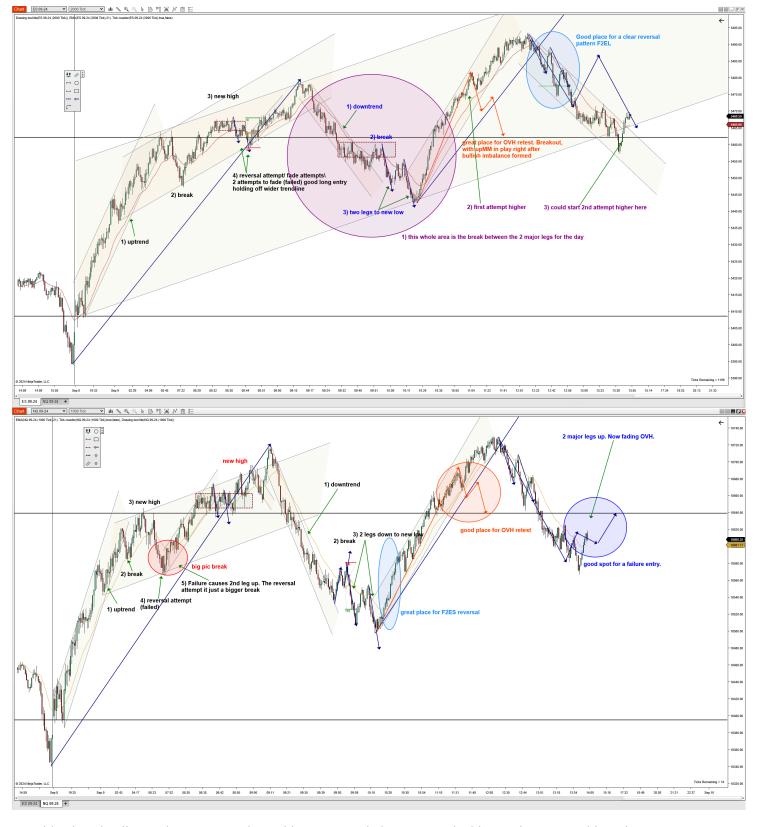

Todays chart review is uploading to the site. I hope this post helps you to see the bigger picture structures, and learn to spot them in real time. A good example of watching structures get bigger picture is on the NQ, the uptrend pushing out the OVH makes a new high, 2 attempts to reverse, offers a good long entry (failure entry) which pushes price into a 2nd bigger pic leg to a new high. Video will be out soon. Have a great day everybody.

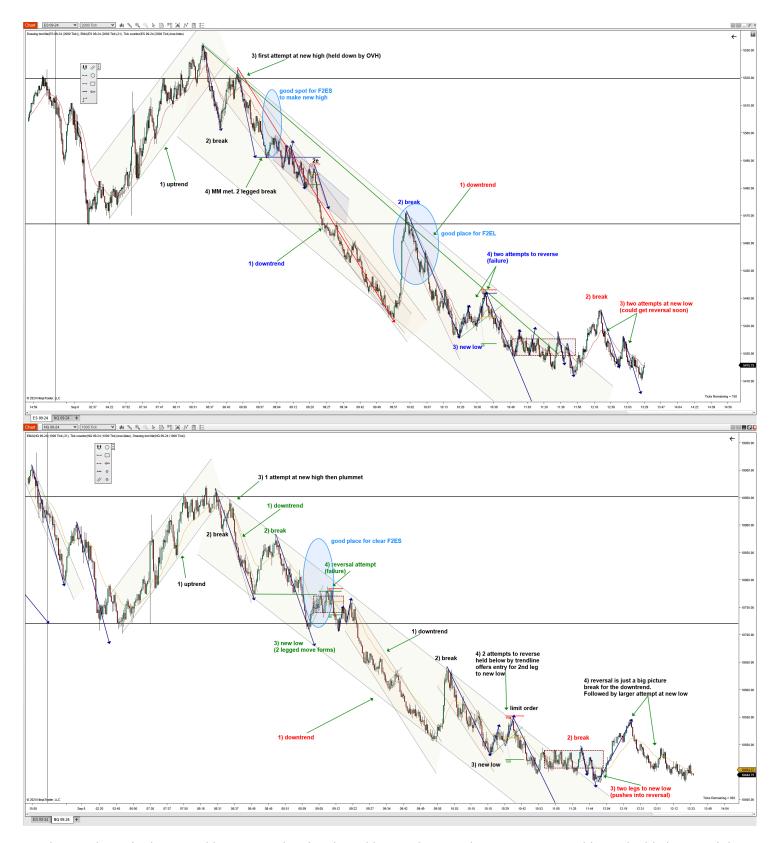

We can soon get a long on the ES. Price is making a 2nd leg down now, which is a 2nd major attempt to fade the OVH where we can look to get long on the fade failure. YT video is uploading now and will be out soon.

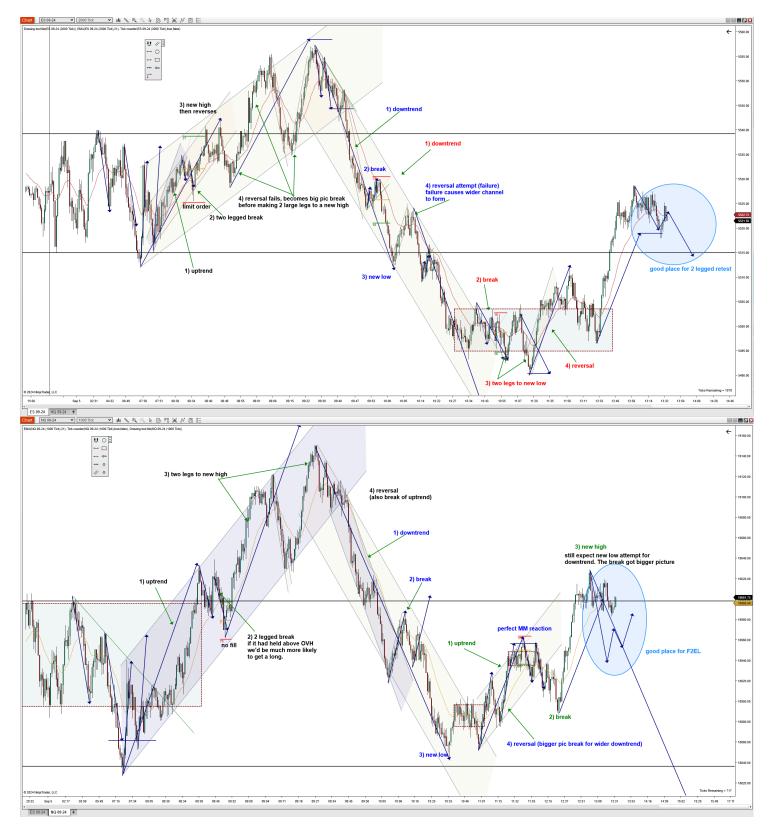

Enjoy the EOD everybody. I've got the YT video upoading at the moment. Just a reminder, on Thursday the 12th my power will be shut off due to construction so I will not be trading and Penguin Trades will be closed. I'll still make a EOD just way later when I get the power back. Have a great day everybody.

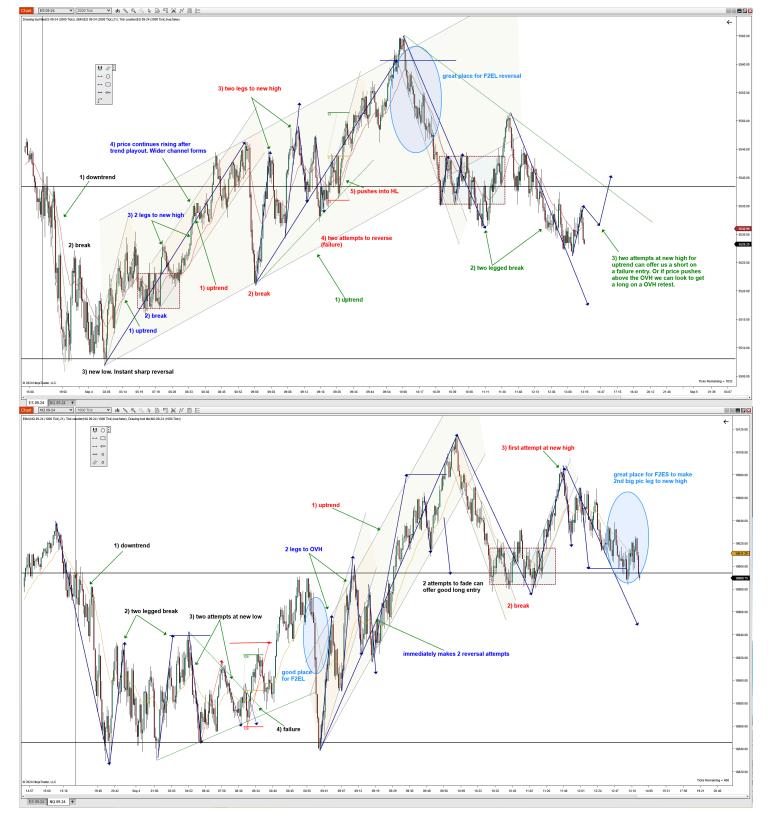

YT video is uploading at the moment. I hope this EOD post helps you see the bigger picture PA a bit easier. Have a great day members.

On the NQ the main downtrend has a very clear break, and has made a new low attempt. Its making a double bottom right now, but if we get another 2 legged move higher we can get a short soon. The Fridayt review is uploading at the moment. It'll appear in the catalog shortly. Have a great day everybody.

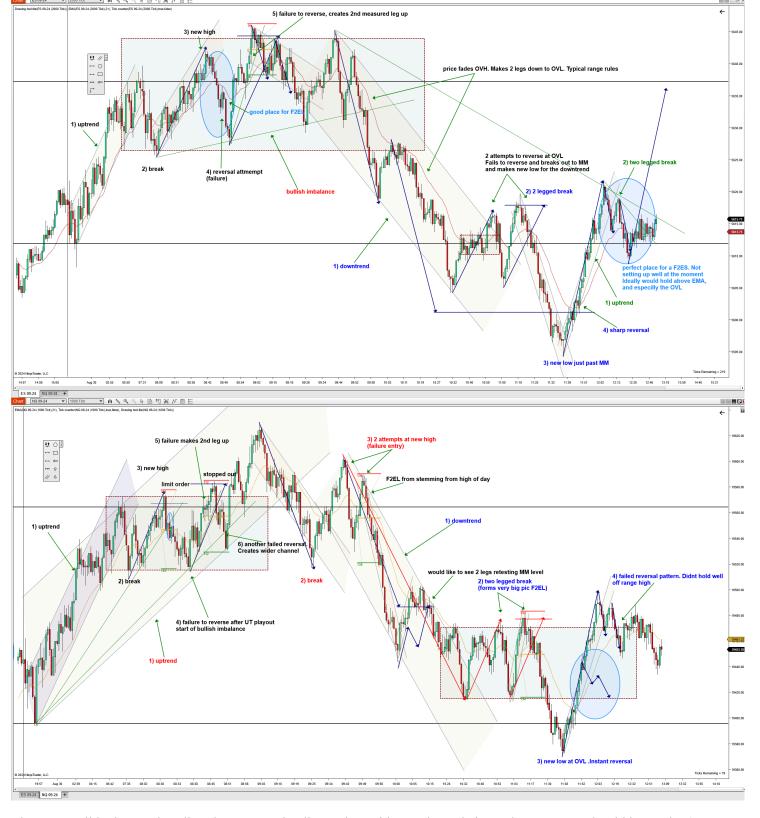

Hi everyone todays video is uploading to youtube. May be awhile before its out as it's 30 minutes long and will take a while to upload. Right now we could soon get a large F2EL on the way down to the OVL coming off the OVH for the NQ. Right at a big pic 2 legged break for the downtrend so this could happen soon. Have a great day everybody.

I only liked 1 on each market. On the ES we can very soon get a 2 legged retest of the OVH to continue the fade down and reach the downMM. as for the NQ we are just now pushing back into the OVH. Unless bears start coming in, price could easily push into a F2ES. The uptrend attempting new high is fighting the OVH fade, so stick with what price is more leaning towards.

The video is uploading at the moment and will be out soon. Today was pretty dry so dont feel discouraged if it was a stressful trading day. Some days are just like this. Have a great day everybody.

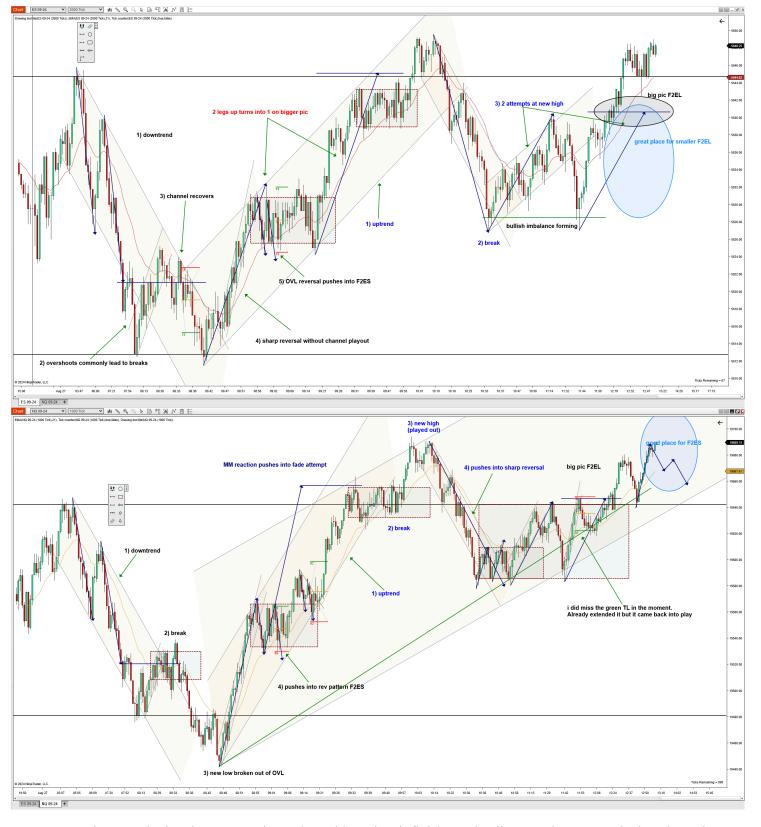

I hope you all had a good trading day. I am uploading todays video to the website at the moment. Should be out by 2 cst. I'll make a post on the main community section when it's published. Have a great day everybody.

Have a great day everybody. Youtube video will be out soon. We just faded the OVH on both markets so I'd want to see 2 clear legs retesting the OVH. Even if it doesnt retest I mainly just want a very clear F2EL that closes below the EMA. Could happen soon so watch out for that. Have a great day everybody.

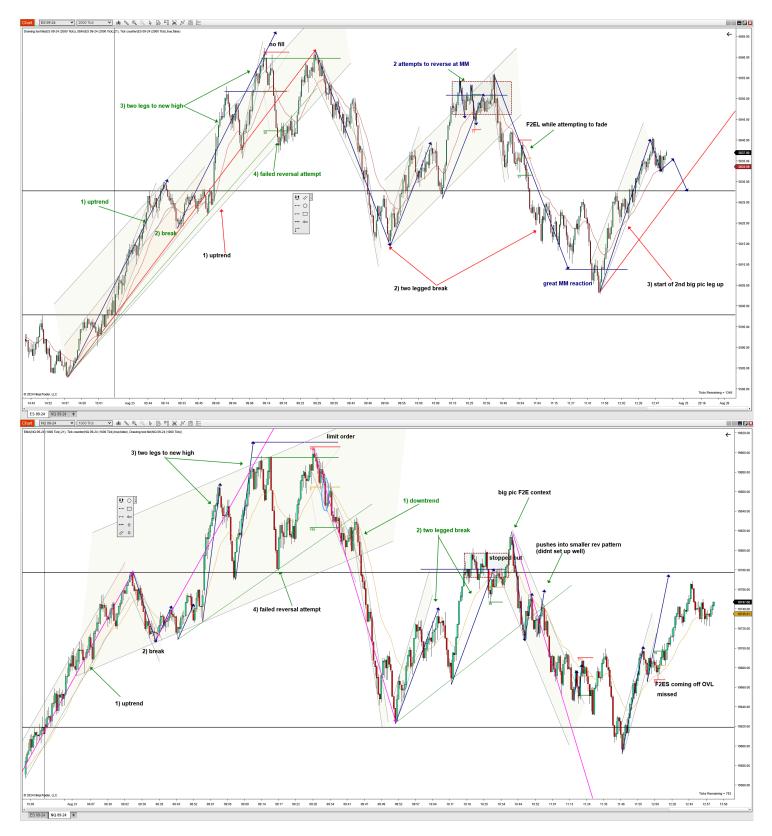

Just now reaching this downMM on both markets. On the NQ we're pushing off a wider trendline so we could get a long soon. Could push above EMA and form a F2ES soon. Video is uploading to youtube at the moment. Have a great day everybody.

Have a great day everybody. I hope you enjoy todays video when it finishes uploading. On the NQ, on the last short, there was a green trendline that I removed after the swing had pushes through it and didn't consider it in the next short. It did end up coming back into play and didn't catch it as the reason for sudden reversal higher in the moment. I should have considered it though due to the clear bullish imbalance that had formed. I would gone in a couple tick early to be safe had I caught it.

Have a great day everybody. I've got a video uploaded to YT, about to publish it. We could very soon form a reversal pattern on the ES. Price is pushing towards the OVL in a fade attempt so we have good context to get a long. Just need a clear setup.

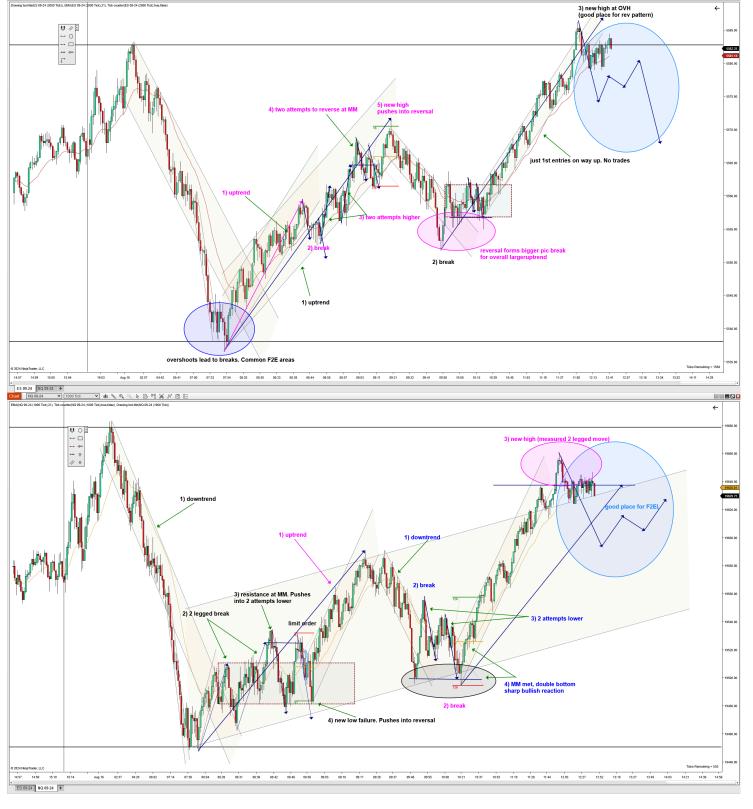

I'm uploading the Friday review too the site right now. Will be out by 2. Today was a good day for both markets. On the ES the MM's at the beginning were a bit confusing so I go over that a bit at the beginning of the video. Have a good day everyboody.

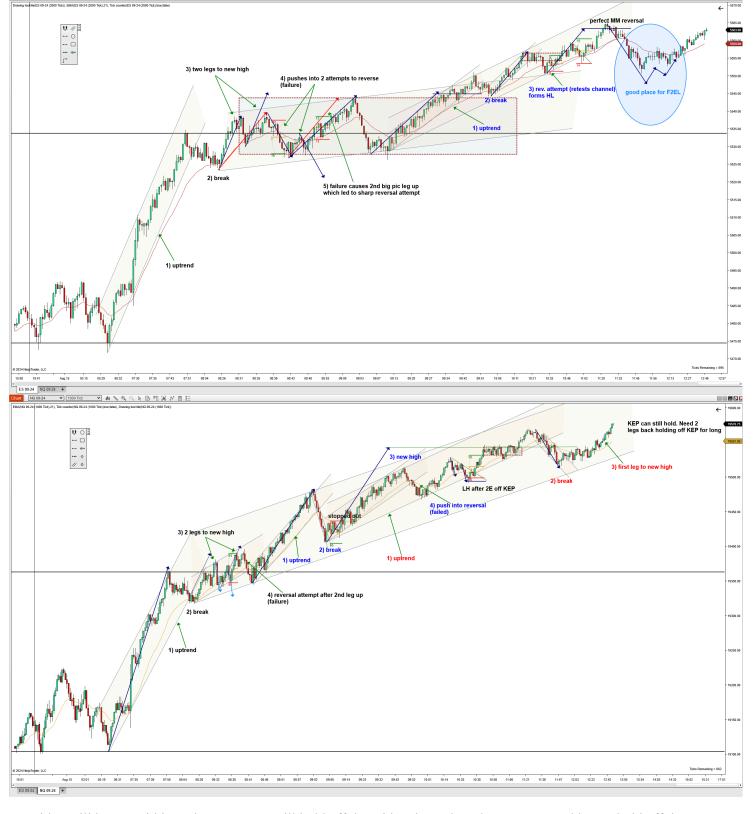

Have a great day everybody. YT video is uploading now. Price is just a couple points from reaching a major downMM on the NQ and ES. Price can easily push up into a sharp F2ES reversal pattern. The main downtrend is played out on both markets. If price really struggles to reverse, then we are likely going into a wider downtrend.

We could very soon get 2 big attempts to fade the range on the NQ. A good retest long would be nice to see. On the ES price is much further broken out but we could still get something similar, but I'm thinking we could get a good reversal pattern on the ES soon as well since it's coming off the high of a channel. A video will be out soon y'all. Have a great day everybody.

Video will be out soon. We can very soon get a reversal pattern on both markets. Each have a bit different contexts, but both are good for a clear F2EL reversal pattern. Have a great day everybody.

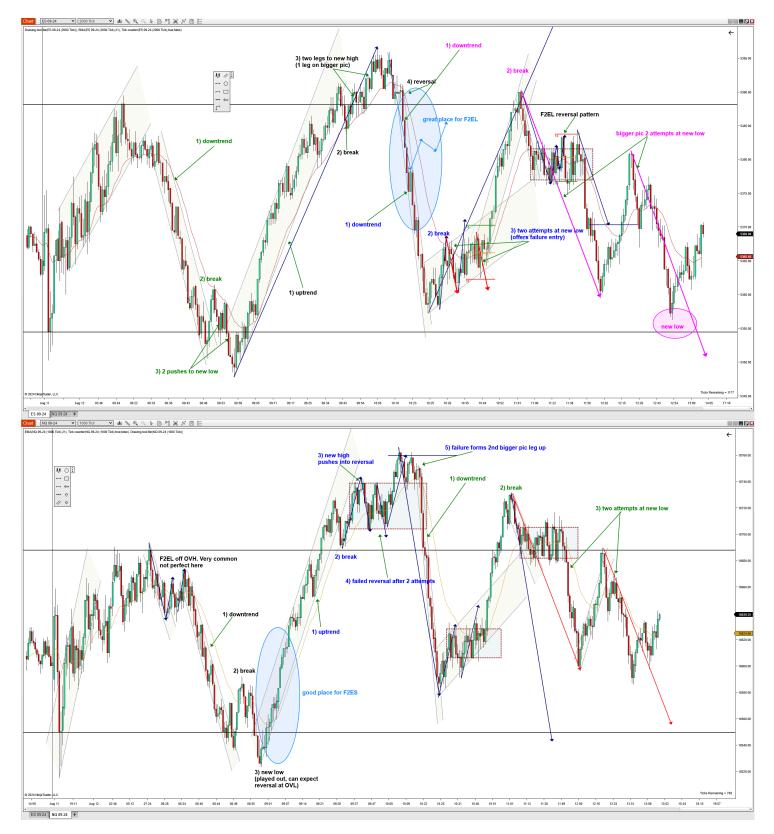

YT video will be out within an hour. We can still hold off the wider channel on the NQ. We could soon hold off the KEP again, we just need 2 clear legs down for a long entry. Have a great day everybody.

Hi everyone I've got the YT video uploading. We could soon get a reversal pattern on the ES off the OVH. Price had a sharp reversal after the downtrend played out, but struggled to get above the OVH, which means it could easily hold and we can get in on the fade. Have a great day everybody.

Video uploading, will be out soon. We just broke the major uptrend on the NQ, wouldn't be surprised if it forms a 2nd leg down. I'd like to see that, then a push above EMA forming bigger pic F2ES for a long to make a new high for the uptrend. On the ES, we could get a 2nd leg down to the KEP soon and get a long off the KEP. Have a great day everybody.

Have a great day everyobdy. I'm uploading the youtube video for today at the moment, will be out soon. From the high of day (on both markets) price formed a very big pic F2EL. On the NQ it retested the OVH with good bearish reaction. I wasn't focused in the moment as I was making video during the retest but it looks good on the NQ.

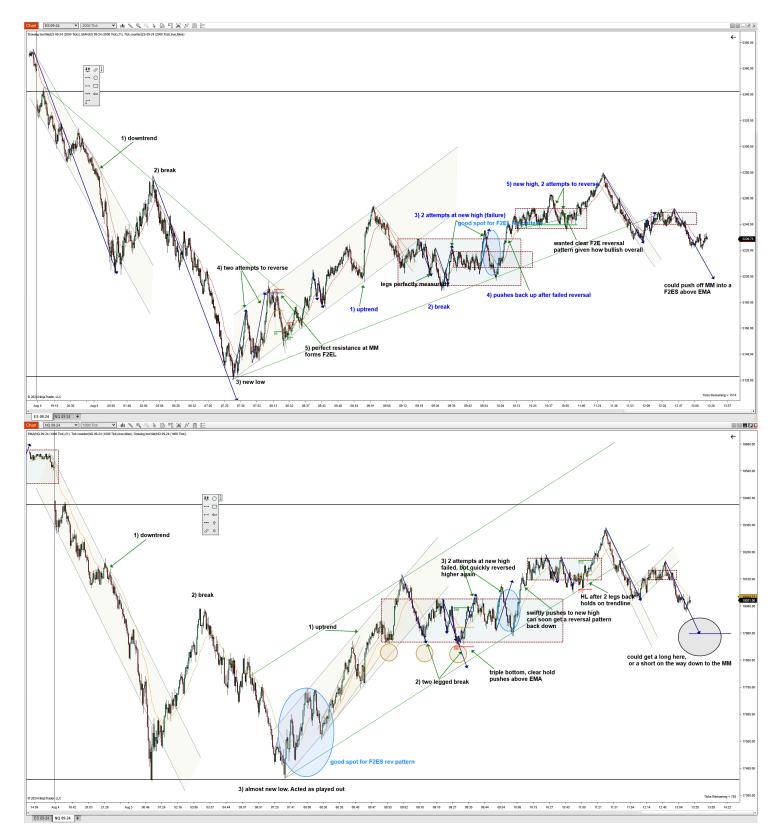

Got a video uploading at the moment. I hope this post helps out with seeing the bigger picture. Have a great day everybody.

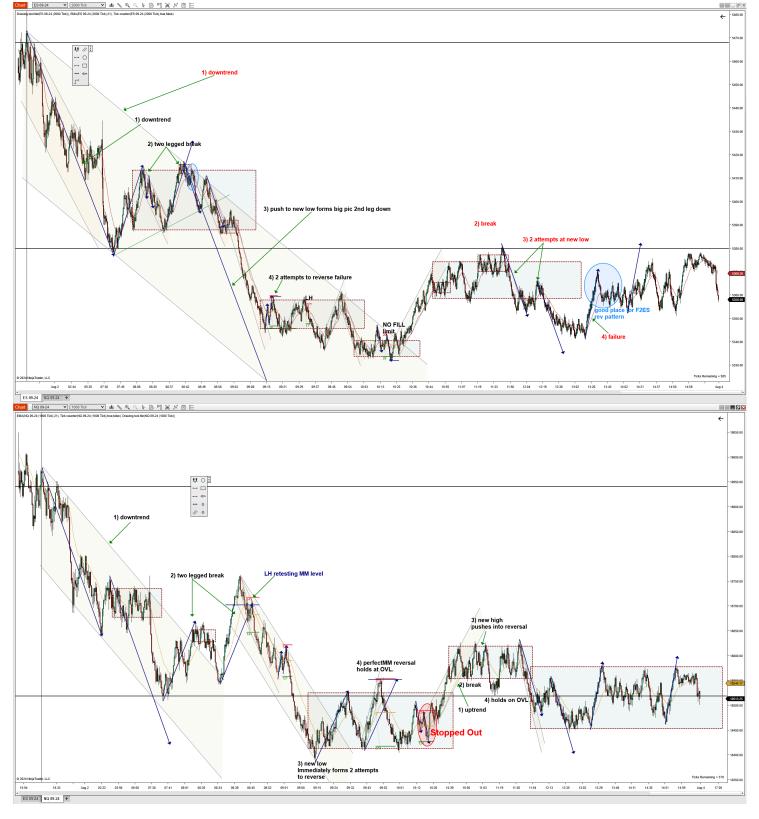

Hi everyone I hope you have a great day. I've got another video uploading at the moment, so I hope you enjoy it and find it helpful. Also watch out for a reversal for both markets soon. We've nearly reached the major upMM for today.

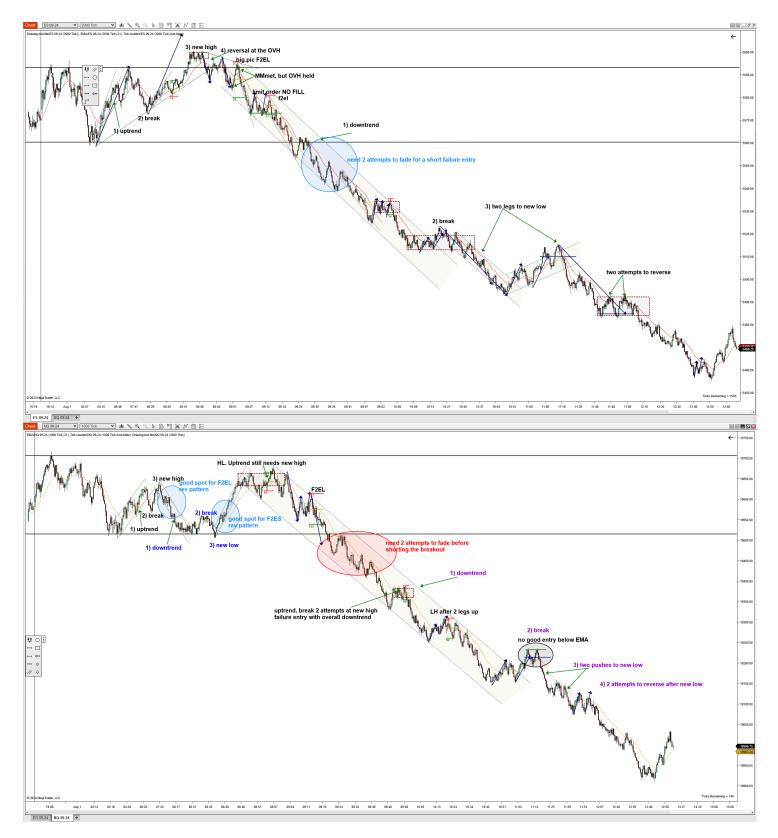

There was just a good looking short on the ES. I did miss it. It would have been best to use a limit order on the trade due to the range. There 2 major legs up, followed by the smaller MM that was met before sharp push down. Other than that nothing for me on the ES.

On both the ES and NQ we could get a short on the way down to the current active MM. If we get nothing on the way down, we could still bounce fof the MM level then push into a F2ES that holds above the EMA, so we'll see what happens. Have a great day everybody. I will make a video on today's price action either later tonight or tomorrow early in the morning. I've got a doctors appointment so I can't at the moment but I'll see you all tomorrow.

Have a great day everybody. I hope you find this valuable. I got stopped out on the NQ, but with a day like this that isn't really a big deal. We had just formed a triple bottom under the OVL and had a sharp push off towards the OVL. The OVL acts like a magnet, so I should have waited for a more significant 2nd leg up, as it wasn't big at all, and could therefore make a 2nd attempt at new high using the OVL as a magnet. Which is what happened and I got stopped out. Stuff like this happens. Not a big deal as long as you don't let it get to you. I had a great day on the ES and NQ so after that loss I was just done.

Today was good on both markets. The major downtrends on each market has played out. Right now price is sharply reversing higher, so it's possible a F2ES reversal pattern could form so watch out for that. It'd have to be very big pic for me to enter given how bearish it is right now.

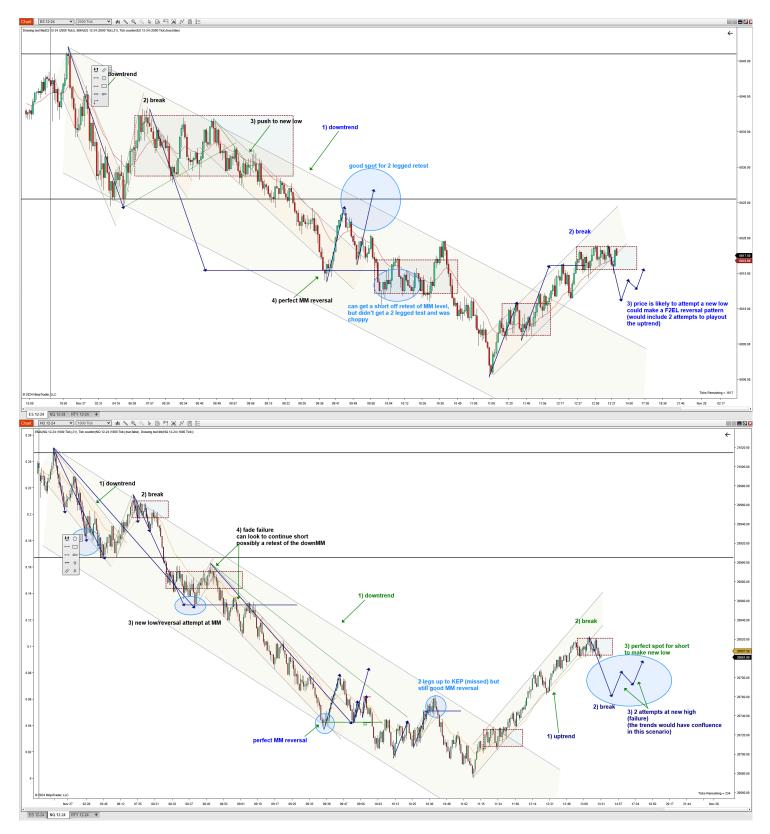

Today was a pretty good day for both markets. We just retested the OVH on both. On the NQ we could still make a good F2ES pushing off the OVH. Less likely to set up as well on the ES due to the 2 clear legs up already. Have a great day everybody.

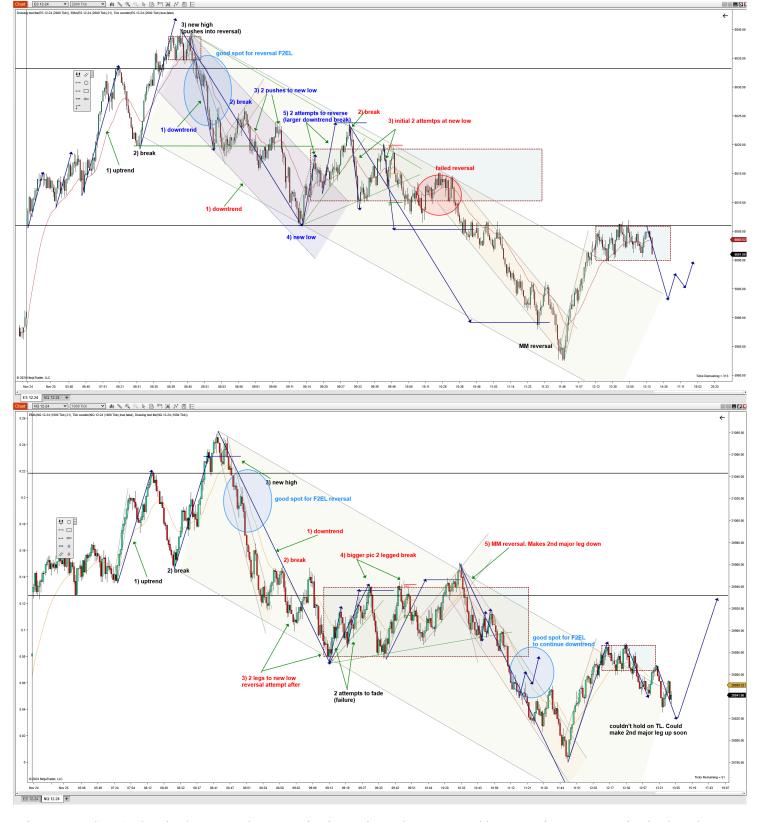

We could get a short on both markets soon. The downtrend has a break on the ES so price could attempt a new low. I'd like to see a clear 2 legged break, possibily retesting the OVL. On the NQ, the small uptrend could have a break to new high at the downtrend KEP where we can get a short. Have a great day everybody.

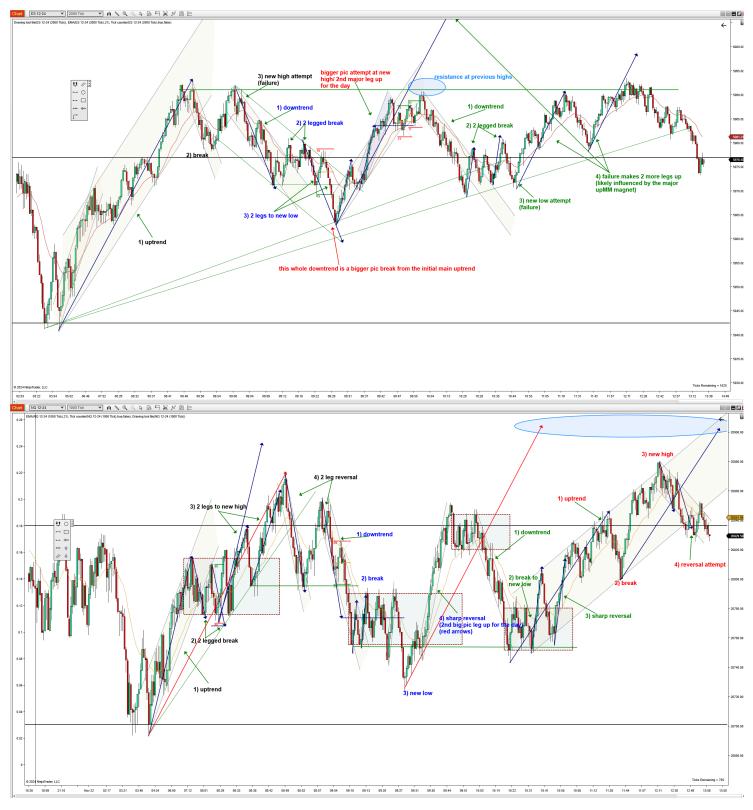

We could get something very soon on the NQ. Price reached the range low and if we get a good reaction way could get a long entry soon. Could push up into a F2ES and hold above the EMA. Have a great day everybody I'll see y'all tomorrow. YT video is uploading.

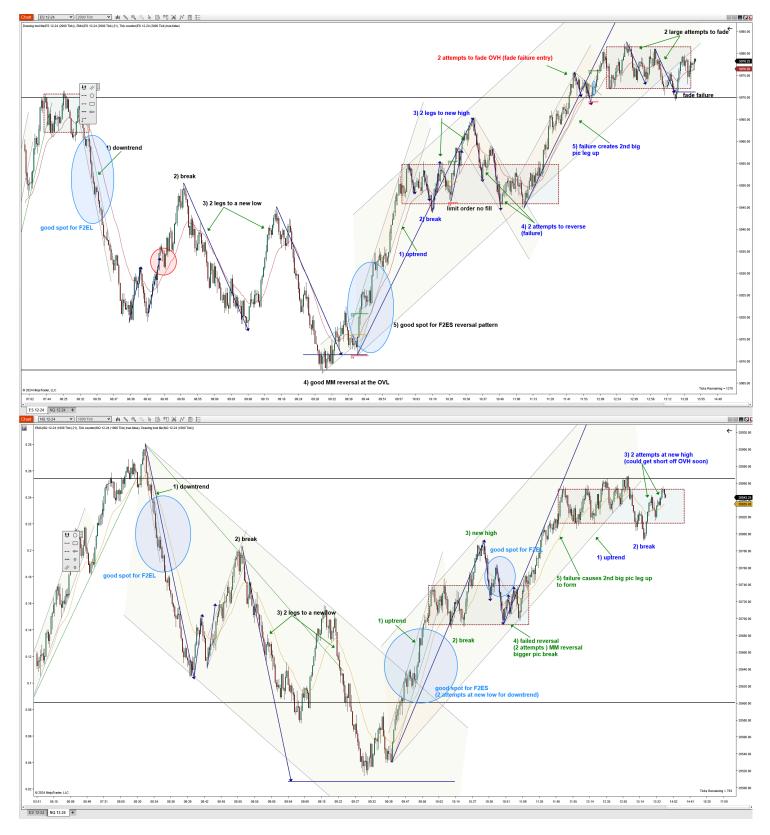

Hey everybody. I hope you enjoy this EOD post. Tomorrow is Thanksgiving so there will be no trading. Friday is a partial trading day. Will likely be slow, but I'm still gonna see how price moves on Friday. If it's really slow I might just take Friday off too. Have a great day everybody.

Price may make a 2nd major leg up on the NQ. Price is nearing a downMM and has an active upMM. Price is chopping around that downtrend line, but if it pushes out could make a F2ES stemming from the current low swing, for a long to reach the upMM. Have a great day everybody, I'll see y'all tomorrow.

The Friday review is uploading now. Enjoy this EOD post y'all. Today was a good day I hope it was for all of you too. Have a good weekend everybody, I'll see y'all on Monday.

Couple good trades on the ES. Also a no fill. We could get something soon on the NQ as the uptrend has a break and price is making a couple attempts at a new high (1 leg on bigger pic). Could get a short off the OVH as it would be a fade of the dotted range as well after the 2 attempts at a new high for the uptrend.

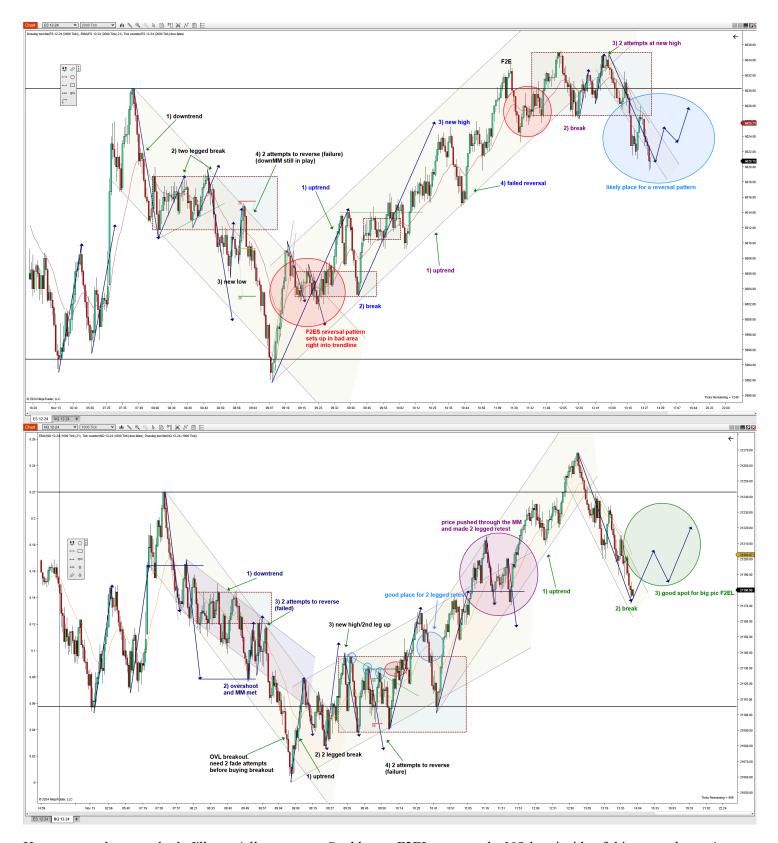

We could get a couple legs down soon on both markets. I'd like to see 2 legs to the KEP on the ES as this trend is very consistent and if we get 2 attempts to fade, we can look to enter on the failure which fits with the uptrend. Have a great day everybody.

Have a great day everbody. There was a decent looking limit order trade on the NQ today it's circled. Happened right as I was preparing to leave early so I missed it but it does look good if you can get out before the lows as it was right after a sharp uptrend expecting a new high. Could get a reversal F2ES now soon on the NQ, we have good context for it.

The YT video is uploading now. Enjoy this EOD post y'all. I hope you all had a great trading day.

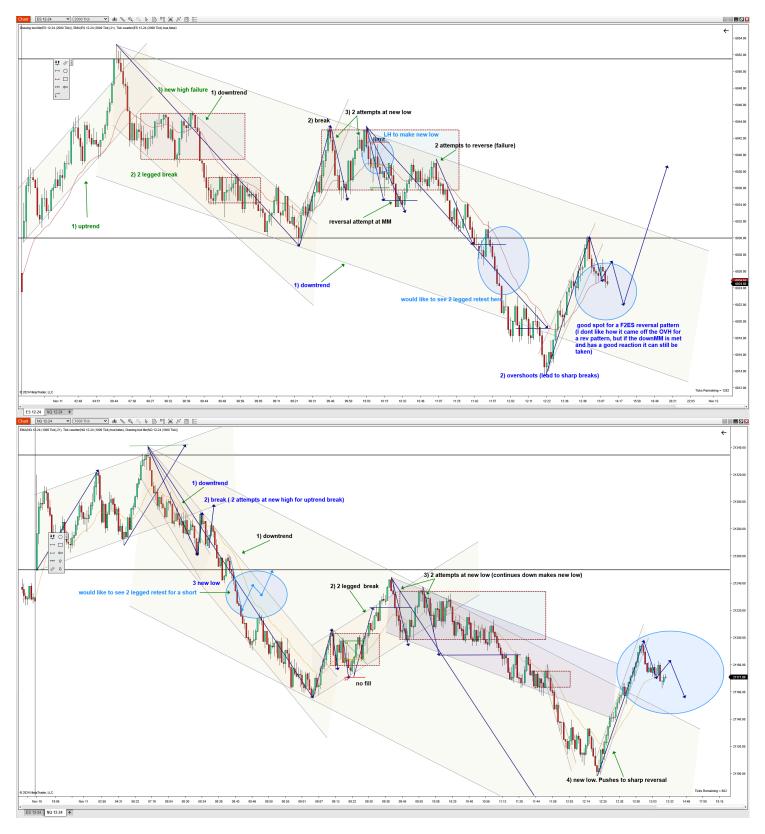

Have a great day everybody I'll see y'all tomorrow. Could get a F2EL soon on the NQ btw inside of this range that we've got forming.

I hope you all enjoy this post. On the NQ we could get something very soon. A retest of the OVL. It's pushing higher than where it is in the hoto as I'm typing but we can still get a big pic F2ES to continue the OVL fade. Have a great day everybody.

YT video is uploading. Gonna take awhile before it's out most likely because it's 40 minutes long. Didn't even realize how long went by while recording. Enjoy this EOD post y'all, I hope it helps you see the price action in a clearer light. Have a great day everybody.

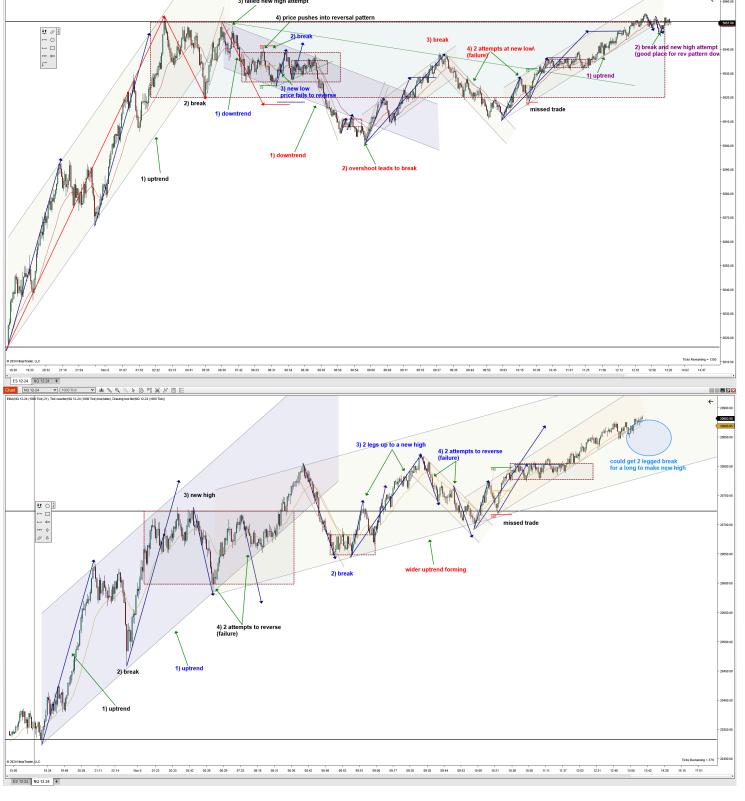

I've got the YT video uploading. Will be out soon. I hope y'all had a great trading day. I'll see you all tomorrow.

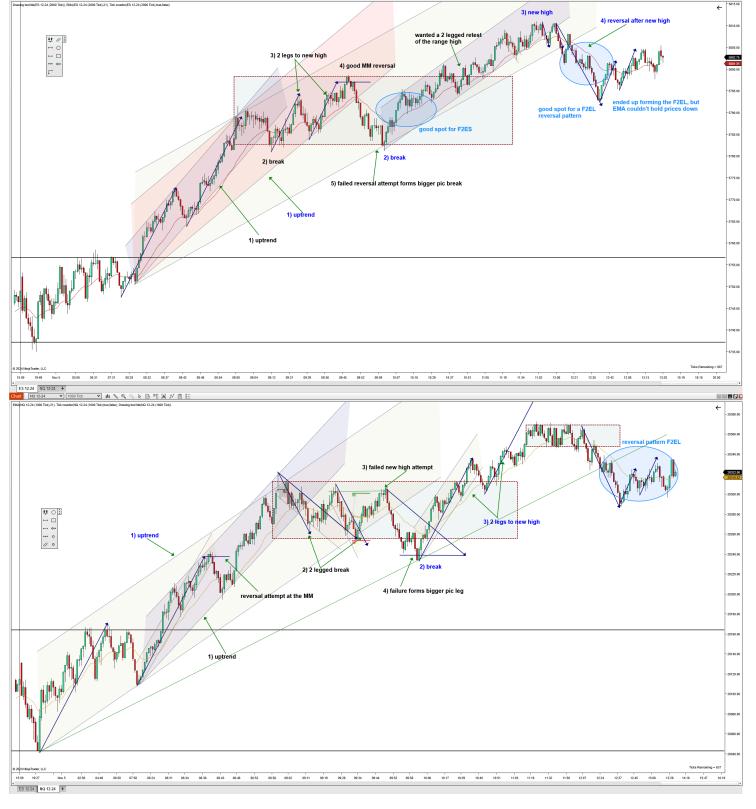

Have a great day everybody. The Friday review is uploading now I hope you all enjoy it and find it useful. The large uptrend just played out on the ES and on the NQ we are at the OVH. Both markets are in common reversal areas so keep that in mind if youre still trading.

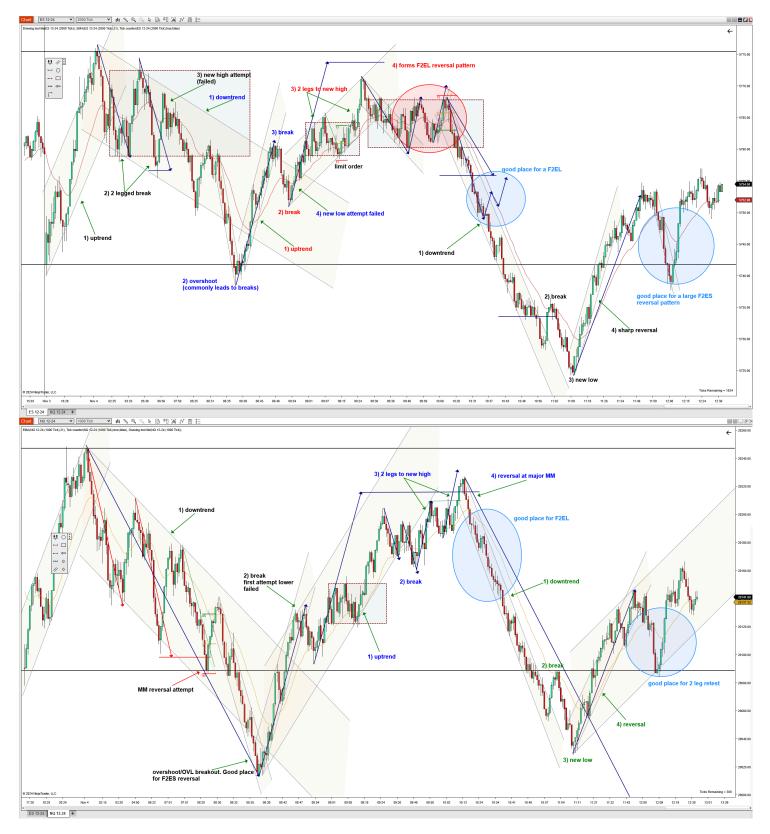

The market kinda died suddenly. There are obviously some big events in the news as of late so it's not too surprising to see the market act a bit strange. I hope you all have a great rest of your day. I will see y'all tomorrow.

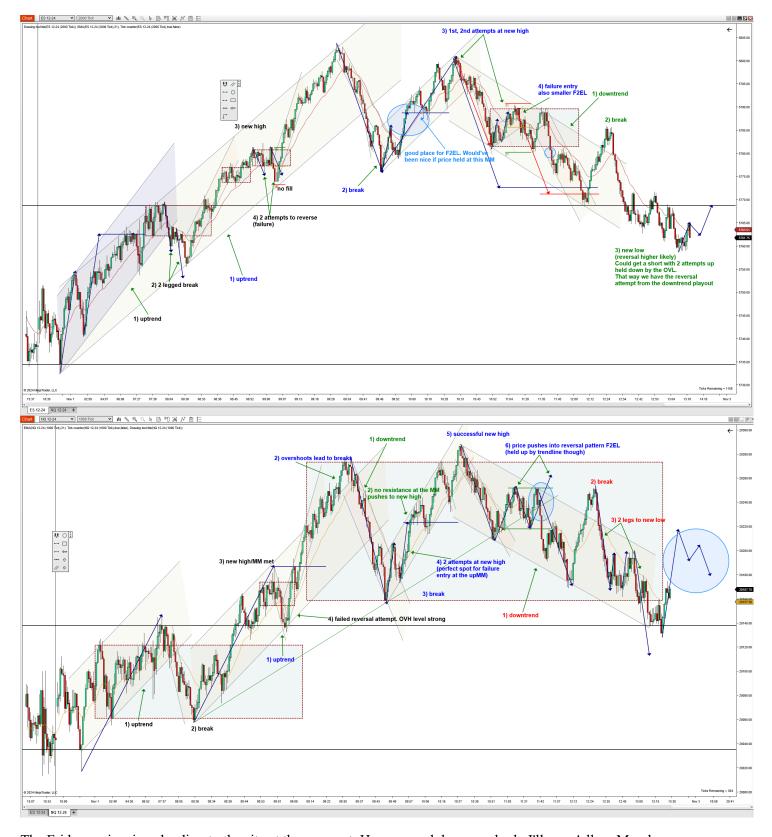

I missed a trade on both markets today. They happened at the same time on both. They are marked here. I wasn't doing perfect on updating my drawings as fast as normal. On the ES I didn't extend out the range far enough. Price was making a big fade back in and price held right on it. On the NQ, price broke out the OVH, made 2 attempts to fade, fade failed (barely pushed back in a little) before pushing up into a very strong HL. Now on the NQ price could break this thinner uptrend with 2 legs down where we can get a long.

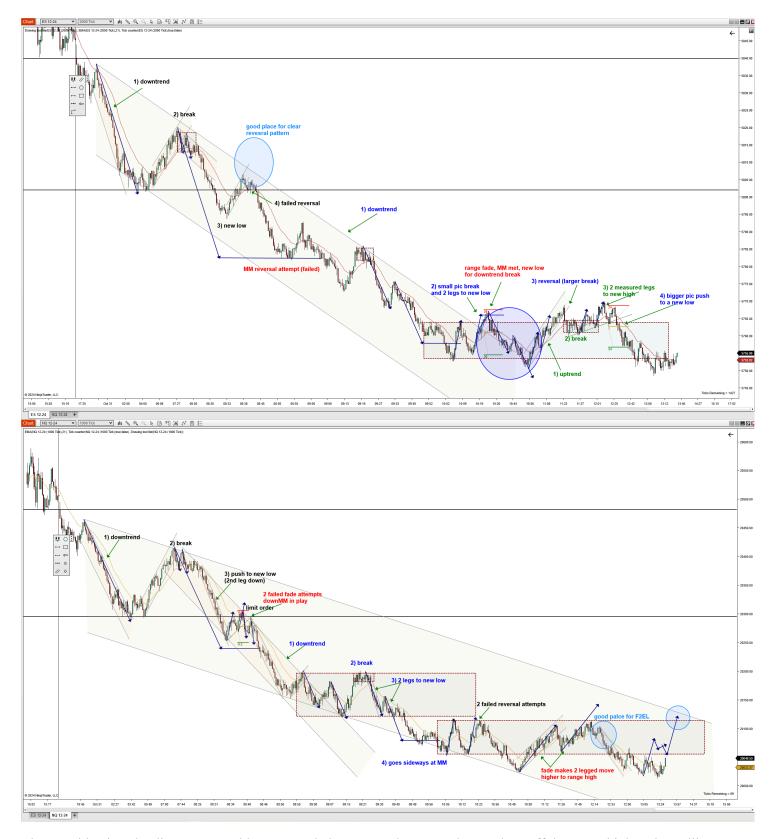

I hope you all had a great trading day. Enjoy this EOD post. I'm not able to make a video today but I hope this post helps you to see bigger picture PA. Have a great day everybody.

YT video is uploading. I hope y'all had a good trading day. I'll see y'all tomorrow.

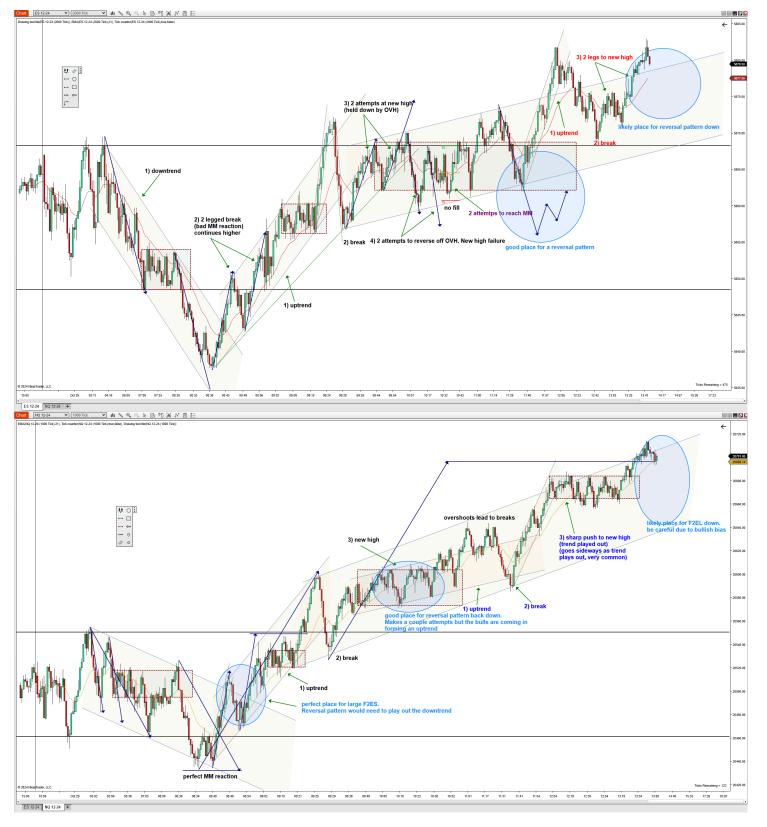

The Friday review is uploading to the site at the moment. Have a good day everybody I'll see y'all on Monday.

The YT video is uploading now. Could get a couple legs up on the NQ and get a short off the range high and trendline at the same time. Combining KEP's can be powerful. Have a great day everybody. I'll see you all tomorrow.

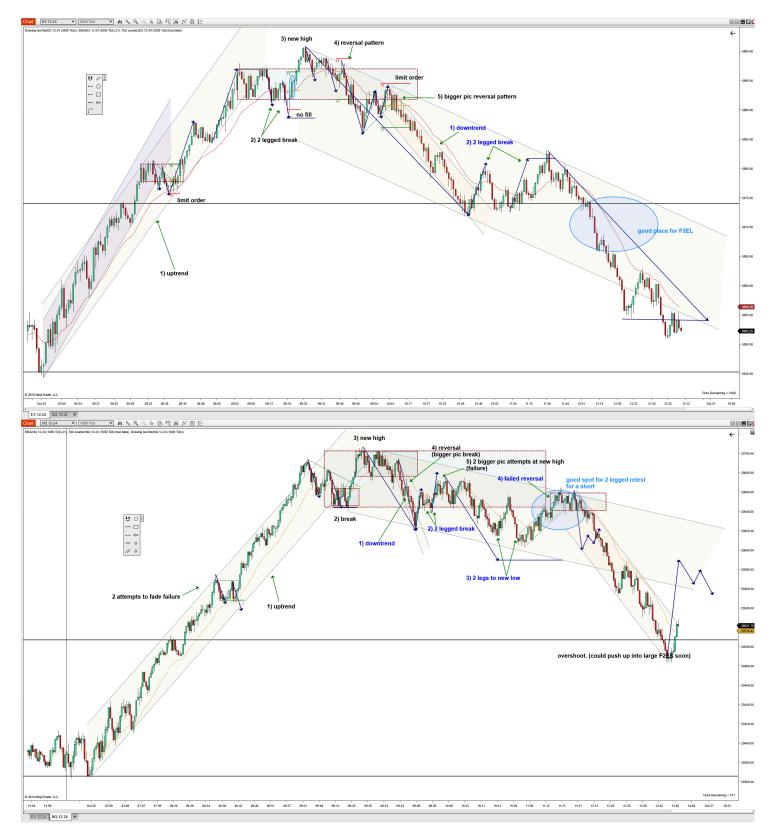

Have a great day everybody. I've got a video uploading to youtube at the moment, but it may be a while before its done uploading as it's nearly 30 minutes long. I hope you all had a great trading session. I'll see y'all tomorrow.

Have a great day everybody. We could get a reversal down soon on the NQ. Be careful shorting though we have a very clear upward bias. However, we are off the channel highs, and just met a majhor MM, so we could get a perfect reversal pattern.

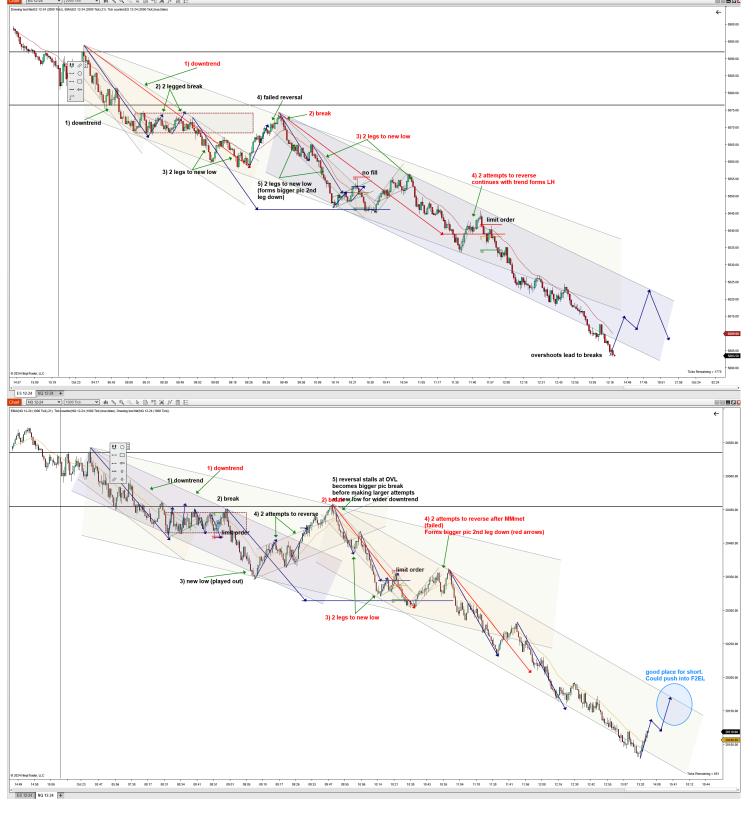

Have a great day everybody. The construction in my house is now basically done. The noise was getting bad as they started working upstairs which prevented me from recording lately. A couple minor things to do but all the loud stuff is done so I'll be getting more videos out this week. Have a great day everybody!

Enjoy the weekend everybody I will see y'all on monday. The Friday review is currently uploading to the website, I hope you find it helpful.

YT video is uploading now. We could soon get a 2nd leg down on the ES for a long entry off the OVL as the 2nd attempt at new low for te downtrend. I hope you all had a good trading session. I'll see y'all tomorrow.

Have a great day everybody. Today was a pretty good day. Got the YT video uploading at the moment so I hope y'all enjoy that. I'll see y'all tomorrow.

Have a great day. I know yesterday I said I'll try to get videos out for the rest of the week but the construction in my house is just too loud right now. Thankfully it's almost fully complete and won't be an issure very soon. Have a great day everybody.

Have a great day everyone. No video today, but I'll do my best to get a video out everyday the rest of this week. And of course on Friday for sure there will always be a video no matter what. Another dry day for the ES. This has been happening quite a bit lately. NQ has a couple good ones but nothing for the ES. Just need to be patient on days like these. Have a good day everyone.

Hi everyone I hope youve had a good trading session. I accidentally uploaded todays review to YouTube forgetting today was Friday. I've decided that I'm gonna publish it on YouTube since it's already out. The Friday reviews are meant for members only but it's already uploaded so I'm just gonna publish it. Haven't gotten a YT video out in a few days anyway so it would probably be good for the channel. Have a good day everybody.

Have a good day everybody. Still too loud to record. Luckily it will be over soon. I hope y'all are liking the hourly posts again. Price has felt a bit slow this week, hopefully tomorrow we get a better day with perfect PA. I'll see y'all tomorrow.

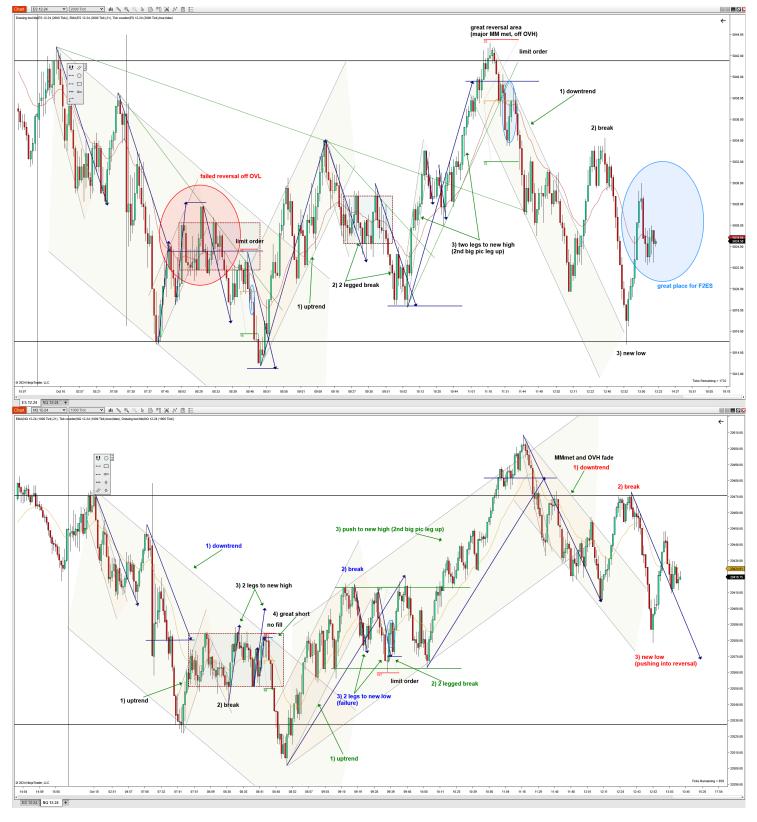

Have a great day everybody. No video today as there is now some construction being done upstairs, which is making it too loud to think at this point, so definitely no video. Replacing some flooring. I hope this post helps you see the bigger pic. On the NQ we could get a couple legs down to the lower trenldine of the current upchannel and get a long. Entry would need to close above the MM that price just pushed through

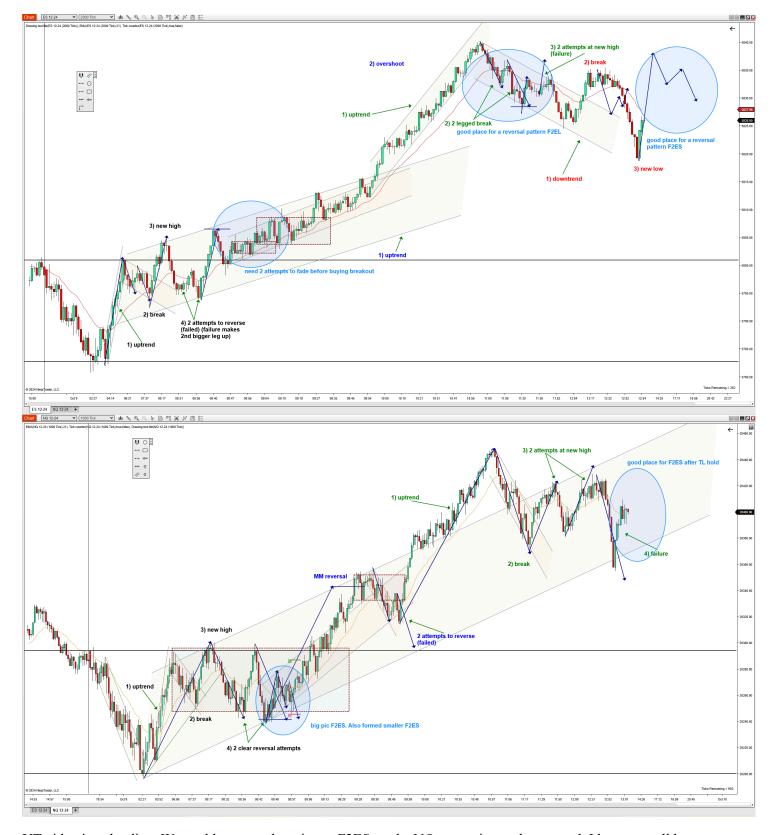

Hi y'all I've got the YT video uploading right now. Today was dry on the ES but there was a good on on the NQ. We can get a short soon on the NQ by the way. Holding off the trendline and is already a big pic F2ES. We do need to watch out for the clear triple bottom that formed at the lows of the day however. Have a great day everybody. I'll see y'all tomorrow.

Enjoy this post, I hope it helps you see the bigger picture. Got the Friday review uploading to the site at the moment.

YT video will be published soon. On the ES price is revsersing off the OVL, and is in a great place for a F2ES reversal pattern, so watch out for that if you're still trading. Have a great day everybody.

YT video is uploading. We could soon push up into a F2ES on the NQ to continuue the uptrend. I hope you all have a great day. I'll see y'all tomorrow.

Have a good day everybody. Just met a major downMM on both markets. Good place for a reversal pattern F2ES for a long soon. Have a great day everybody.

Got the YT video uploading now. I hope y'all had a good trading day. Enjoy this post everyone, I'll see you all tomorrow.

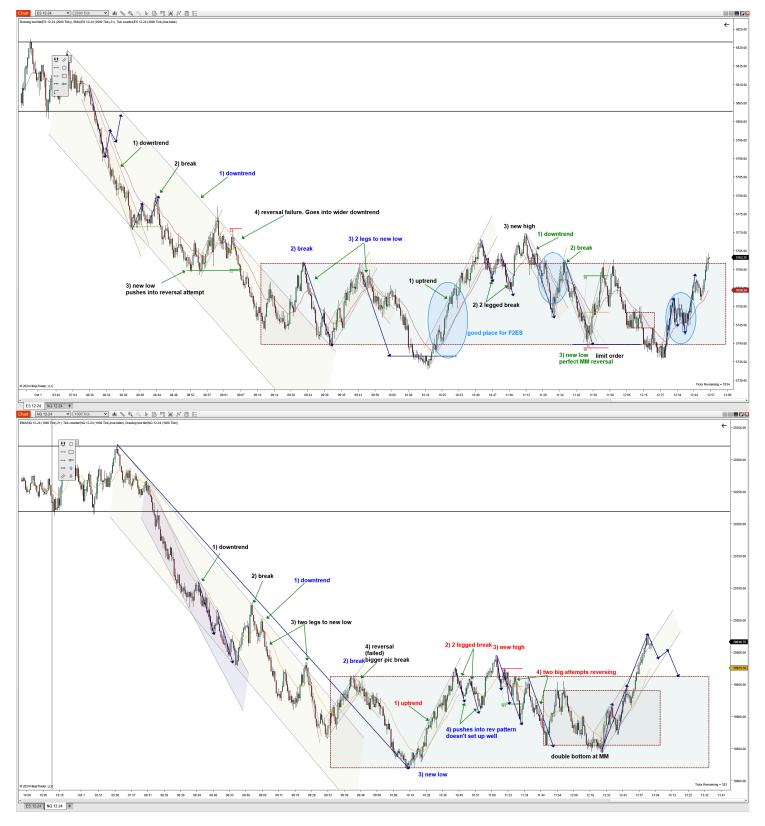

I hope you had a good trading day y'all. The video is uploading to the site right now. Will probably be out in like 30 minutes. Have a great day!

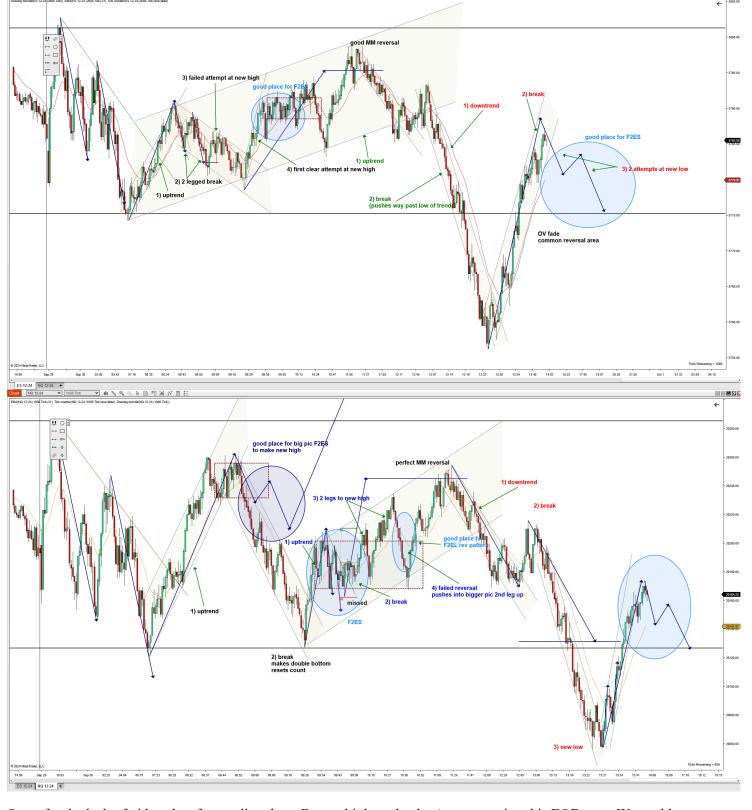

There was a reversal F2ES on both markets pushing back into the range. On the NQ, it was blocked by trendline and due to the major downMM in play I wanted something closing above the stt. A good bar closing out that triggers didn't form. The ES however, had a bit different context. The ES had just met the major MM for the day, pushing off the OVL. Perfect reversal context. I really liked it, however price began to really struggle and found resistance and is now chopping. I decided it was best to just get out. Have a good day everyone.

A good looking F2EL just formed on the NQ after fading the OVH. Price made 2 clear attempts to push back out, held down by the OVH with great bearish reaction and room to the small range low. Price is holding strong off the dotted range low and is pushing up so we may break the OVH since the reversal pattern didnt get far. Have a great day everybody.

Could easily get a long soon on the NQ on the reversal pattern that could soon set up. Ideally retesting the range high. The YT video is uploading at the moment. Have a good day everybody.

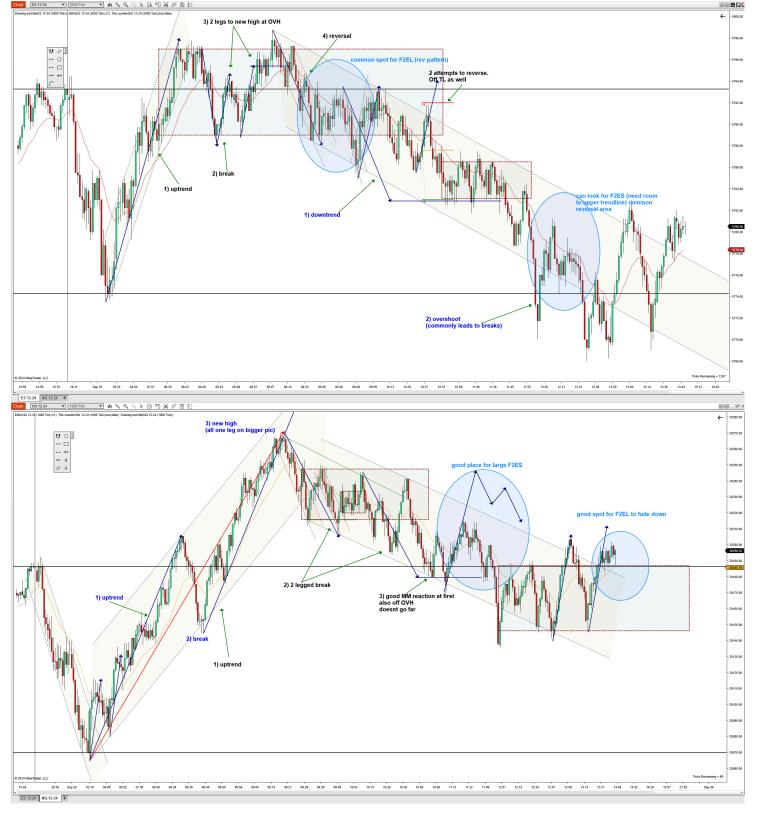

Sorry for the lack of videos last few trading days. Been a bit busy lately. Anyway, enjoy this EOD post. We could soon get a decent reversal pattern on the ES and NQ fading the OVL. Have a great day y'all.

I'm uploading the Friday review to the site at the moment. I hope you all enjoy. We are just broken out of the OVL for the NQ at the moment. We could form a F2ELholding below the OVL for a short to make the 2nd leg down for the new low for the downtrend break. Have a great day everybody.

Today was pretty slow on the setups. This whole week has felt pretty slow. Either way it's still good to study the slower days and learn how to trade them. I hope you enojoy this post. Have a good one everybody I'll see y'all tomorrow.

Could get a short soon on the NQ. It is somewhat of a big pic F2EL due to the 2 legs up breaking the downtrend. I'd like to see price fade into the dotted range, then form another short entry under the EMA like a smaller F2EL. I hope this post helps you see the bigger pic structures. Have a great day everybody.

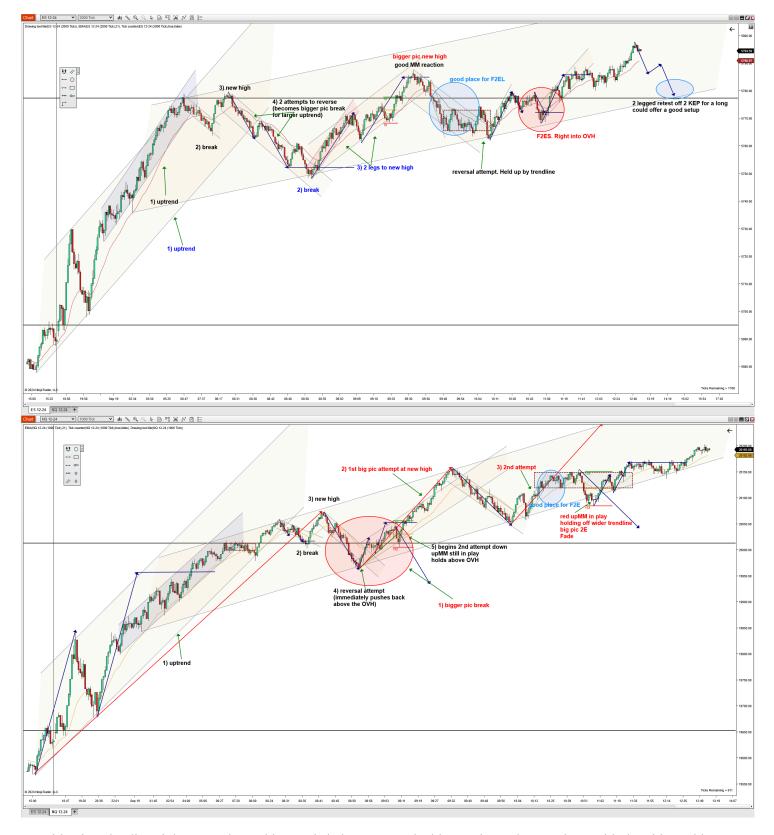

Hi everybody I've got the YT video uploading right now. There is a big pic F2ES forming on the ES right now which could offer a long very soon. Could break the dotted range lows and get a good fade reaction. Have a great day everybody.

Hi everybody I hope you had a good trading day. Today was quite the range day. Both markets are fading up into range. Could form a F2ES reversal pattern holding above the trendline for a long. Video is uploading and will be out soon. Have a great day everybody.

I hope this post helps out, along with the video. On both markets, the main downtrend for the day has broken and looks like price could make a new low. The NQ is backabove the OVL, but the ES is not. Could retest and make 2nd leg down, which price could offer a short on the way down. Have a great day everybody.

YT video is uploading right now. I hope this post is helps you see the bigger picture better, along with the video. This uptrend on the NQ is losing steam, price is struggling to reach the channel high so it may break soon. Could get a large F2EL reversal pattern and get a short on the way down to the OVH. Have a great day everybody.

Today was a bit slow. FOMC days tend to be like that. At the end price went absolutely crazy as you can see. Price could soon make 2 attempts at new low for the downtrend that formed during the news. No video today, sorry y'all just a bit busy. Have a great day y'all.

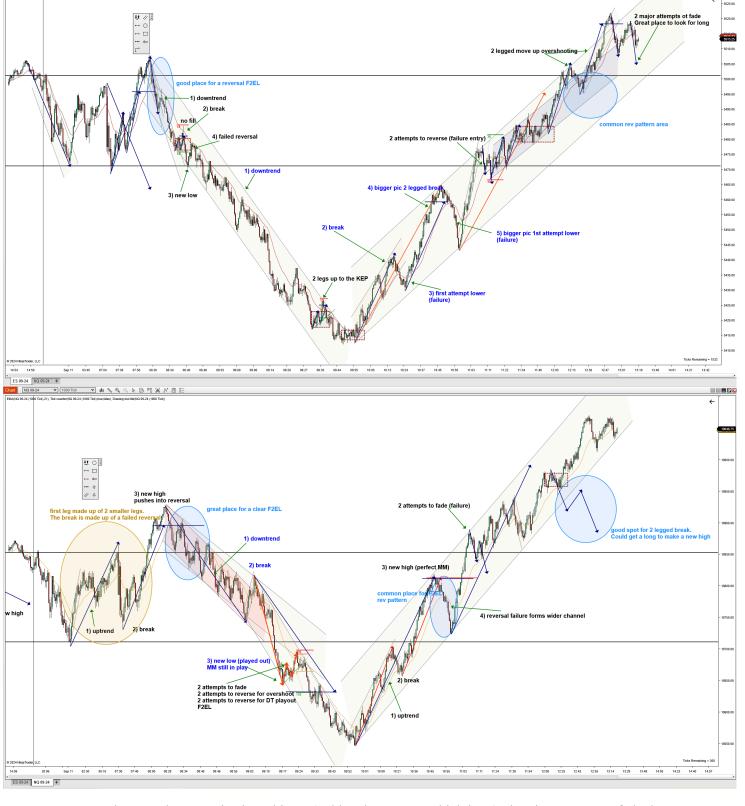

Hi everybody I hope you are having a great day. Both markets are fading back into the OVL at the moment. Good place for a reveral pattern, just need to make sure it'sets up well enough to counter the wider downtrend, meaning having 2 clear attempts at a new low. The YT video is uploading right now and will be out soon, I hope y'all enjoy.

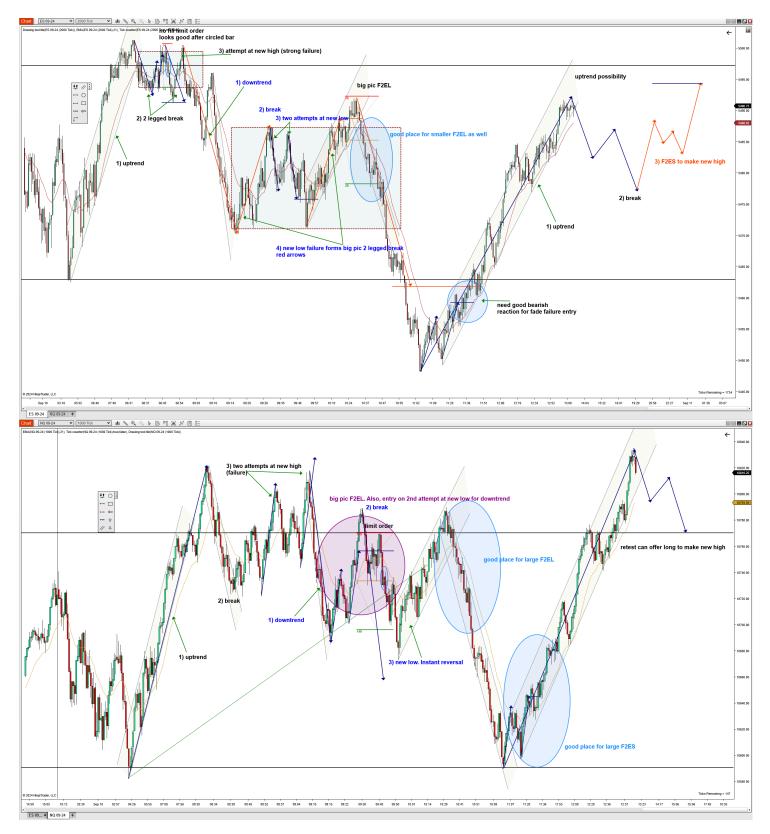

We could soon push into a F2EL on the NQ. Currently retesting the OVL. If price holds to the low side we can soon get the reversal pattern. On the ES, price is at the OVH while overshooting the wider channel. Both markets are in a good place for a F2EL, even though they have different context. Have a great day everybody, the YT video is done and uploading now.

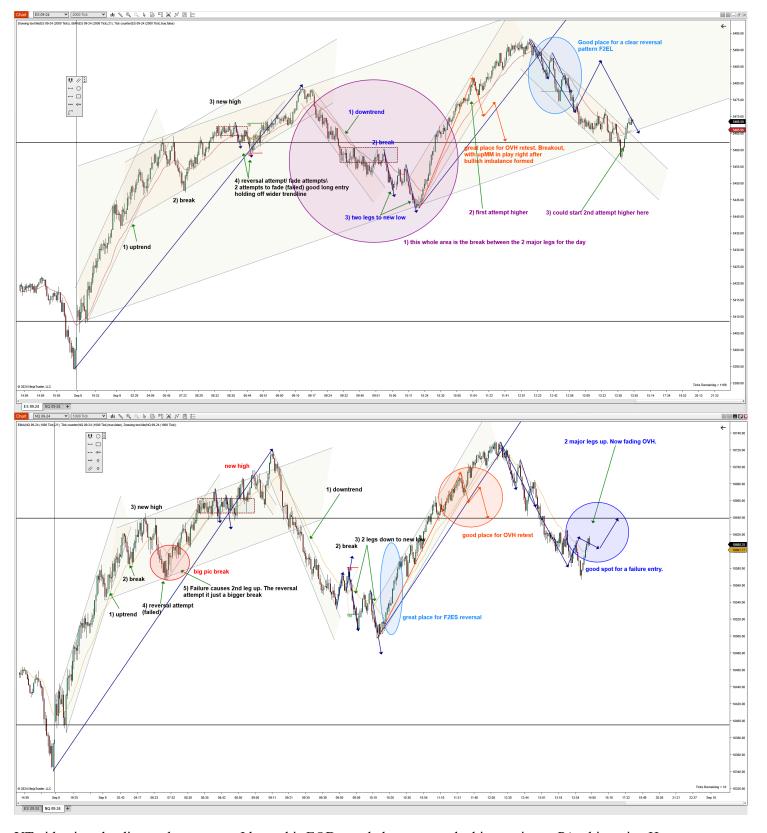

Todays chart review is uploading to the site. I hope this post helps you to see the bigger picture structures, and learn to spot them in real time. A good example of watching structures get bigger picture is on the NQ, the uptrend pushing out the OVH makes a new high, 2 attempts to reverse, offers a good long entry (failure entry) which pushes price into a 2nd bigger pic leg to a new high. Video will be out soon. Have a great day everybody.

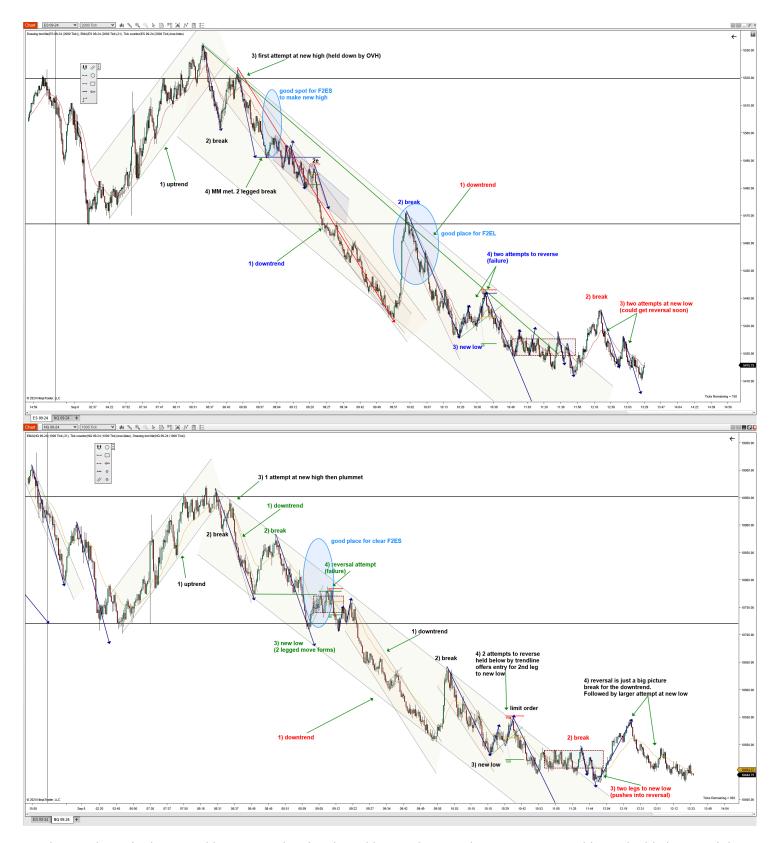

We can soon get a long on the ES. Price is making a 2nd leg down now, which is a 2nd major attempt to fade the OVH where we can look to get long on the fade failure. YT video is uploading now and will be out soon.

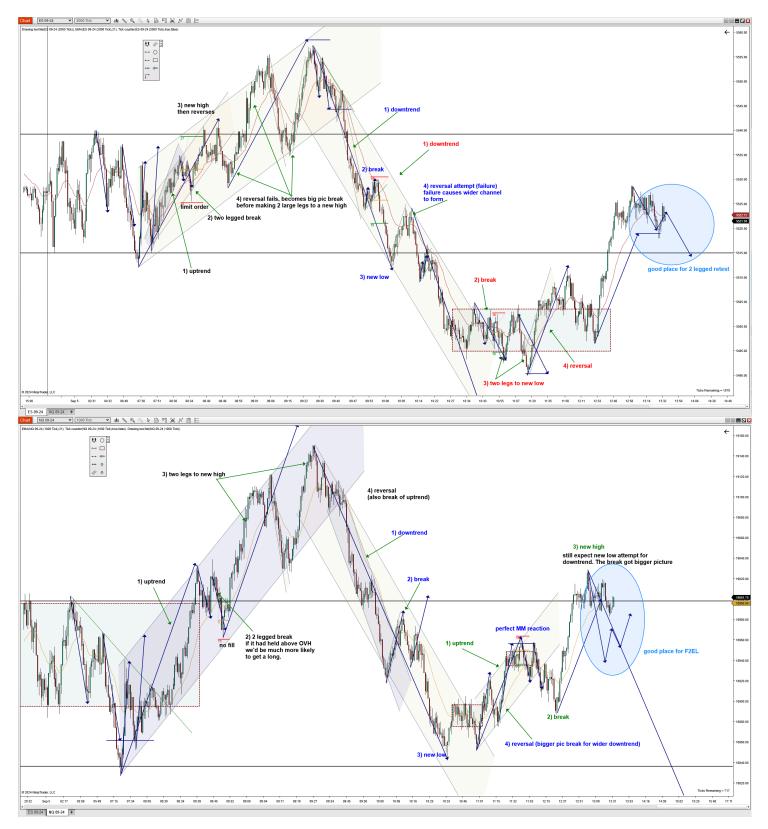

Enjoy the EOD everybody. I've got the YT video upoading at the moment. Just a reminder, on Thursday the 12th my power will be shut off due to construction so I will not be trading and Penguin Trades will be closed. I'll still make a EOD just way later when I get the power back. Have a great day everybody.

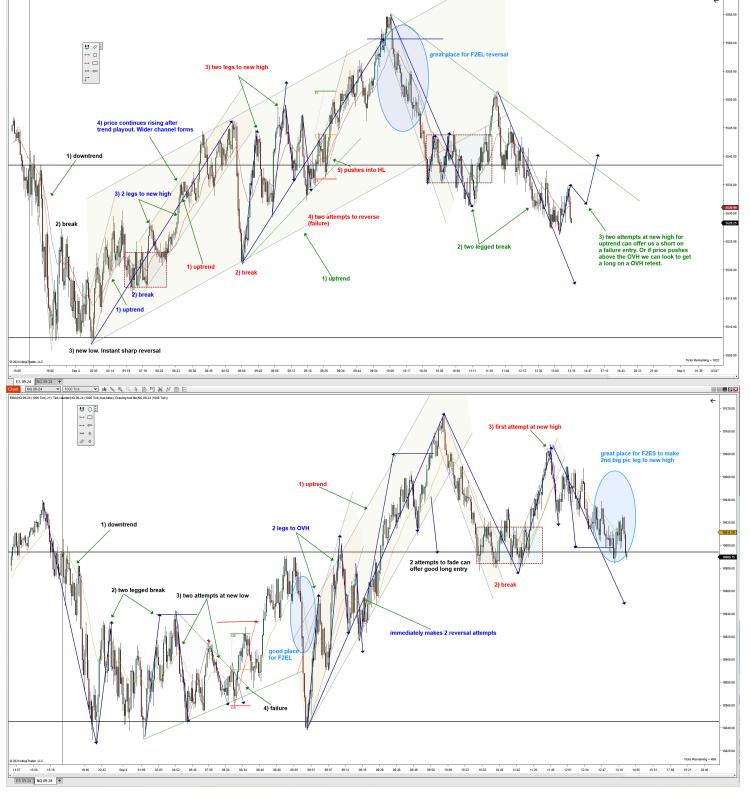

YT video is uploading at the moment. I hope this EOD post helps you see the bigger picture PA a bit easier. Have a great day members.

On the NQ the main downtrend has a very clear break, and has made a new low attempt. Its making a double bottom right now, but if we get another 2 legged move higher we can get a short soon. The Fridayt review is uploading at the moment. It'll appear in the catalog shortly. Have a great day everybody.

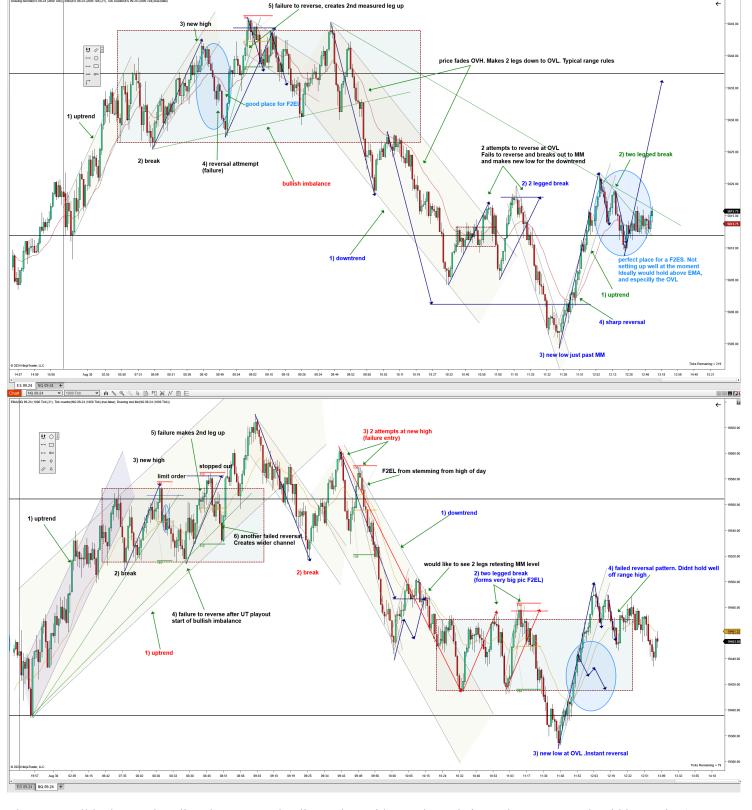

Hi everyone todays video is uploading to youtube. May be awhile before its out as it's 30 minutes long and will take a while to upload. Right now we could soon get a large F2EL on the way down to the OVL coming off the OVH for the NQ. Right at a big pic 2 legged break for the downtrend so this could happen soon. Have a great day everybody.

I only liked 1 on each market. On the ES we can very soon get a 2 legged retest of the OVH to continue the fade down and reach the downMM. as for the NQ we are just now pushing back into the OVH. Unless bears start coming in, price could easily push into a F2ES. The uptrend attempting new high is fighting the OVH fade, so stick with what price is more leaning towards.

The video is uploading at the moment and will be out soon. Today was pretty dry so dont feel discouraged if it was a stressful trading day. Some days are just like this. Have a great day everybody.

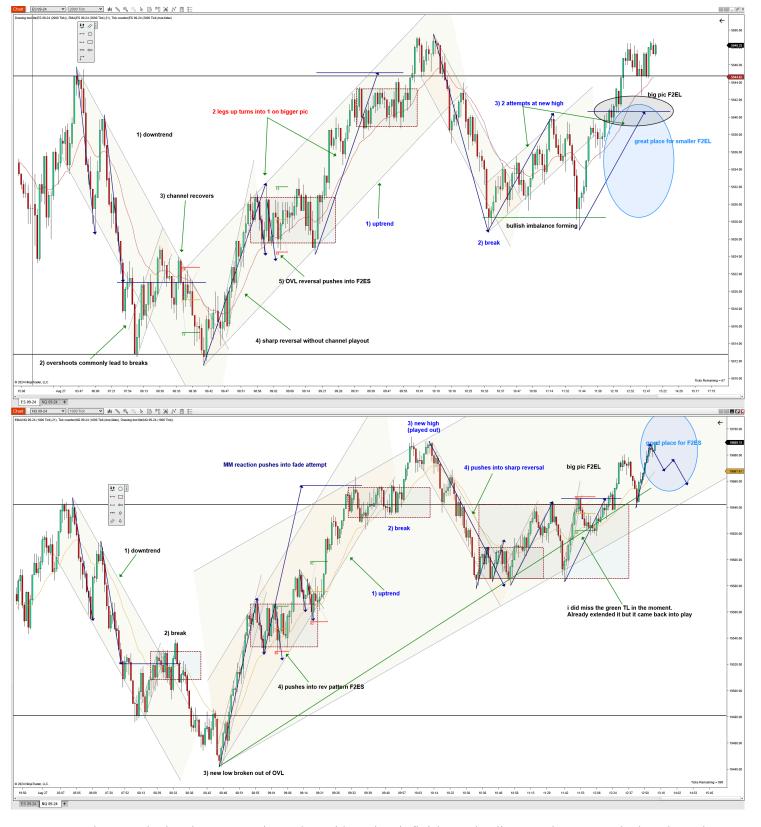

I hope you all had a good trading day. I am uploading todays video to the website at the moment. Should be out by 2 cst. I'll make a post on the main community section when it's published. Have a great day everybody.

Have a great day everybody. Youtube video will be out soon. We just faded the OVH on both markets so I'd want to see 2 clear legs retesting the OVH. Even if it doesnt retest I mainly just want a very clear F2EL that closes below the EMA. Could happen soon so watch out for that. Have a great day everybody.

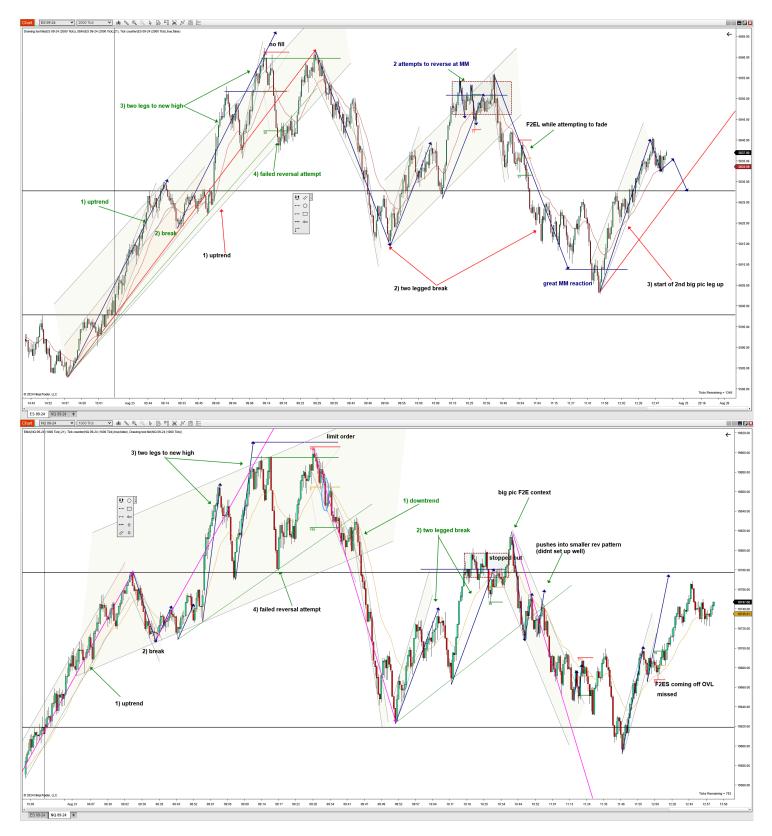

Just now reaching this downMM on both markets. On the NQ we're pushing off a wider trendline so we could get a long soon. Could push above EMA and form a F2ES soon. Video is uploading to youtube at the moment. Have a great day everybody.

Have a great day everybody. I hope you enjoy todays video when it finishes uploading. On the NQ, on the last short, there was a green trendline that I removed after the swing had pushes through it and didn't consider it in the next short. It did end up coming back into play and didn't catch it as the reason for sudden reversal higher in the moment. I should have considered it though due to the clear bullish imbalance that had formed. I would gone in a couple tick early to be safe had I caught it.

Have a great day everybody. I've got a video uploaded to YT, about to publish it. We could very soon form a reversal pattern on the ES. Price is pushing towards the OVL in a fade attempt so we have good context to get a long. Just need a clear setup.

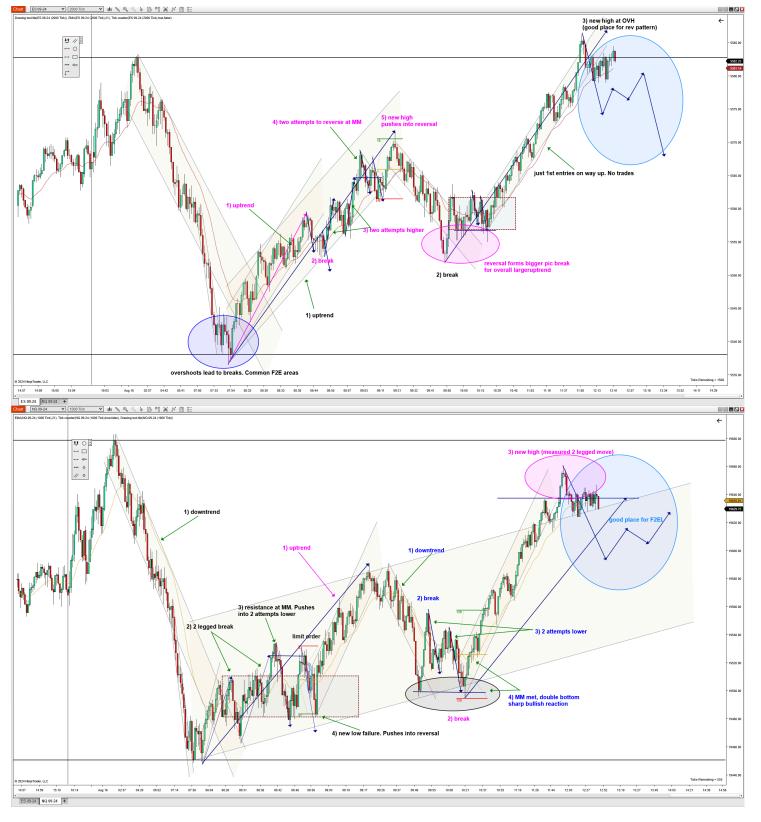

I'm uploading the Friday review too the site right now. Will be out by 2. Today was a good day for both markets. On the ES the MM's at the beginning were a bit confusing so I go over that a bit at the beginning of the video. Have a good day everyboody.

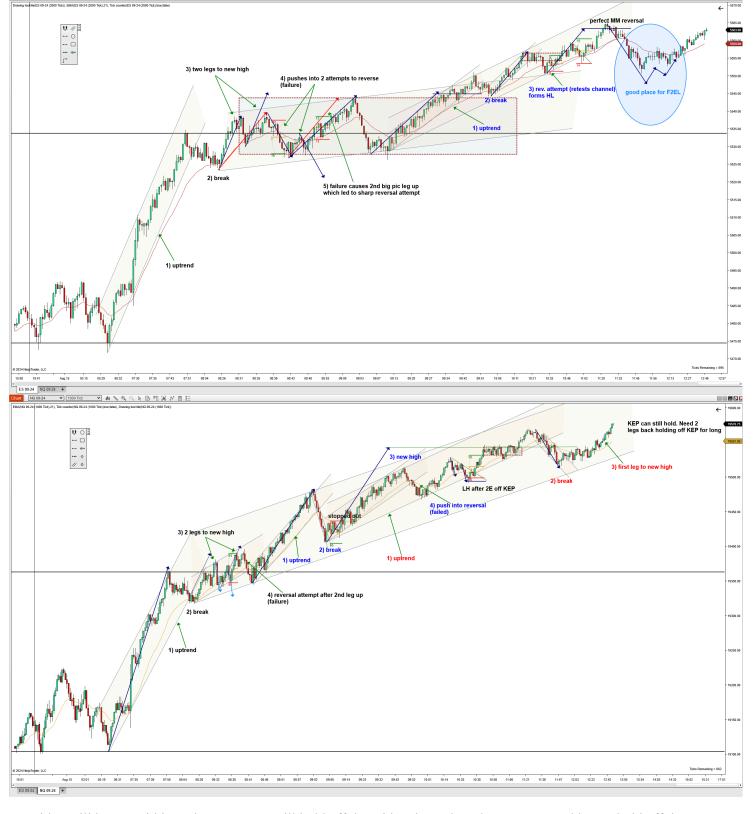

Have a great day everybody. YT video is uploading now. Price is just a couple points from reaching a major downMM on the NQ and ES. Price can easily push up into a sharp F2ES reversal pattern. The main downtrend is played out on both markets. If price really struggles to reverse, then we are likely going into a wider downtrend.

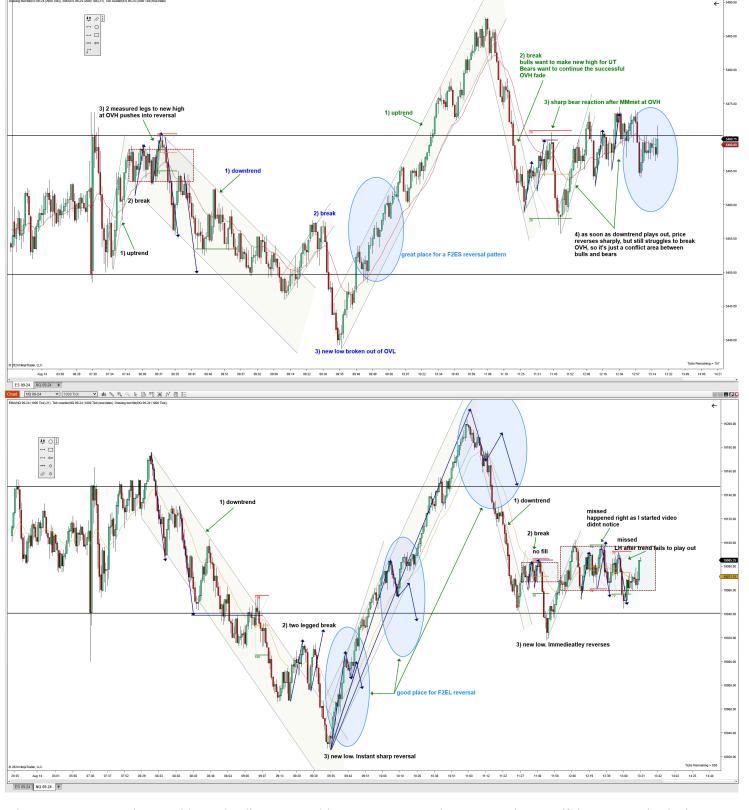

We could very soon get 2 big attempts to fade the range on the NQ. A good retest long would be nice to see. On the ES price is much further broken out but we could still get something similar, but I'm thinking we could get a good reversal pattern on the ES soon as well since it's coming off the high of a channel. A video will be out soon y'all. Have a great day everybody.

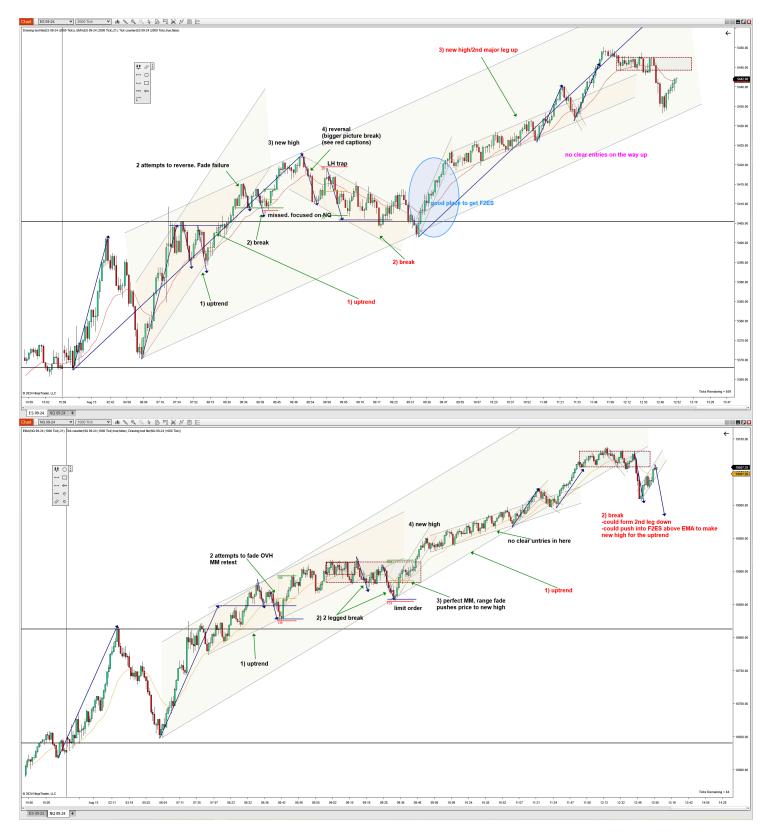

Video will be out soon. We can very soon get a reversal pattern on both markets. Each have a bit different contexts, but both are good for a clear F2EL reversal pattern. Have a great day everybody.

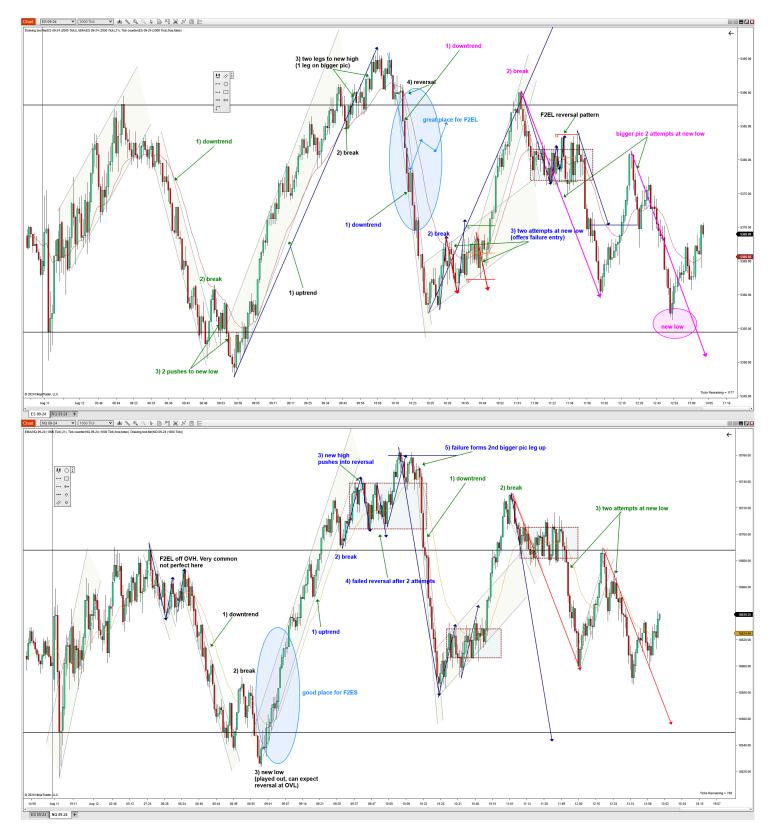

YT video will be out within an hour. We can still hold off the wider channel on the NQ. We could soon hold off the KEP again, we just need 2 clear legs down for a long entry. Have a great day everybody.

Hi everyone I've got the YT video uploading. We could soon get a reversal pattern on the ES off the OVH. Price had a sharp reversal after the downtrend played out, but struggled to get above the OVH, which means it could easily hold and we can get in on the fade. Have a great day everybody.

Video uploading, will be out soon. We just broke the major uptrend on the NQ, wouldn't be surprised if it forms a 2nd leg down. I'd like to see that, then a push above EMA forming bigger pic F2ES for a long to make a new high for the uptrend. On the ES, we could get a 2nd leg down to the KEP soon and get a long off the KEP. Have a great day everybody.

Have a great day everyobdy. I'm uploading the youtube video for today at the moment, will be out soon. From the high of day (on both markets) price formed a very big pic F2EL. On the NQ it retested the OVH with good bearish reaction. I wasn't focused in the moment as I was making video during the retest but it looks good on the NQ.

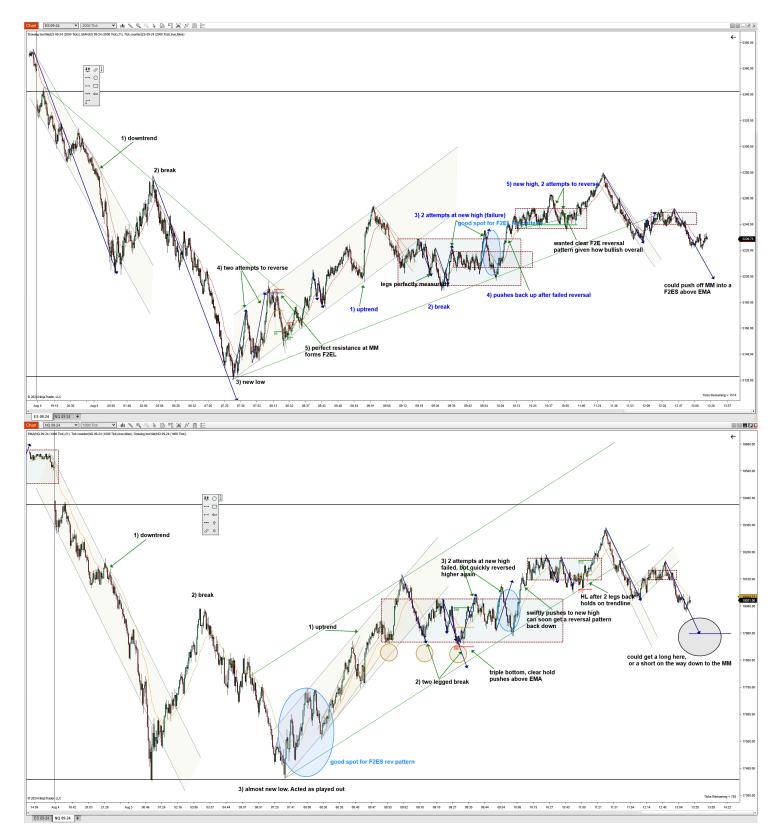

Got a video uploading at the moment. I hope this post helps out with seeing the bigger picture. Have a great day everybody.

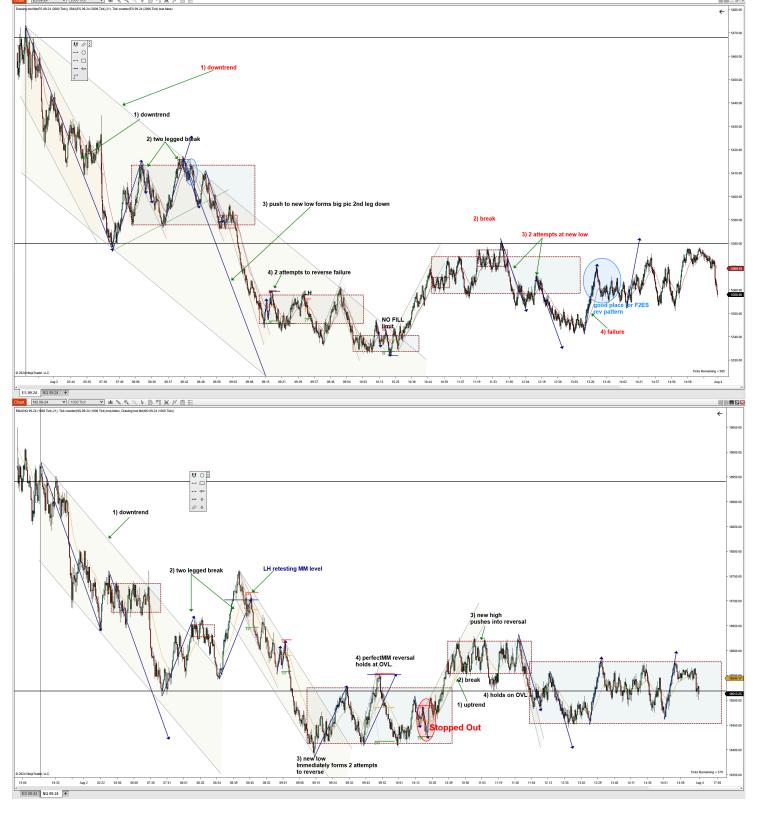

Hi everyone I hope you have a great day. I've got another video uploading at the moment, so I hope you enjoy it and find it helpful. Also watch out for a reversal for both markets soon. We've nearly reached the major upMM for today.

There was just a good looking short on the ES. I did miss it. It would have been best to use a limit order on the trade due to the range. There 2 major legs up, followed by the smaller MM that was met before sharp push down. Other than that nothing for me on the ES.

On both the ES and NQ we could get a short on the way down to the current active MM. If we get nothing on the way down, we could still bounce fof the MM level then push into a F2ES that holds above the EMA, so we'll see what happens. Have a great day everybody. I will make a video on today's price action either later tonight or tomorrow early in the morning. I've got a doctors appointment so I can't at the moment but I'll see you all tomorrow.

Have a great day everybody. I hope you find this valuable. I got stopped out on the NQ, but with a day like this that isn't really a big deal. We had just formed a triple bottom under the OVL and had a sharp push off towards the OVL. The OVL acts like a magnet, so I should have waited for a more significant 2nd leg up, as it wasn't big at all, and could therefore make a 2nd attempt at new high using the OVL as a magnet. Which is what happened and I got stopped out. Stuff like this happens. Not a big deal as long as you don't let it get to you. I had a great day on the ES and NQ so after that loss I was just done.

Today was good on both markets. The major downtrends on each market has played out. Right now price is sharply reversing higher, so it's possible a F2ES reversal pattern could form so watch out for that. It'd have to be very big pic for me to enter given how bearish it is right now.

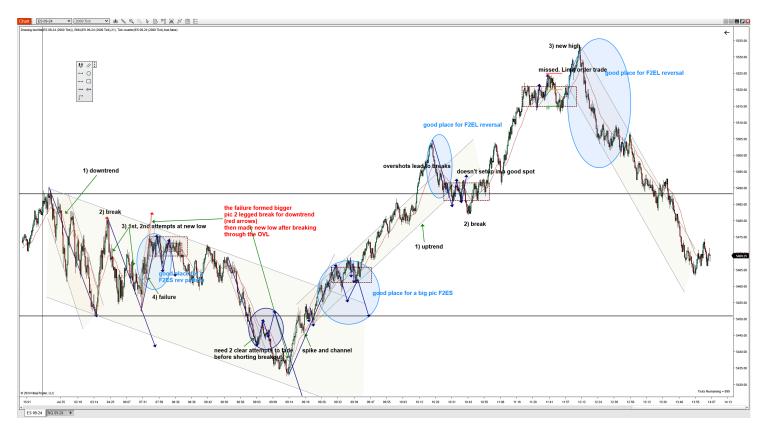

Today was a pretty good day for both markets. We just retested the OVH on both. On the NQ we could still make a good F2ES pushing off the OVH. Less likely to set up as well on the ES due to the 2 clear legs up already. Have a great day everybody.

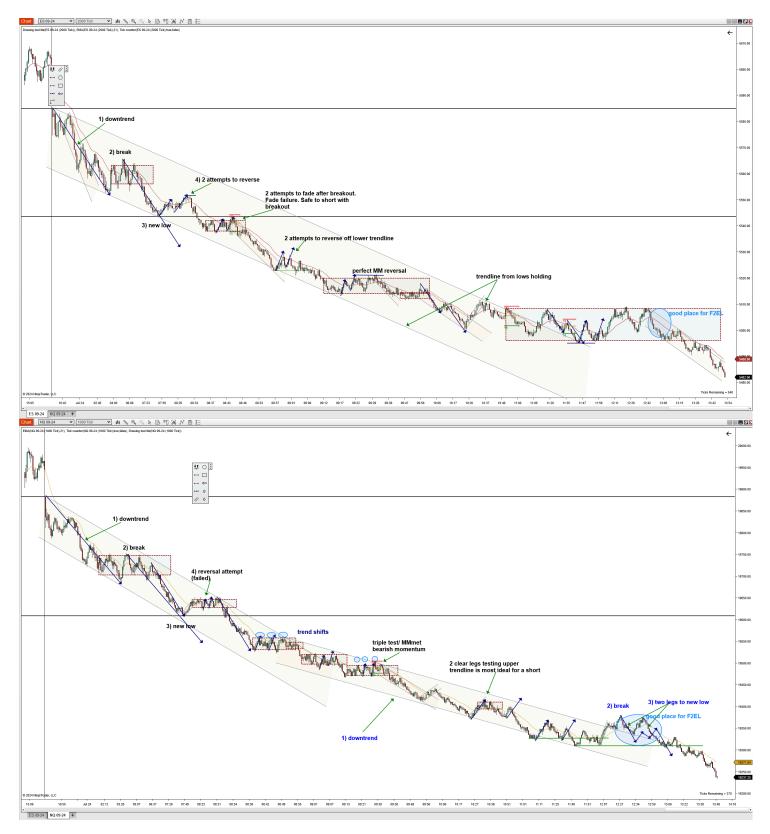

We could get a short on both markets soon. The downtrend has a break on the ES so price could attempt a new low. I'd like to see a clear 2 legged break, possibily retesting the OVL. On the NQ, the small uptrend could have a break to new high at the downtrend KEP where we can get a short. Have a great day everybody.

Today was better on the NQ, but there was a good ES trade at around noon. It also setup on the NQ but I only got it on the ES. On both markets we are getting 2 legs down at the moment. Choppier on the ES, but we could push lower to the OVL where we could get an F2ES on the way back up. Have a great day everybody.

Hi everyone I hope you had a good trading day. I started getting sick this morning not too bad at first but I stopped trading early today. No trades for me, after a while I was only looking at the ES because switching between both markets was making my headache worse lol.

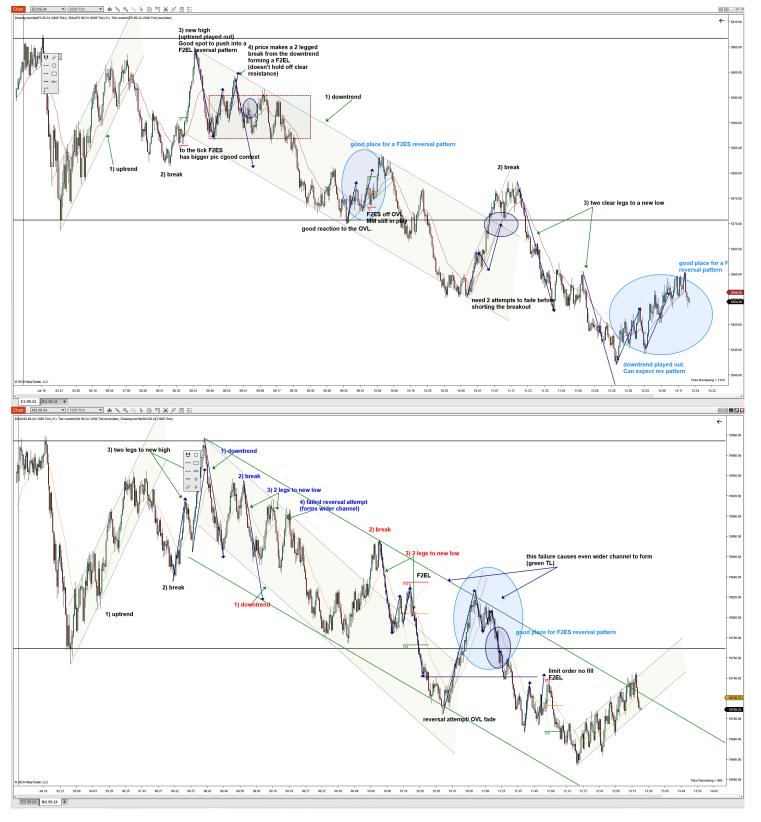

Today was quite the bear day. More opportunity on the ES today than the NQ. Youtube video is uploading at the moment so I hope that helps out along with the eod. Have a great day everybody!

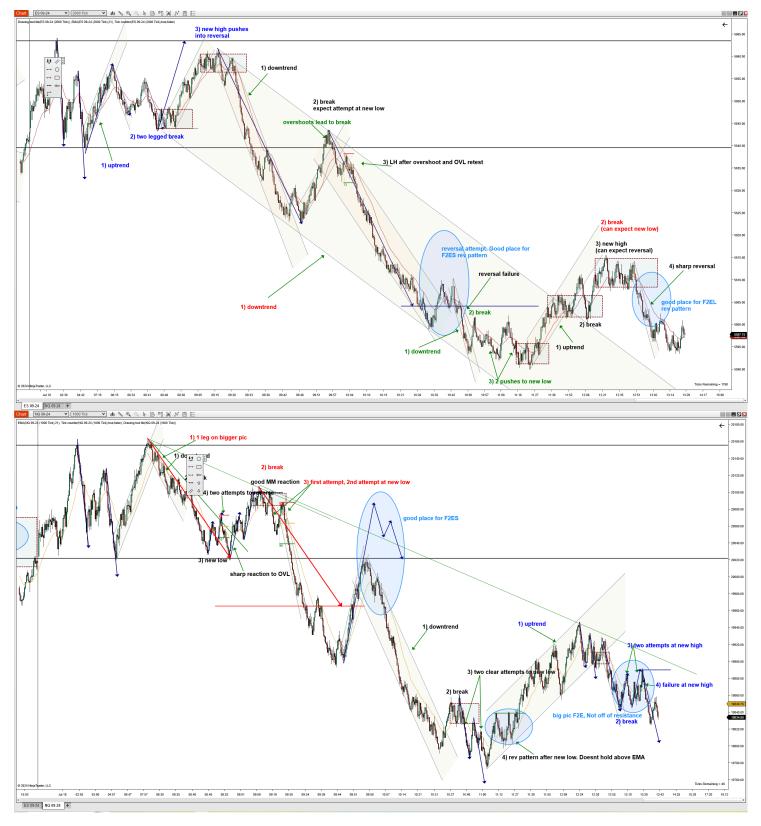

I missed a trade on the NQ in the moment. I like it with a limit order but it was at a bit of a tricky area as the OVH was messing with us in that range. After that there just wasn't anything really perfect. On the ES however there were a couple good ones. Just now pushing off a OVH retest so we could get a short soon on here. Have a great day everybody.

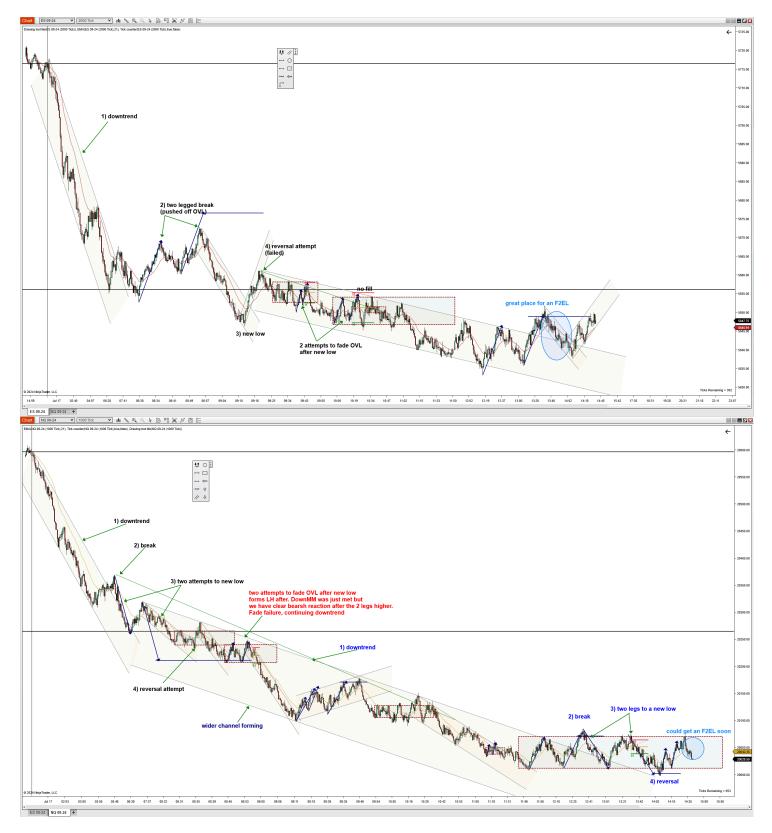

Price could make a big pic new high very soon on both ES and NQ. The ES does have 2 major legs back though and the NQ hasn't yet made the 2nd leg down. On ES price could make a smaller F2EL after pushing back out of the OVH which would fit with the expected new high for the uptrend break.

Have a good one everybody. I'm looking at the NQ right now and we are coming off the green trendline from the wider channel. We could very easily push into a F2EL which would include the 2 attempts at a new high for the uptrend break which means we could get a short entry soon.

Have a great day everybody. The NQ had some great movement in the 2nd half of the day but price just didn't make anything quite perfect. There was an area near the lows that price formed a rev pattern at, but due to the bearishness it wasn't quite able to hold above the EMA, which is not ideal for a reversal from such a bearish day.

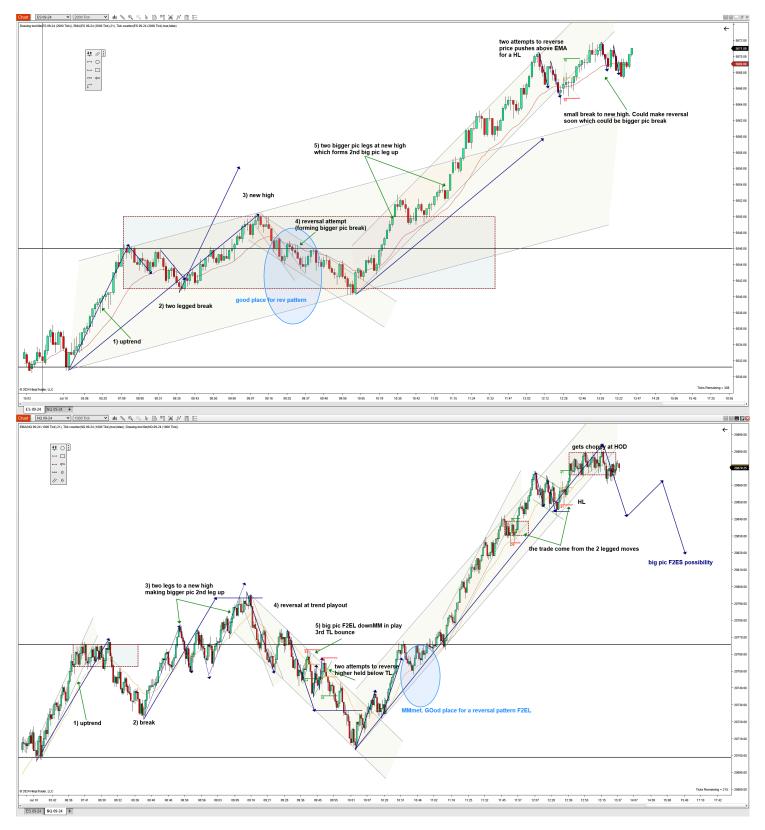

I hope y'all had a good day today. I've been waiting on a F2EL to form on the NQ but I'm calling it for the day now. It could still form, and if it forms well we could get a short soon. Holding off the range highs again we can expect a 2nd leg to the other side, and with a 2 legged correction that would form a good looking F2EL. With how bearish today was we have great context for it.

We've got a major upMM for the ES still in play. Just got this spike up above the EMA, hopefully we can get a 2 legged break making a large F2ES to reach the upMM. On the NQ we've just faded and gone past the upMM, but if we get 2 clear attempts to reverse that hold on the OVL, we can get a long on a failed reversal using OVL as support.

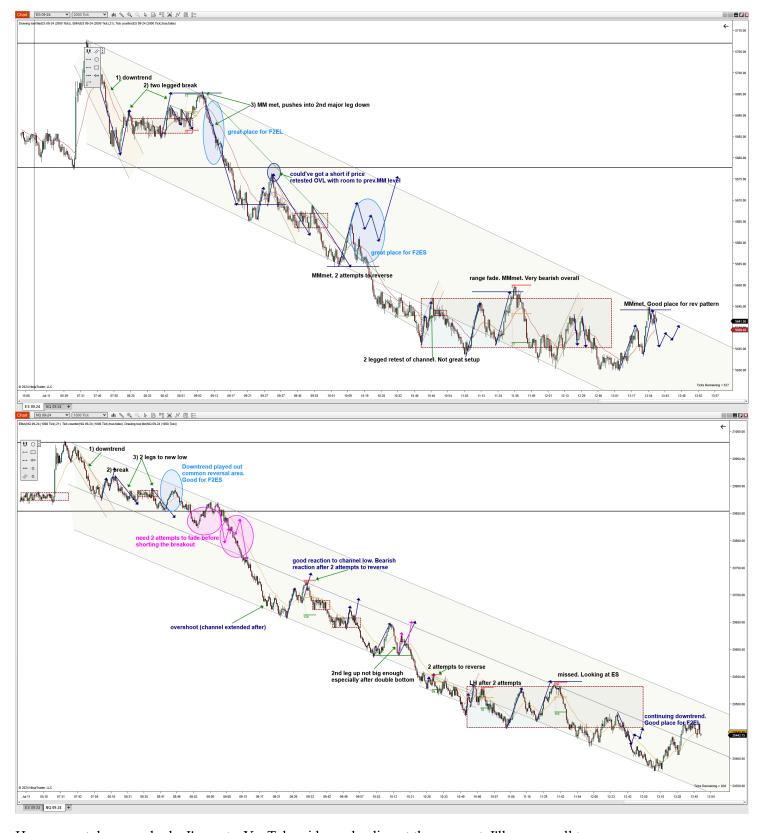

Hey y'all I have a video uploading right now. It would have been out already but I had to redo a 20 minute video because my mic was on mute. On the ES we could get a big pic F2EL setup soon off the range high. The uptrend played out so we have good context for it to go short. I wish I got filled on that NO FILL on the NQ, that would changed my day a lot. Have a great one everybody, I'll see you all tomorrow.

Have a good one y'all. Got todays YT video uploading at the moment. Today was a great day on the NQ. We could soon push into a F2ES on a big pic. See y'all tomorrow.

Have a great day everybody. Kind of a slow day. On the ES there was nothing for me, but on the NQ there was something at the very beginning and at the very end of the day.

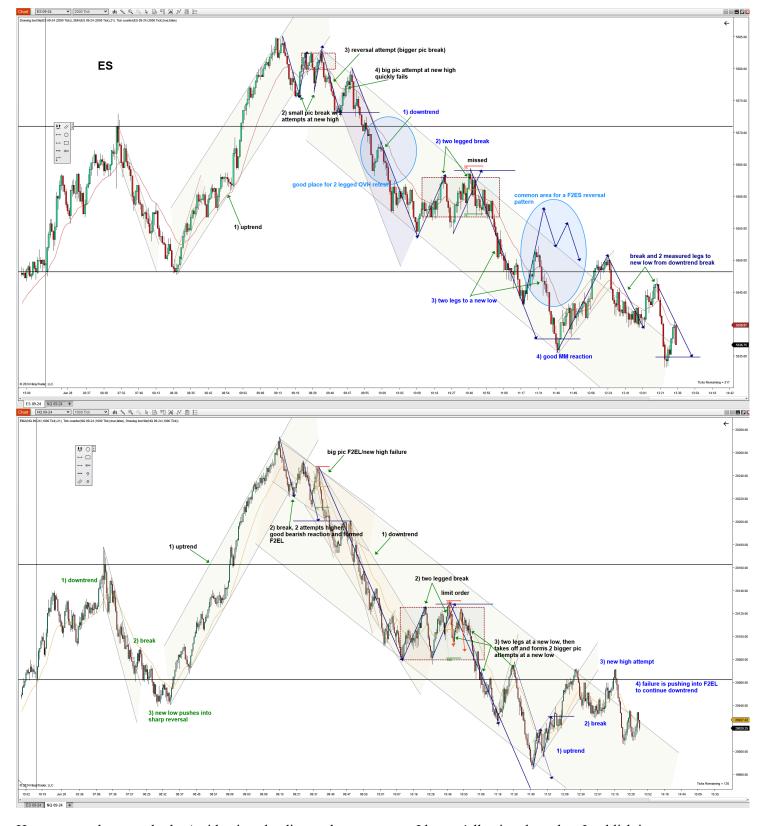

Have a great day everybody. I've got a YouTube video uploading at the moment. I'll see you all tomorrow.

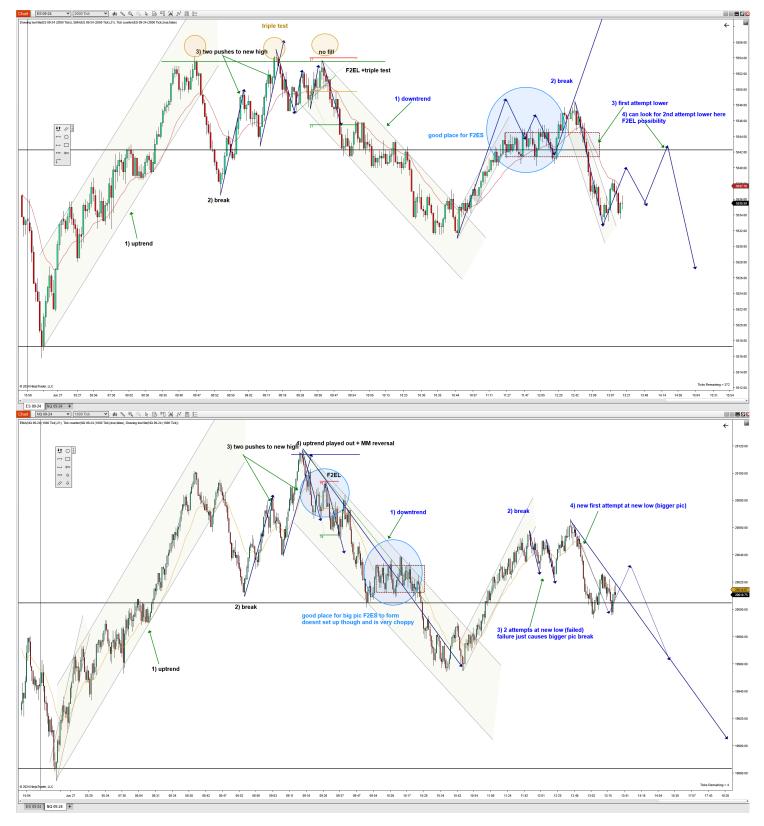

Have a great day everybody. On the NQ in the green circled area, I was wanting a short entry as we had good big pic context, but by the time we got a good looking bar, that massive red bar, we'd need a limit order so far back it goes above OVH, which is not ideal plus the 1:1 target would have been surpassed already making it not the best idea to enter especially cuz we need room to the TL. Also we could soon make a F2EL to continue this downtrend. I'll see y'all tomorrow.

Have a great day everybody. I only saw 1 trade I liked all day and it was on the ES. Price had a clear triple test although there was clearly more support there from the swings nearly reaching it within the OVH session. Sharp bullish reaction off the OVL at the MM and triple test so I really liked that there. Right after target reached there was a sharp push down I was hoping it'd push into a F2ES for another entry but it just took off.

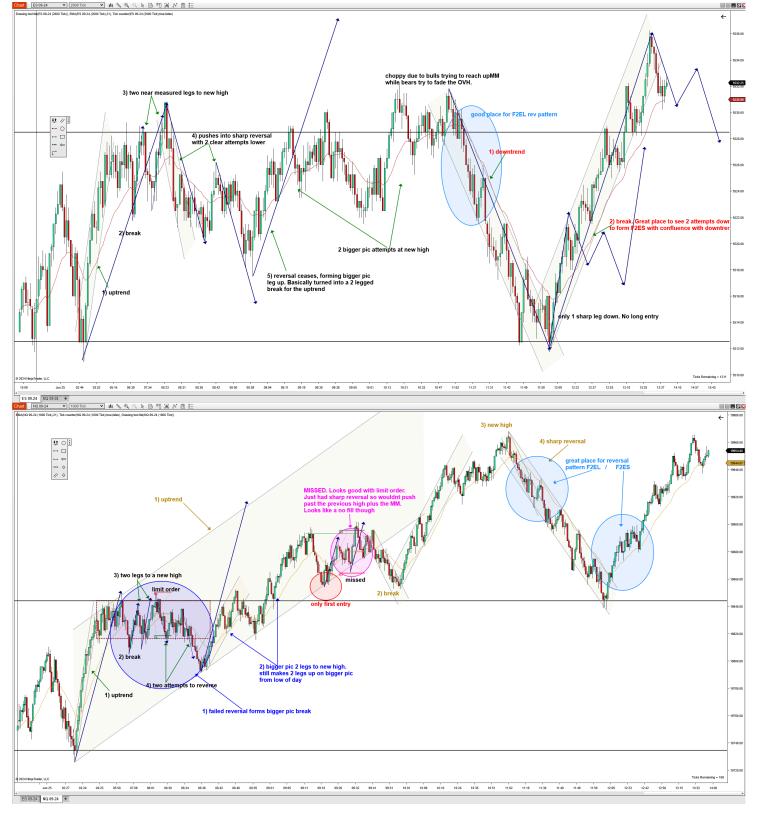

Have a great day everybody. A video is uploading at the moment so I hope y'all enjoy that when I publish it.

For the ES I'm wanting to just get a couple legs up retesting the OVH for a short entry to make a new low for the downtrend. On the NQ, we are fading back into the OVH. If we push off to the upside then we could form a big pic F2ES, which could setup the 2nd big pic attempt down for the downtrend so we'd have confluence. Have a great day everybody.

Today was kinda dead on the ES until the very end. I missed the trade at the end as I was focusing on the NQ. The NQ was great today way better than the ES.

Today was a bit slow with the setups. There were a couple good ones on the NQ but the 2nd one I missed out on but it would been a no fill anyway. On the ES I didn't like anything enough to take today but we could soon get a 2 legged retest of the OVH.

Have a great day everybody. On the ES I took a loss which should have been obvious not to take. I didn't draw my MM down and blanked on the fact it was right into the level. Combined with the fact that the 2nd leg up was pretty small didn't help. However on the ES we could very soon push into a F2ES reversal pattern to hold on the previous MM level. Same for the NQ, we just need room to the trendline for the wider downtrend.

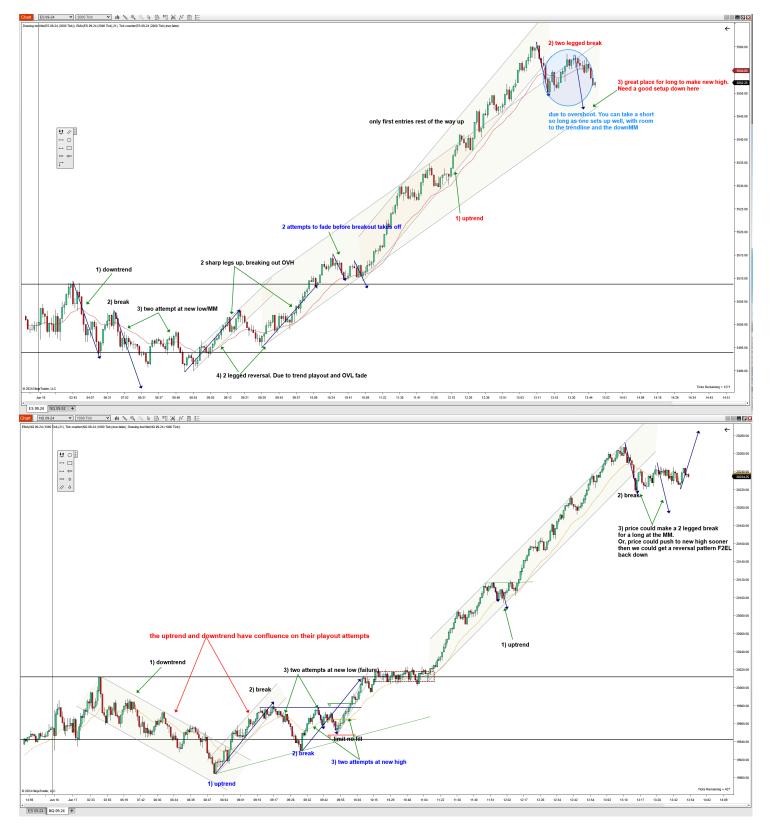

I got a YT video uploading right now. On the ES we are fading back into the OVL at the moment and on the NQ we are pushing off MM to upside. On both markets we can look to get a long trade to make a new high for the wider uptrend break. Both could push into big pic F2ES entries soon after a good push up.

Have a great day everybody. We could very soon get a short trade on the NQ. A f2el is forming with confluence from the previous uptrend so watch that area. We did just get a major reversal so we'll need a clear bullish rejection before entering. Could get a strong push off the trendline and get a bigger pic attempt at new high as well.

I liked that short on the ES as 2 big MM were met at the same spot, while overshooting the uptrend and expecting fade. Got a clear bearish reaction and had room for 1:1 to the other side of the uptrend. We could soon push into a full reversal pattern F2EL.

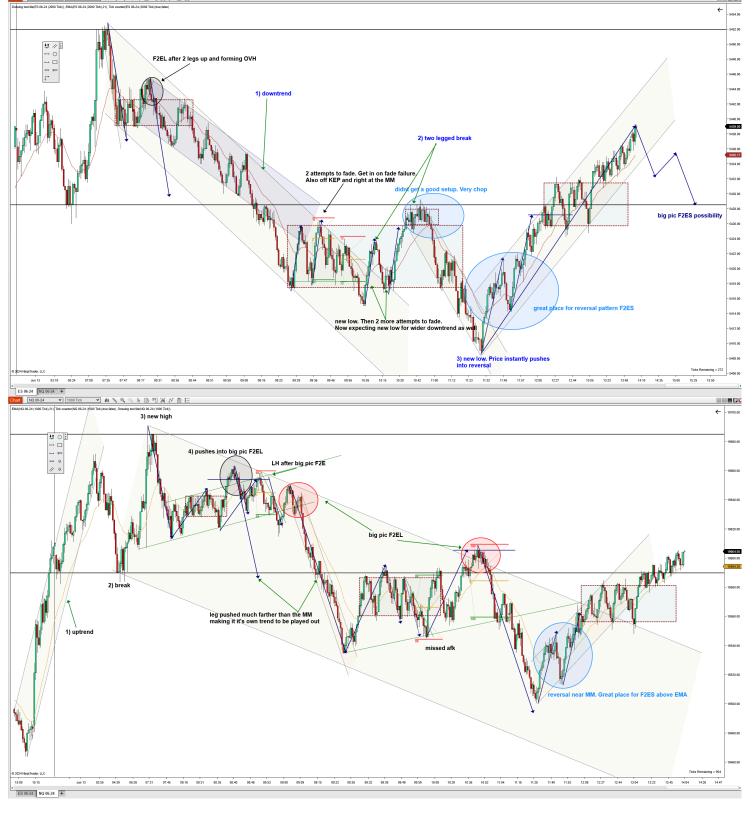

Hi everyone. I'm uploading a video to the website at the moment. It's taking a bit longer than YouTube but it'll be out soon. Today was definitely a slow day for both markets. I have the no fill but nothing else for me. There is a bank holiday coming up on Wednesday so no trading then. Have a great day everybody.

We could soon get a large reversal pattern fading back down into the OVH on the NQ soon. We've got 2 major legs up for the day. Have a great weekend everybody. I'll see y'all on Monday.

Today was a decent range day. I'm hoping the huge F2EL sets up on either market soon. Could get a good short up there. Retest of OVH on a F2EL

Have a good day everybody. Video is released so I hope y'all enjoy that as well as the eod. We could easily make a big pic F2ES holding back on the OVL on the ES pretty soon so wathc out for that. I've got it drawn out in the post. I'll see you all tomorrow!

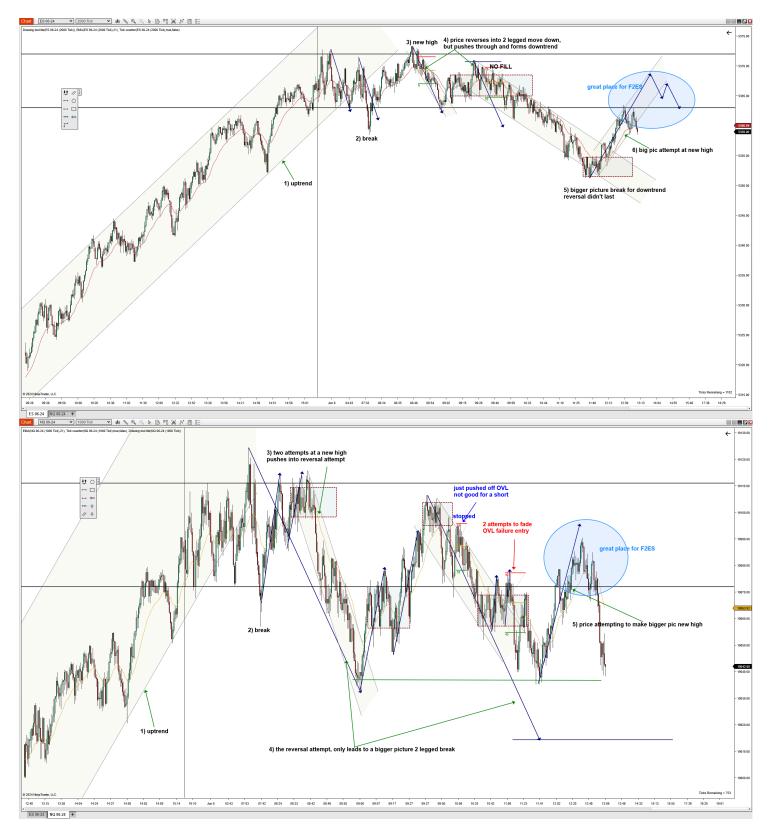

I hope y'all had a great trading day. At the moment we have an active upMM on both markets. On the NQ price could easily form a short setup at the range high as it will also meet the MM right there. Could get a short on the spot, or price could form a F2EL pushing off the high.

I hope y'all had a good trading day. I didn't quite see anything I liked on the ES. A lot of first entries on the way up. Could still get a good F2E soon though for a long. On the NQ, the big pic context looks alot better for the F2ES since it's at an even bigger pic F2E setup. There was a 2nd entry on the NQ on the way up that didn't set up perfect, but ended up getting a good bar. Have a good day everybody.

Today was a pretty good day. I hope y'all have a great Tuesday. I'm going to get around to some questions from previous days from earlier posts later tonight.

I hope y'all had a good trading day. Today felt quite choppy on both markets but still pretty clear. Not too surprising as it's basically a range day. Price was making a big picture break from yesterdays uptrend on both markets.

Both markets have a clear high swing right at the market open. I kept my ES OVH there, but lowered my NQ OVH due to the way price reacted to each level on it's own market. NQ had clear pullback to the previous swing level and price was clearly trying to fade, whereas on the ES it had much better reactions from the high swing and almost none from the lower swing. I just don't want anyone getting confused about that. I hope y'all have a great day. I'll see y'all tomorrow

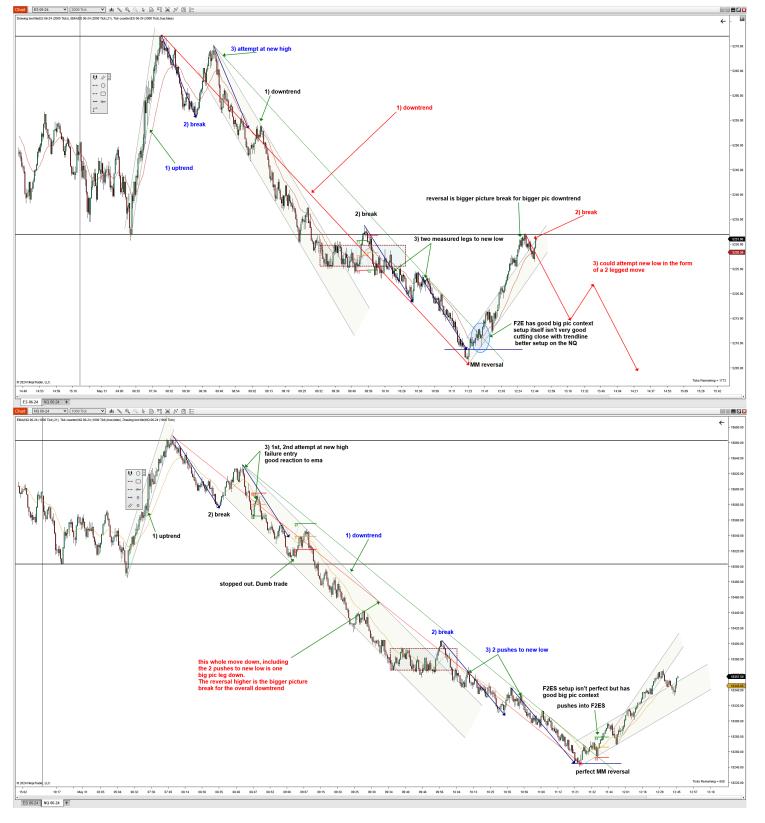

Sorry I couldn't get this out yesterday, just made it this morning. Have a good trading day everybody!

I hope y'all had a good day. Just got the video released. We could soon push into a F2EL while expecting big picture new low for the large downtrend.

On the ES we could easily push into a F2EL reversal pattern. We have 2 legs up to the OVH, and have a sharp bearish reaction. This is a great place for a reversal pattern. On the NQ, we are nowhere near the OVH but we are still getting a good push down. We could still form a good F2EL for a short.

On the NQ where I was stopped out. I was taking it like a 2 legged retest of the OVL. I overlooked the fact I was entering right into the previous MM level. Also it was just a little HL that didn't even set up well. Was also considering we just made the 3rd bounce off the OVL, so a triple test, but we did get a clear reaction to the previous MM before the trade so this was a a pretty bad entry.

I hope y'all had a great day. On the ES there was a little F2EL that formed off the double top that formed at the MM. WEasn't very clear but it was small pic with good big pic context so it looks fine to ride to the lows, but I'm not sure if price would have scooped a limit order as I was afk at the time.

Hey y'all I hope you had a good trading day. On the ES we are pushing back above the previous MM level so this is a good place to catch a reversal pattern F2ES. Ideally holding on the level. The NQ however still has a major down MM in play, but is spiking up, so we could soon get a OVL retest opportunity for a short.

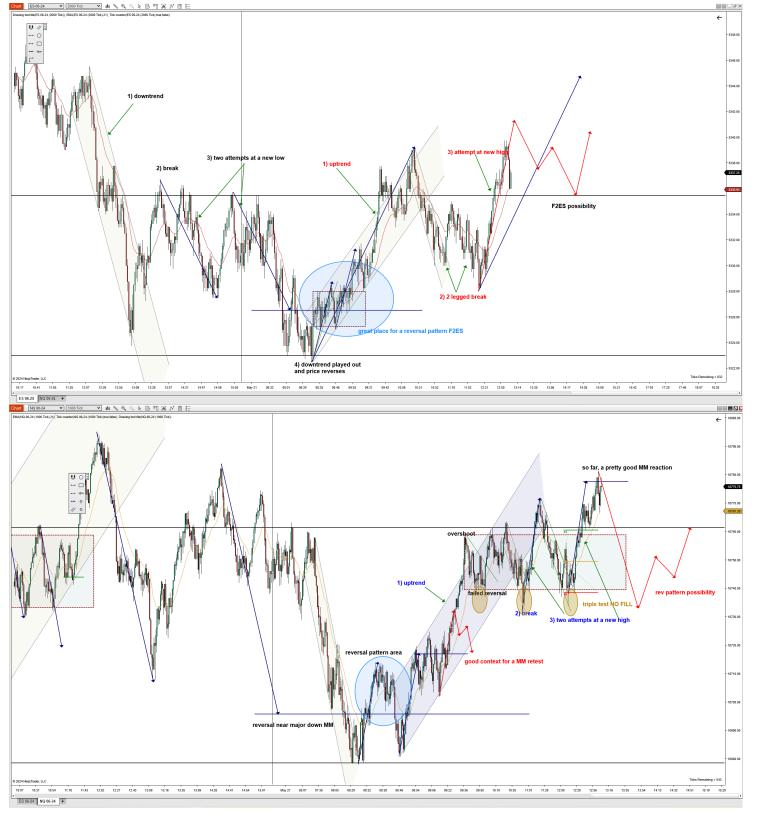

Small overshoot trade on ES but with good big pic context. Just met the major downMM so we could get a reversal pattern up soon. Could offer us a great big pic F2ES. I'll add the NQ EOD to this post in a sec after I make it.

I hope you're all doing good. We could get something soon on the ES as we could soon get a 2nd leg down which the 2 legged move would act as a big pic 2nd attempt at the larger MM that's in play. I'd like to see it hold on the channel and dotted range.

I hope you all had a great trading day. The ES is still a lot slower than the NQ. On the NQ I liked that short coming off the OVH. Especially because of the uptrend form the previous day playing out so we could expect a reversal anyway. There was a wider TL blocking the entry barely but we had such big pic context I didnt worry about it. Could make a 2nd big pic leg down, and therefore catch an OVL fade before it happens so watch out for that soon.

I hope you all had a great trading day. I was unable to get into anything today. There was a TT on the NQ right before that last push up. Now we could easily reverse and fade the OVH since we've reached the MM and broken out, so a short setup could occur soon.

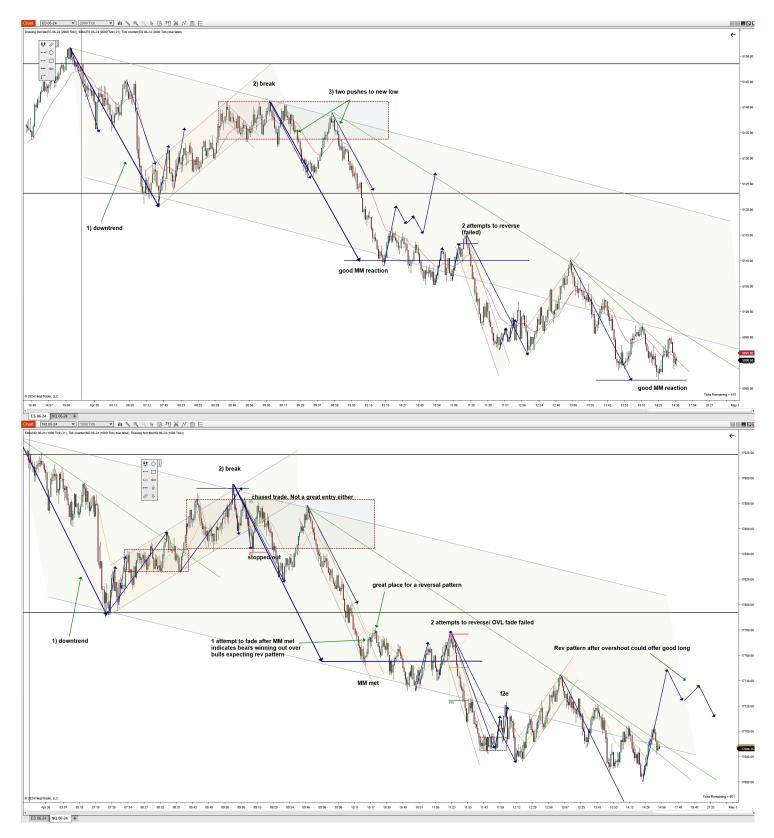

Just had quite a big push down on the NQ. We could make a very big pic reversal pattern F2ES soon looking to fade back in to the OVL. I wouldnt be surprised if price makes an F2ES that holds on that previous MM level just before the OVH. If one sets up there you wouldn't wanna push target into the OVH but we could get a smaller setup. Ideally we just fade all the way back in and make the rev pattern on top of the OVL.

Nothing on the ES for me. Just some NQ action. On the NQ, price had made an uptrend that got a break, and 2 legs attempting a new high at the OVH. Then a sharp bear bar back into the OVH. A big pic F2EL that's confluent with the previous uptrend. Now price has overshot the downtrend and we are coming off the OVL so we could get a long entry soon.

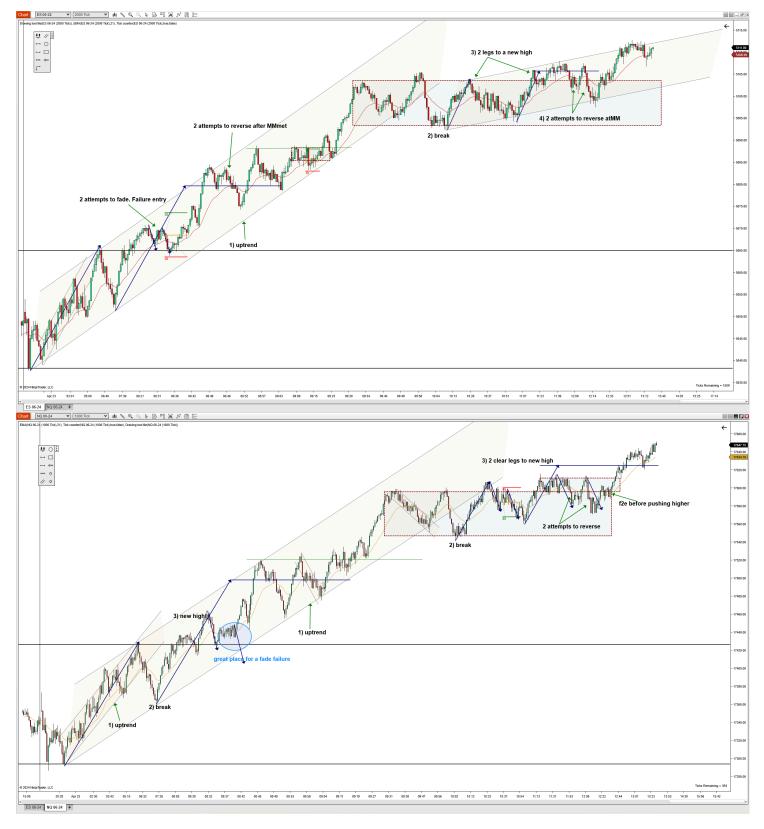

I hope you all had a great trading day. Notice on the ES, on the no fill LMT order, the major upMM had just been met. Price had 2 small legs trying to reverse. Price had a very sharp reaction to the dotted lows and shot up. It does look good to attempt with a limit order because you don't wanna enter into a major MM level like that. You want to get out before it. The limit would need to be very far back in this case, so just no trade here.

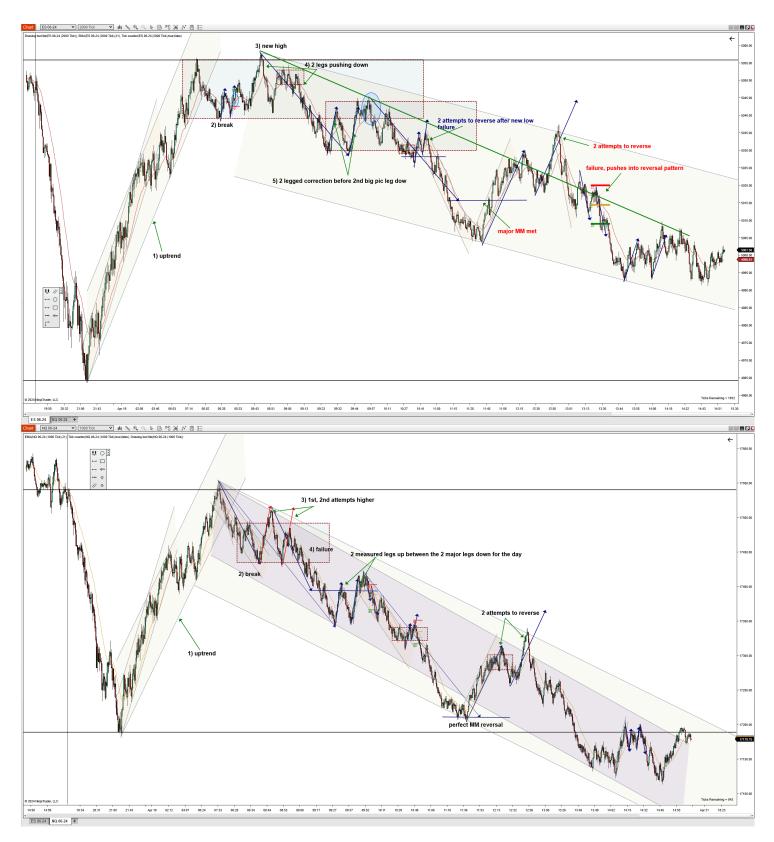

No Content

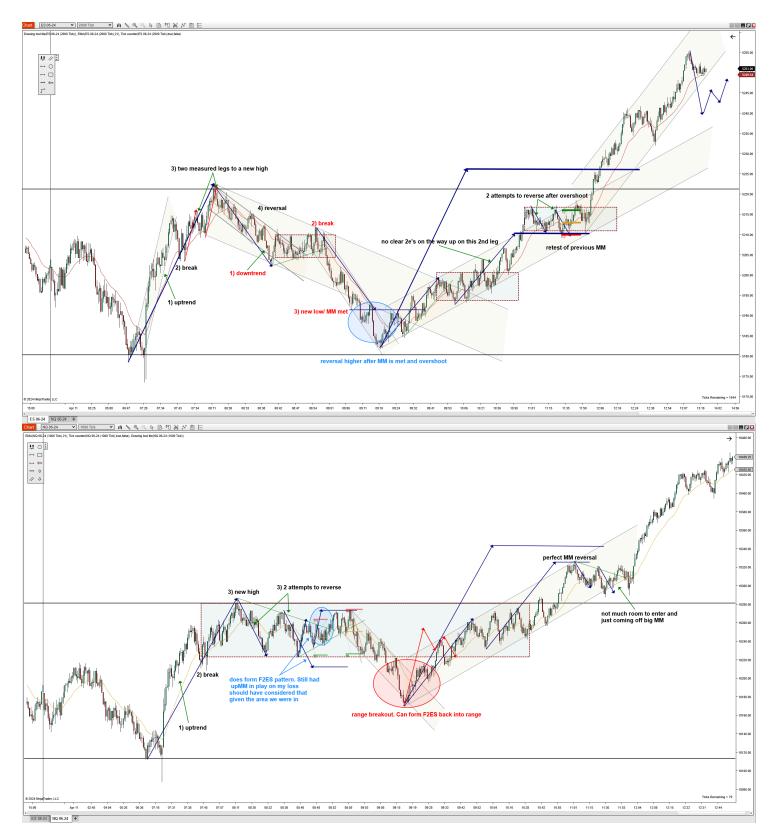

Hope y'all had a great day. I hope this helps you see the bigger picture. I'll see y'all tomorrow.

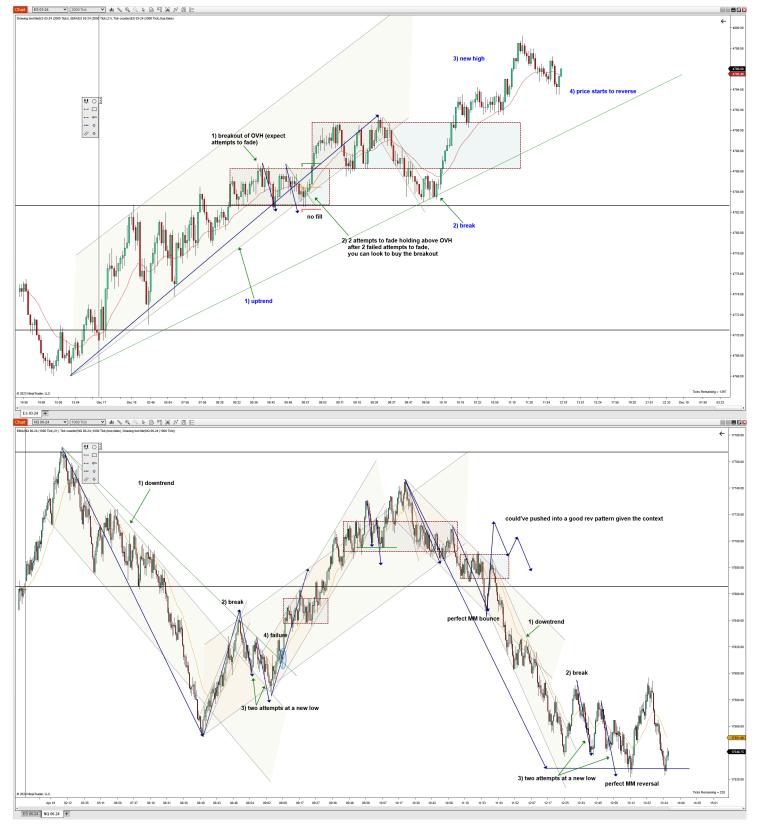

Hope y'all have a good one. Getting an NQ video out later. See y'all tomorrow.

No Content

Hey y'all I hope everyone is doing good. No NQ video today, however I will make a video of todays PA for NQ over the weekend. Have a great one everybody, enjoy the EOD post.

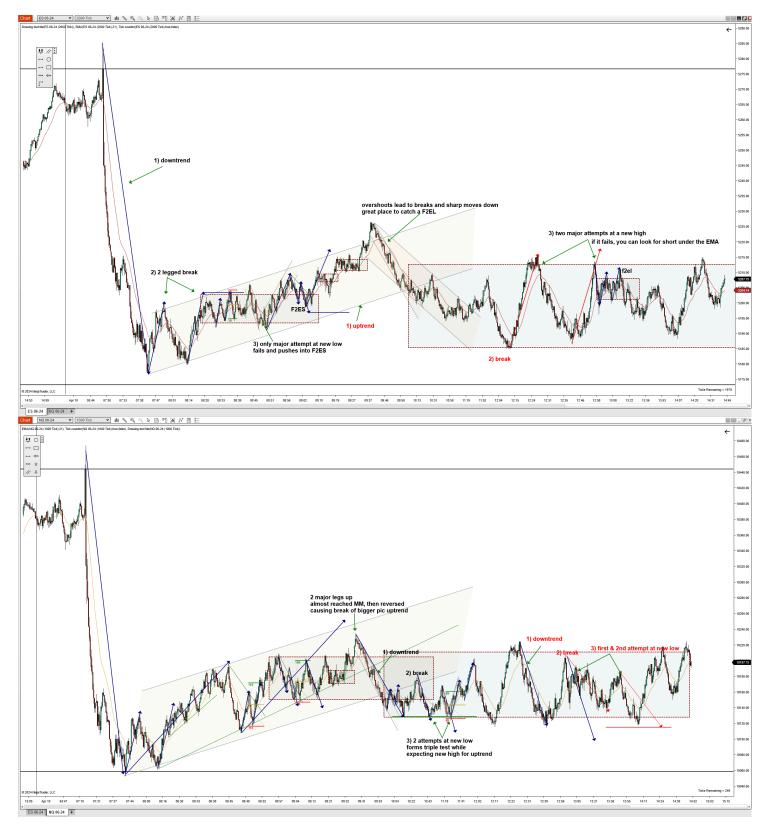

Have a great day y'all. We're pushing off this major MM level right now on the NQ and we could form a big pic rev pattern soon off of it. I'll see y'all tomorrow.

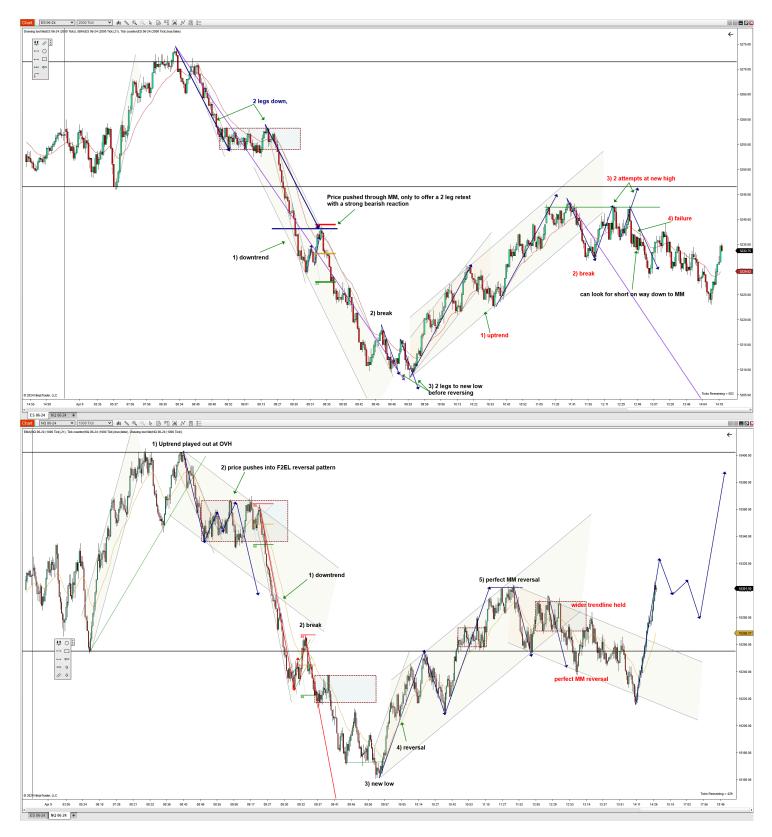

Hope y'all had a great day. I'll see y'all tomorrow.

Sorry the post is so late y'all. There's construction being done on my house right now and I had to talk with them for a bit. I was planning on making an ES video but the time slipped away today. Enjoy the NQ video.

Have a great day everyone. I'll get the NQ video out later.

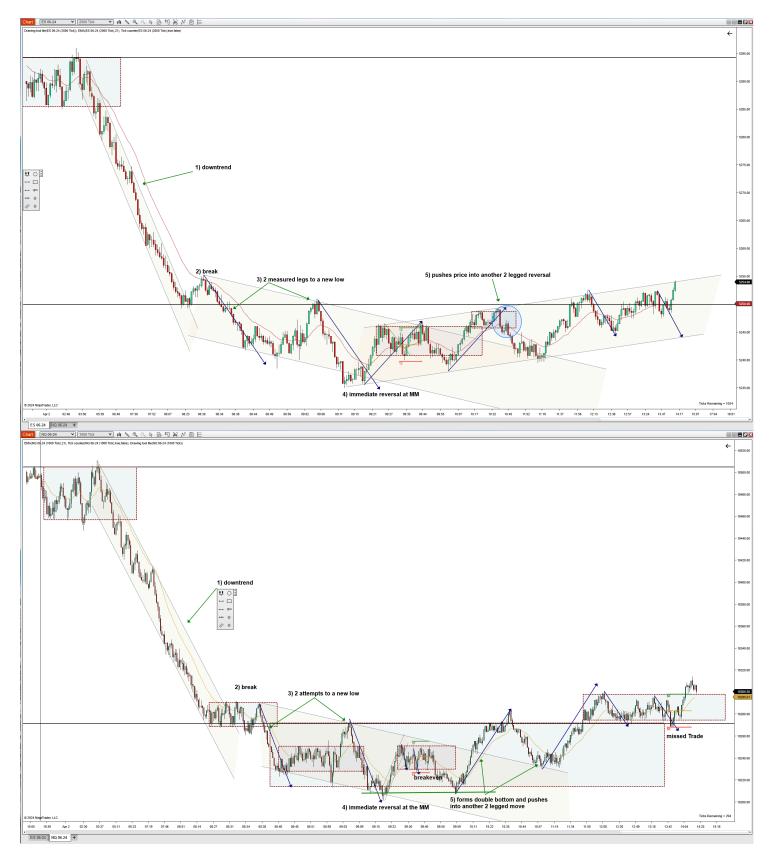

I hope y'all have a great day. Today was an exciting day to trade. I'll see you all tomorrow.

Enjoy y'all. I hope you got to see the eclipse it was incredible.

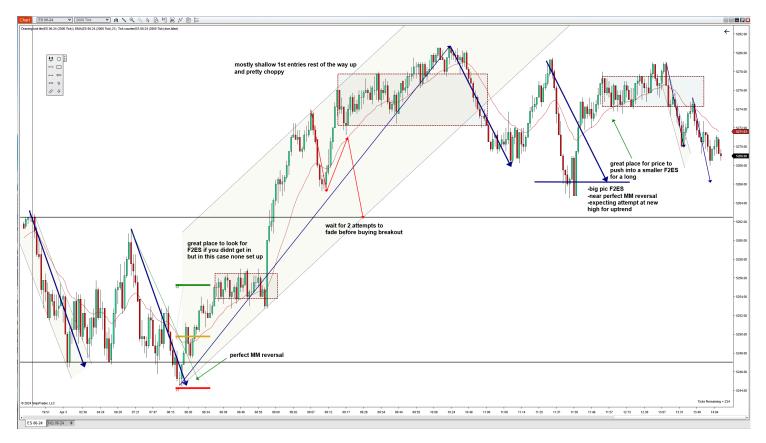

NQ video is out. ES video is uploading. I'll see you guys tomorrow.

The ES and the NQ actually followed each other pretty closely today. I've looked through a whole lot of days comparing the ES and NQ, sometimes their prices follow each other very close the whole day, sometimes they diverge from one another, and some days seem to have no similarities. Today it was pretty close at first but as time went on it slowly got out of sync.

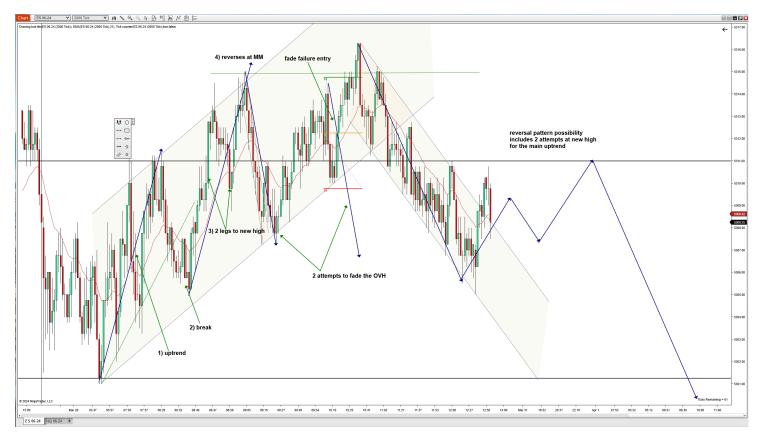

Well the market sure sold off. Have a great day everyone, I'll see you all tomorrow.

Just got the video out. I might make one for the NQ as well. I hope this post helps you see the big pic structures. Have a good day everyone.

I hope you all had a great trading day. I enjoyed trading the NQ. I'm definitely going to continue that. The NQ was of course a bit better today. Have a great one everybody, I'll see y'all tomorrow.

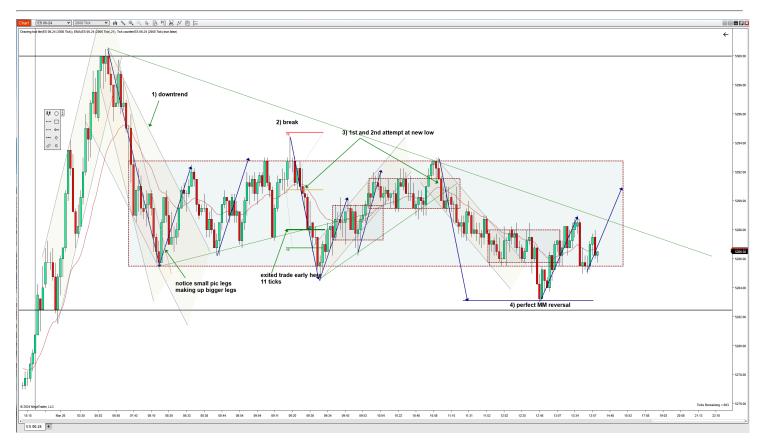

Got the video uploading right now. I've been looking at the NQ more lately and I can easily watch 2 charts at a time anyway now. I'm gonna be trading it at the same time as the ES for a while as it has been slow on the ES lately anyway. I noticed many of you in the Discord trade the NQ at the same time as ES so I'd love to share what I'm doing on that market as well. Holiday tomorrow, I'll see y'all next week.

No trades today. Was really wanting a long entry on that 2nd major leg up but after finding that resistance it kinda just shot up really fast without a good entry. It was an F2ES but even with a limit order there was no chance because after it

triggered it shot up so fast. Have a great day everyone.

Video is uploading. I hope it helps out. I really want the market to speed up overall, but we've still had some good days lately. Have a great day everybody.

Not as much to go over today. Basically the whole day was setting up this trade that finally occurred lol. Video is uploading right now, I hope today helps you see the big pic structures easier.

Hey y'all I've got the video uploading right now. Sometimes the market can feel slow but you really only need to get at least 1 trade per day consistently. The more the better of course, but with good RR you don't need to take so many trades to be very successful. Have a great day y'all, and if you're still trading, watch out for that possible reversal pattern that's forming. Great place given the downtrend played out and we're going very bullish so far.

I hope y'all had a good trading day. Video just got released, hope you enjoy. I'm thinking a big pic reversal pattern could form soon. Possibly retesting the OVH as I drew out, we'll see what happens later.

Video is uploading right now. I hope this and the vid help out. Right now price is pushing off the OVL so we could push into a F2ES reversal pattern soon so look out for that. I'm out for the day, I'll see you guys tomorrow.

I hope this chart helps. Sorry for not getting these EOD out as often as I should have. Been some family things recently which needed me to stop trading early on a lot of days which would stop me from doing anything with PT for the rest of the day. I hope to soon get back to 5 videos per week on YouTube. I'll get a couple out this week. I know that starting in a few days I'll have more time on my hands again and the videos will be more consistent, again I'm shooting for 5 a week again. Just wanted to clear that up a bit as I have been less active with PT lately. Y'all have a great day, I'll see you all tomorrow.

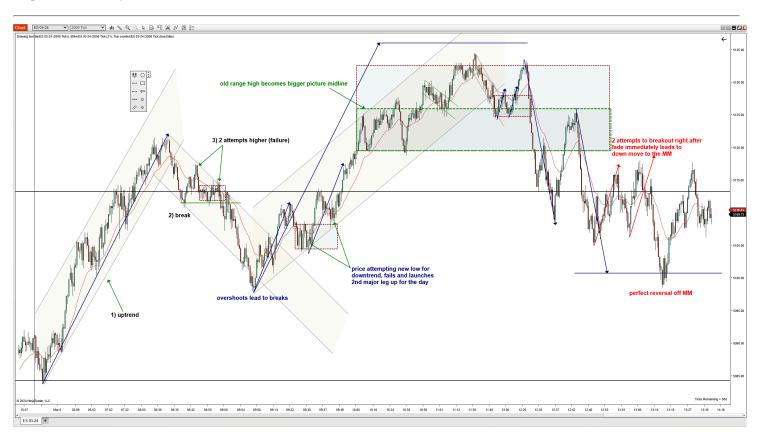

The last trade at the end that I marked I didn't take. I wasn't paying attention to the chart at the time it was after I made the video. It does look like a good reversal trade and it had a strong bullish reaction right when the downMM was met. Have a good day everybody, I'll see you on Monday.

Hey everyone I hope you've had a good trading day. I got stopped out on this first trade, I should have known not to push it that far given it was a pretty small pic, but I was expecting a 2nd leg down attempting to retest the OVH so it looked alright for 1:2. It does still look good for 1:1 or a bit more as long as theres room to the support that I overlooked. I hope this chart helps you see the PA better. Have a good one everybody.

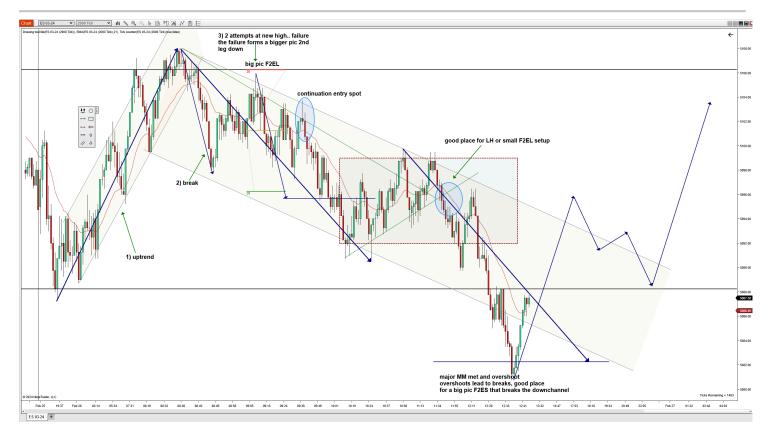

Today had great price action. I hope y'all have a great day. The video is uploading right now I hope you enjoy and find it helpful. I will see you all tomorrow.

Video uploading right now. I hope this post helps you see the bigger picture. Today I did not take any trades. I missed something at the end though. There was a small trendline in the way but the setup was very big picture and great context. I hope some of y'all got in. I'll see you tomorrow.

Today clearly shows PA getting bigger pic as the day goes on. I hope this post helps you see it in real time. 2 legged breaks from a channel can become 1 bigger picture leg as more PA forms. Thus becoming 1 leg in a bigger picture 2 legged break, as shown in this post. Today wasn't the best trading day for me other than practicing patience. Have a good day everybody.

I hope this post helps. Today was a bit slow so hopefully it moves a bit faster tomorrow. I'm waiting around to see if this reversal pattern I've drawn out occurs or something similar. We're in a great place for a reversal but after the downtrend breaks it'd still need it's 2 attempts lower so the F2ES needs to be big pic enough.

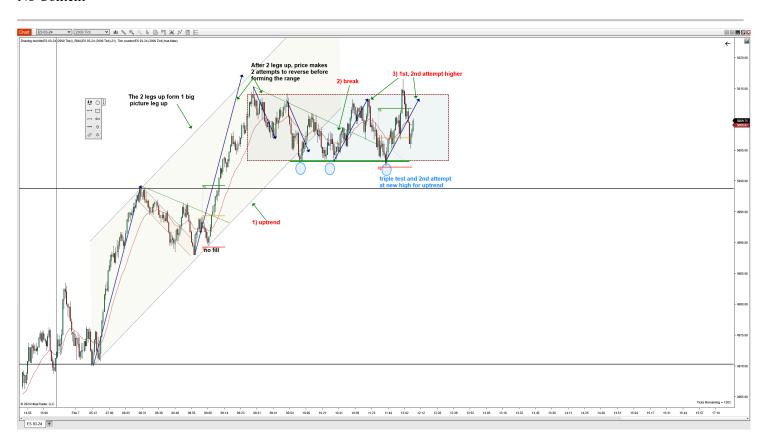

Hope y'all had a great trading day. The setups felt kinda sparse today, only liked 1 after all. Notice how important the MM levels are, the major MM from today was met after many hours and still reversed instantly after reaching it.

Video is uploading. Today has some great examples of the PA getting bigger pic as more time goes on. This post goes through that. I hope y'all had a great trading day. I'll see y'all tomorrow.

No Content

Nice triple test. 2nd attempt at new high for the uptrend. I hope some of y'all got this as well. Had really good big pic context. I hope this EOD post helps out. I'll see y'all tomorrow.

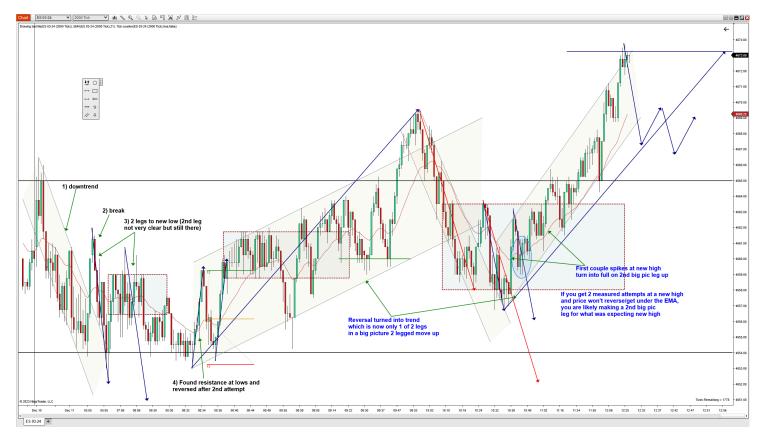

I just realized I accidentally left the OVH level too high on the earlier post. I only moved it there for a sec but forgot about it all day. Luckily price never went up too much but I probably would have caught it earlier had that happened.

Here's the EOD chart for y'all. I'll see you guys tomorrow. I am taking off for winter vacation on Wednesday, so I'll be here tomorrow, but then I'm off til after Christmas. Have a good one everybody.

Hey y'all I just realized the EOD posts have slipped my mind for a few days sorry about that. I was a little disappointed how my trade didn't go further, I get it there was a small upMM in play but it was a big pic trade and I thought to see it test the high, but still played it safe.

Just met the major upMM. Could form a reversal pattern similar to what I've drawn out here. Price will definitely be more attracted to the OVH magnet now that the upMM was met.

I've circled a couple measured move areas. Price didn't full on reverse at these areas but had a clear reaction both times so it shows their importance as key areas. Hope y'all had a good trading day. See y'all on Monday.

Today was pretty slow. Could still get 2 legs down to the KEP, which would also be a fade of the dotted range.

I hope y'all had a good trading day today. Video is uploading right now and I forgot to talk about the 2 attempts to reverse (the bright blue arrows) but it's important to spot it. It's pretty choppy but still there, and is most likely the cause for the sharp push down after it.

Video is uploading at the moment. I go into some possibility of what could happen next near the end. Anyway, I hope y'all had a great trading day, and I'll see ya tomorrow.

Pretty slow day today. Hopefully a faster day tomorrow. I'm thinking we could form a big pic F2ES as shown in this photo. Video is out and I elaborate on it a bit more.

Today is a good learning day for very big picture stuff. Notice what I've drawn out with the red arrows showing very big pic attempts. After the 2nd big pic attempt down, it failed which launched the huge uptrend that formed.

I hope y'all had a good trading day. In the video I said I was done, but I'm gonna stick around for maybe another half hour to see if we can get a push up into this big pic F2EL. If anything important happens I'll do another update later.

Just a range day today. Wish I got filled on that long near the end of the day. We're off the OVH right now and the dotted range high so we could still form a reversal pattern down for a short. Would need room to that green trendline working up.

The uptrend has 2 attempts at a new high. Ideally could get a reversal pattern after this.

Not much to go through in this post. The whole day is just a big F2EL.

Well we could get 2 legs to the KEP before completing this MM up. Could offer a good long entry.

Could get a long soon, a failed 2nd entry reversal off this OVL. Got 2 legs down after the downtrend break and would be the 2nd attempt at new high for the uptrend break.

Just reversed off the major downMM. Goes to show just how important measured moves are. We could easily push into a F2ES soon and have a great reversal into the range.

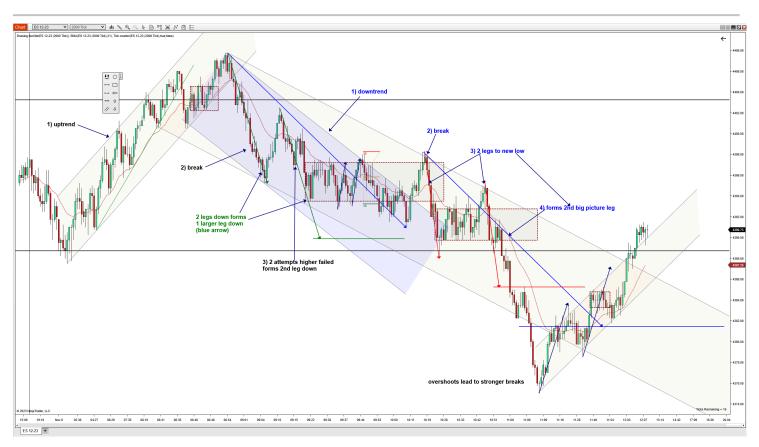

1 trade day. Was hoping a good long would setup near the end of the 2 legged break from the uptrend.

Here's todays wrap up. Looks like price is attempting to reverse off that MM but having trouble getting through the OVL, we could get a F2ES with room to the OVL for a long still.

This huge blue upchannel is a single leg on big picture. Also shot way past that MM so it's its own trend at this point and can be played as such. Could get a 2 legged break, ideally retesting the other channel high. This would be a big pic F2ES to make a new high for the uptrend.

A slow day again today. Hopefully this post helps you spot larger structures forming in real time. It demonstrates attempts/failures forming bigger pic structures.

Video's uploading at the moment. We could soon start to get a 2nd major leg down. Possibly get a F2EL below the EMA with the expectation of a OVH retest (forming big pic 2legged break from the uptrend).

Today was pretty slow. I hope tomorrow it picks back up, painful day today lol.

Similar to yesterday but a bit smaller. Uptrend with a break and push to a new high. Basically just 2 big pic legs up for the whole day.

Not much really happened today. Was basically just an uptrend, break, 2 legs to new high on very big picture. Not as much to mark on this EOD post here. Could still get a big pic 2 legged break from the uptrend, so we'll see how price reacts to that OVH level. The whole day is 1 leg on a big picture, so we'll see if tomorrow we launch into a 2nd leg up.
